

VII. Disbursement of Federal Offshore Revenue

Total disbursements of OCS revenue since 1955 amount to \$109 billion (see table 79). About 79 percent of total disbursements of OCS revenue has gone to the U.S. Treasury General Fund. However, in 1995, only about 67 percent of OCS revenue, about \$2.4 billion, went directly into the U.S. Treasury General Fund. In addition to this fund, MMS distributes OCS revenue to the Land and Water Conservation Fund (LWCF), the National Historic Preservation Fund (NHPF), and coastal States. In 1995, about 25 percent of OCS revenue went into the LWCF.

In accordance with Section 8(g) of the OCSLA Amendments of 1978, coastal States must receive some of the revenue from the leasing and development of offshore areas that contain oil and gas fields that straddle Federal and State jurisdictional boundaries.

Because the States and the Federal Government could not reach an agreement on a formula for dividing these revenues, the subject monies went into a Section 8(g) escrow fund beginning in August 1979. Revenues from the Beaufort Sea in Alaska went into a second escrow fund under Section 7 beginning in December 1979.

Congress resolved the dispute in the OCSLA Amendments of 1985, Public Law 99–72. The law provides to the States the following distribution of Section 8(g) funds:

- Escrow funds to be disbursed in FY 1986 and 1987;
- A series of annual payments disbursed to the States between FY 1987 and 2001; and
- Recurring annual disbursements of 27 percent of royalty, rent, and bonus revenues from Section 8(g) leases.

Congress passed a second law, Public Law 100–102, to distribute the Section 7 Beaufort Sea escrow funds to the State of Alaska in FY 1988 (see table 79). In 1995, MMS disbursements to the States amounted to \$75.5 million.

As amended, the LWCF Act of 1965 requires the National Park Service, since 1978, to keep at least \$900 million in the LWCF each fiscal year (FY). Before FY 1978, the amount was \$300 million. Money for the LWCF comes from surplus property sales held by the General Services Administration, motorboat fuel taxes collected by the U.S. Treasury, and recreation use fees collected by the U.S. Department of the Interior and the U.S. Department of Agriculture. Any difference between these combined receipts and the \$900 million total is made up from OCS revenue.

Since 1971, OCS revenue has provided more than 70 percent of LWCF monies, and in some of those years more than 90 percent (see table 79). In 1995, the LWCF received \$896 million.

The States and Federal Agencies use LWCF grants to buy parks and recreation areas and to help plan, acquire, and develop land and water areas for recreation use. Since 1965, the LWCF has distributed about \$3.2 billion to States and \$5 billion to Federal Agencies.

Revenue from Federal offshore mineral leases sustains the NHPF. The National Historic Preservation Act of 1986, as amended, limits OCS revenue payments into the NHPF to \$150 million. The Act specifies how annual appropriations of the NHPF support matching grants to the States and Territories and to the National Trust for Historic Preservation. Each State or Territory in turn must award 10 percent of its annual NHPF allocation to certified local governments as subgrants. Projects funded by the NHPF include, among others, the following:

- Identifying and nominating properties to the National Register of Historic Places (NRHP);
- Protecting NRHP-listed properties and districts affected by federally funded or licensed construction projects;
- Reviewing and recommending to the NPS historic preservation certifications under the Economic Recovery Tax Act of 1981; and
- Setting up rehabilitation standards for public or private properties.

Table 81 shows the amount of monies distributed by the LWCF and NHPF to the States and U.S. Territories and Possessions in FY 95.

¹ Does not include Federal share of escrow interest: State payments do. Interest accrued for the time bid deposits are held in escrow pending fair market determination and other bid acceptance criteria.

² Transition quarter which resulted from a change in the end of the Federal Government's FY from June 30 to September 30.

³ Since 1988, Alaska's payment includes 27% from part of a disputed Federal/State boundary area in the Beaufort Sea. Part of the disputed area was in the 8(g) zone and Alaska received \$320 million from escrow for this area in 1988.

⁴ Increase is due to a 1986 Budget Reconciliation Act increase in the settlement payment from \$19.5 million to \$45.5 million.

¹ Before FY 77 the Grant Program operated under a no-year appropriation from General Revenue (the Preservation of Historic Properties Account). Then the Historic Preservation Fund was created, funded by OCS revenue, with 2-year appropriations.

² Includes additional funds for Federal administration costs for Federal Land Acquisition and State Grants.

