

EMTS System Changes

The following EMTS system changes are planned for upcoming releases of the EMTS.

Version 2.0 – Tentatively scheduled for release in April 2012

- New QA check to prevent companies from reporting both RIN Price and Gallon Price. Users may only enter RIN Price **or** Gallon Price when trading RINs.

Version 2.1 – Tentatively scheduled for release in August 2012

- Match the amount of data provided in a document to the frequency of generation for that document. This change applies to the Completed Trade, Expired Trade, and Canceled Trade documents. For example, a “daily” Completed Trades document would contain one day’s worth of data (e.g., yesterday’s data). All “3 per day” documents would contain all trades completed that day up until the time when the document is generated.