³ Transition Quarter, July 1, 1976, to September 30, 1976, because of adoption of new FY calendar

⁴ Includes \$10 million deferred from FY 1980 to FY 1981.

⁵ Beginning with the FY 1981 appropriation, National Historic Preservation Fund program administration costs (\$1.54 million in 1981) were separated from the grants-in-aid appropriation.

⁶ Includes \$25 million appropriated by the Emergency Jobs Act (P.L. 98-8)

⁷ The FY 1988 included \$1 million for the Bicentennial Lighthouse Program, and \$750,000 for a Micronesian Study

⁸ The FY 1989 also included \$1 million for the Bicentennial Lighthouse Program.

⁹ The FY 1990 included \$1 million for the Bicentennial Lighthouse Program as well as \$473,000 for grants to Native American Tribes, and \$600,000 for Disaster Relief.

¹⁰ The FY 1991 included \$721,000 for grants to Native American Tribes.

¹¹ The FY 1992 includes \$938,000 for grants to Native American Tribes.

¹² The FY 1993 includes \$1,487,000 for grants to Native American Tribes.

¹³ The FY 1994 includes \$2 million for grants to Native American Tribes.

¹⁴ The FY 1995 includes \$2 million for grants to Native American Tribes and 1.5 million for Historical Black Colleges.

NOTE: The total awarded to date for the National Trust is \$93,463,713.

I. Federal Offshore Lands

The Submerged Lands Act (SLA) of 1953 grants the States rights to the natural resources of the submerged lands from the coastline to no more than 3 nautical miles (5.6 km) into the Atlantic, Pacific, the Arctic Oceans, and the Gulf of Mexico except the coastal waters of Texas and western Florida, where State jurisdiction extends from the coastline to no more than 3 marine leagues (16.2 km) into the Gulf of Mexico. The SLA also reaffirmed the Federal claim to the Outer Continental Shelf (OCS), which consists of those submerged lands seaward of State jurisdiction.

The SLA led to the passage of the Outer Continental Shelf Lands Act in 1954 (OCSLA). The OCSLA and subsequent amendments in 1978 and 1985 provide for Federal jurisdiction over the submerged lands of the OCS. Additionally, it authorizes the Secretary of the Interior to lease those lands for mineral development. Note that the legal OCS includes submerged lands that are not part of the geological OCS.

On March 10, 1983, U.S. President Ronald Reagan signed Proclamation 5030 (3 CFR 22), which set up the U.S. Exclusive Economic Zone (EEZ). The EEZ consists of those areas adjoining the territorial sea of the United States, the Commonwealth of Puerto Rico, the Commonwealth of Northern Mariana Islands, and U.S. overseas territories and possessions. The EEZ extends up to 370 km (200 nmi) from the coastline. About 15 percent of this area lies on the geologic continental shelf and is shallower than 200 m (656 ft). Another 10 to 15 percent lies on the continental slope and rise, between 200 and 2,000 m (656 and 6,562 ft) water depth. The remaining 70–75 percent is abyssal plain where water depths reach 3,000–5,000 m (9,843–16,405 ft).

Leasing of Federal lands and their subsequent development have made the OCS a major source of the Nation's supply of crude oil and natural gas. Offshore operators also produce salt and sulphur from OCS leases, and investigations continue into the possibility of the OCS becoming a source of other nonfuel minerals (i.e., sand and gravel, phosphorite, manganese, gold, tin, titanium, and platinum).

The Oil Pollution Act of 1990 (OPA 90) gave the Secretary of the Interior authority over offshore facilities and associated pipelines, with the exception of deep-water ports, for State and Federal offshore waters. The Secretary in turn delegated this OPA 90 authority to MMS. The resulting tasks for MMS include the following:

- enforcing spill prevention measures,
- reviewing spill response plans,
- inspecting spill containment and cleanup equipment,
- reviewing spill financial liability limits, and
- certifying spill financial responsibility.

While the OCSLA and OPA 90 define MMS jurisdiction and regulatory responsibility on Federal offshore lands, other Federal laws play a significant role in the management of offshore operations. Some of those laws are the

- National Environmental Policy Act of 1970 (NEPA) - The NEPA requires a detailed environmental review before any major or controversial Federal action.
- Clean Air Act of 1970 (CAA, reauthorized in 1990) - The CAA regulates the emission of air pollutants from industrial activities.
- Coastal Zone Management Act of 1972 (CZMA, reauthorized in 1990) - The CZMA requires State review of Federal action that affects the land and water use of the coastal zone.
- Clean Water Act of 1977 (CWA) - The CWA, through the issuance of National Pollutant Discharge and Elimination System permits, regulates the discharge of toxic and nontoxic pollutants into the surface waters of the U.S.
- Federal Oil and Gas Royalty Management Act of 1982 (FOGRAMA) - The FOGARAMA requires that oil and gas facilities be built in a way that protects the environment and conserves Federal resources.
- Marine Mammals Protection Act of 1972 (MMPA) - The MMPA provides for the protection and conservation of all marine mammals and their habitats.
- Endangered Species Act of 1973 (ESA) - The ESA requires a permit for the taking of any protected species. It also requires that all Federal actions not significantly impair or jeopardize protected species or their habitats.

Table 1 shows the areal extent of both the State offshore waters and the Federal OCS. The MMS divides the Federal waters of the OCS into four regions: the Atlantic OCS, the Gulf of Mexico OCS, the Pacific OCS, and the Alaska OCS. Table 2 gives the areal extent of the EEZ.

II. Offshore Leasing Activity and Status

The OCSLA as amended authorizes the Secretary of the Interior to lease OCS lands for mineral development. Leasing activity in 1995 included two sales in the Gulf of Mexico (GOM) Region. Sales were not held in other OCS regions. Leasing activity will continue with 4 lease sales in portions of 4 planning areas between 1996 and 1997 under MMS's Comprehensive Program as approved in July 1992. For the remainder of the program, annual lease sales are scheduled for the Central and Western GOM planning areas. One sale has been scheduled for the Beaufort Sea in the Alaska OCS Region¹.

Through 1995, the U.S. Department of the Interior has offered more than 1.13 billion OCS acres (457 million ha) for lease in 117 lease sales. In those 117 lease sales the oil and gas industry paid about \$57.1 billion in bonuses to lease 77.0 million acres (31.2 million ha). Table 3 shows the OCS leasing history by year.

In 1995, sales 152 and 155 in the Central and Western GOM, respectively, attracted 1,228 bids, which resulted in 835 leases covering 4.3 million acres (1.74 million ha). This acreage leased represents 7.3 percent of the acreage offered for lease in Sales 152 and 155. Total bonuses accepted for these two sales amounted to \$414 million. The average bonus per acre leased was \$104.88 for Sale 152 and \$76.27 for Sale 155. Expected first year rentals from these two sales total \$21.7 million.

Tables 4 through 7 present leasing statistics for individual sales, and table 8 provides a regional breakdown of leasing acreage and status. The GOM is the most successful of the OCS areas. Through 1995, GOM lease sales produced about 82 percent of total leases and 77 percent of the bonus monies. At the end of 1995, there were 24.8 million acres² (10 million ha) in active lease status.

¹ The MMS canceled or delayed many of the sales scheduled for Alaska, Mid-Atlantic/South Atlantic, and Eastern Gulf of Mexico.

² Sale 155 leases (9/13/95) are not yet in this total.

1995	<u>2</u>	<u>10,991</u>	<u>835</u>	<u>59,699,680</u>	<u>4,341,665</u>	<u>414,007,620</u>	<u>7.3</u>
Total²	116	298,291	14,980	1,129,155,674	77,019,302	57,124,932,472	6.8

¹ The 1982 data for 5 oil and gas lease sales account for the first part of Sale 69 as 69–1 and the 1983 data account for the second part as 69–2. Thus, there were 8 bid openings but only 7 offshore oil and gas lease sales recorded for 1983.

² This total does not include lease issuance data here for the Pacific phosphate sale held December 15, 1961, because 6 awarded leases (30,240 acres) were subsequently "terminated at the convenience of the Federal Government." The action followed discovery of unexploded naval missiles on the ocean floor of the 6 tracts on the southern California OCS. All bonuses (\$122,000) were returned to the lessees and are not totaled as revenues.

NOTE: This table and tables 4 through 7 summarize, by calendar year, 113 Federal offshore lease offerings that were held from October 1954 through August, 1993. They include 93 oil and gas, 3 sulphur (1954, 1965, and 1969), 2 salt (1960 and 1967), phosphate (1961), and 1 sulphur and salt (1988) lease offerings.

¹ Only the offering and bidding data for this phosphate lease sale are totaled here since the awarded leases were subsequently terminated and all monies were returned to the bidder/lessees.

² In Sale 53 (May 1981), Chevron USA and Phillips Petroleum jointly paid the highest per-acre bid so far, of \$65,014.16 on Lease No. OCS-P 0450 in the Santa Maria Basin. Altogether, the tract's 5,131 acres brought in \$333,596,200 of the total accepted bonus payments of \$2,088,881,824. In the same sale, high bidders afterwards relinquished leasing rights to 12 other tracts, thus forfeiting one-fifth or \$41,081. Bids for 9 other tracts were rejected as insufficient. The average bid per acre was \$6,516.21 on 320,567 acres. As adjusted, totals for this sale also reflect leases for 5 tracts issued in 1984, previously delayed by litigation.

³ In Sale 73 (November 1983), litigation delayed the scheduled bid opening until December of that year.

NOTE: *PH* indicates a phosphate lease sale, *P* indicates a Pacific area sale, and *RS* indicates a reoffering sale.

¹ In Sale 83, bids were received on 17 tracts that were in an international dispute with the Soviet Union. On December 4, 1988, the Federal Government decided that it was not in the United States' best interest to accept the bids and rejected all bids in this disputed area. The 17 tracts on 96,784 acres for \$108,174,000 are included under *Bids Made*.

² In Sale 87, bids were received on 4 tracts that are involved in an international boundary dispute with Canada. Data are included under bids made (acres bid on, total exposed, high-bids submitted) for these 4 tracts covering 22,773 acres for \$5,104,000. These bids were not accepted or rejected, and the one-fifth bonus bid amounts were deposited in an interest-bearing account pending a decision. On June 12, 1992, the one-fifth bonus bid amounts plus interest were returned to the bidders upon their request, as provided for in the Notice of Sale.

³ In Sale 97, bids were received on 16 tracts that are involved in an international boundary dispute with Canada. Data are included on bids made (acres bid on, total exposed, high-bids submitted) for these 16 tracts covering 87,359 acres for \$3,313,300. These bids were not accepted or rejected, and the one-fifth bonus bid amounts were deposited in an interest-bearing account pending a decision. Five years from the day of bid opening, the bidders may elect to withdraw the bonus deposits together with accrued interest, as provided for in the Notice of Sale.

⁴ Sale 92, originally scheduled for January 1986, was held October 11, 1988, after the lifting of a preliminary injunction prohibiting the opening of bids. The MMS ordered SOO's beginning October 1, 1989 and renewed these on a yearly basis resulting from DOI appropriations acts whose language included Congressional moratoria on leasing, exploration, development, and production activities in the North Aleutian Basin. An out-of-court settlement (undisclosed) was reached through alternative dispute resolution. As part of this settlement, all North Aleutian Basin leases were relinquished.

Table 7. Gulf of Mexico OCS Lease Offerings, 1954–1995 - *continued*

- ¹ Sale 36 had a two-part bidding system: 10 tracts (51,515 acres) were offered in a royalty bidding system, 287 tracts (1,370,031 acres) were offered in a high bid-bonus system. Of these, 8 tracts (40,755 acres) were bid and let on the royalty system for an average \$25 per acre (\$1,018,875 in bonuses); another 149 tracts (693,172 acres) were bid on the high-bid system with 136 let (634,832 acres) for an average \$2,248.22 per acre (\$1,427,242,455 in bonuses).
- ² The 1982 data for 5 oil and gas lease sales account for the first part of Sale 69 as 69–1 and the 1983 data account for the second part as 69–2. Thus, there were 8 bid openings but only 7 offshore oil and gas lease sales recorded for 1983.
- ³ In Sale 74 (August 1983), two of the high bidders failed to execute leases on time and had to forfeit their one-fifth bonus deposits.
- ⁴ In Sale 94 (December 1985), one high bidder did not execute 5 awarded leases of 43 on time and, therefore, forfeited the one-fifth bonus deposit of \$1,231,200.
- ⁵ Sale S/S is the sulphur and salt sale.
- ⁶ In Sale 141 one high bidder failed to execute the lease and forfeited the one-fifth bonus deposit.
- ⁷ In Sale 142 one high bidder failed to execute the lease and forfeited the one-fifth bonus deposit.
- ⁸ In Sale 150 lessees failed to execute the leases (7) and forfeited the one-fifth bonus deposits.
- ⁹ In Sale 152 lessees failed to execute the leases (4) and forfeited the one-fifth bonus deposits.
- ¹⁰ In Sale 155 lessees failed to execute the lease and forfeited the one-fifth bonus deposit.

NOTE: Sulphur lease sales have **S** after the sale numbers and salt lease sales have **SA**. **PH** indicates a phosphate lease sale; **P** indicates a Pacific (area) sale; **RS** indicates a reoffering sale. Two-part sales either have **A** and **B** or **1** and **2** after the sale numbers and were accounted for as separate sales, with the exception of Sale 69.

Table 8. Summary by OCS Region of Federal Lease Offerings and Lease Status, 1954–95

¹ Under Supervision indicates all producing and nonproducing offshore mineral leases for which the DOI had responsibility as of December 31, 1993.

² The DOI has held 2 reoffering sales in offshore oil and gas lease areas: RS–1 reoffered 175 tracts (996,308 acres), Alaska; RS–2 reoffered 140 tracts (785,091 acres), Alaska; 155 tracts (882,444 acres), Mid-Atlantic; 232 tracts (1,320,819 acres), South Atlantic; and 27 tracts (153,716 acres), Northern and Central California. See table 3 for bidding and bonus details.

III. Offshore Development Activity

The Gulf of Mexico (GOM) OCS Region has the highest level of permitting and drilling activity. The number of permits issued for collecting geologic and geophysical (G&G) data is shown in table 9. Tables 10, 12, and 14 show the yearly record of OCS drilling activity, zone completions, and producing acreage, respectively. Tables 11, 13, and 15 show OCS drilling activity, zone completions, and producing acreage by regional area, respectively.

The number of G&G permits issued on the OCS in the latter half of the 1980's was less than 75 percent of the total issued in the first half of the decade. This trend continues in the 1990's with a total of 107 in 1995. Drilling activity in 1995 decreased by almost 6 percent to 798 wells drilled compared to 845 in 1994. Production of oil and gas occurs on about 8 percent of the acreage originally offered for lease.

While drilling activity decreased in the GOM OCS Region, there was a net increase of 62 production facilities in 1995, for a year end total of 3,891 (see table 17). The Pacific OCS Region, the only other producing OCS area, removed one facility in 1994 and has 23 (see table 16). About 50 percent of OCS production facilities are between 0 and 32.2 km (0 and 20 mi) of shore (see table 18). Over 80 percent of these facilities are found in less than 50 m (164 ft) of water (see table 19).

Tables 20 and 21 show pipeline mileage in the western and central GOM and offshore California. Collectively, pipelines transport almost 95 percent of OCS oil and 100 percent of OCS natural gas. The growth in pipeline mileage in the GOM has been steady throughout the last decade, reaching a total of almost 23,000 miles of pipeline.

Table 9. Permits Issued for Geologic and/or Geophysical Exploration on Federal Offshore Lands, 1960–95

[These calendar year data count only G&G permits issued; permit extensions are not reported in this tabulation.]

¹ Shut-In Oil, Gas, or Undetermined Hydrocarbon (U.H.) completions are those temporarily taken out of production pending either repairs or major or minor workovers. Until 1974, calendar year reports did not distinguish such restorable but producible zone completions that are shut-in and left "standing due to drilling on platforms, planning for secondary or other injection projects, delay in facilities (installation), well plugging by sand or (those) other mechanical problems, pressure depletion, or having an excessive oil/gas ratio."

² Other Than Producible Zone Completions includes those service completions drilled for injection/withdrawal, salt disposal, or similar purpose. These have been reported separately since 1964.

³ All injection, service wells, etc.

⁴ Not Restorable (oil or gas) completions are judged not capable of production and are to be plugged and abandoned (P&A) and permanently sealed.

¹ Gas lift pipeline.

NOTE: All offshore facilities (with the launch dates) reported here are located in Federal waters with the exception of Platform Hope (1979) and Platform Eva (1983), shown above in parentheses, which are in State waters. Altogether, Federal leases offshore California are serviced by 299 kilometers (185.89 statute miles) of pipeline.

IV. Offshore Production of Crude Oil and Natural Gas

Table 24 show Federal OCS oil and natural gas production as a percentage of total U.S. production. The role of Federal OCS oil and natural gas production as part of total U.S. production has increased steadily since 1954. By 1971, Federal OCS crude oil and natural gas production stood at 11.8 and 12.4 percent, respectively, of the Nation's total. Since 1971, OCS crude oil as a percentage of total U.S. production has remained stable — ranging between 8.8 and 12.9 percent before reaching an all-time high of 15.3 percent in 1994. Production of OCS natural gas as a percentage of total U.S. production has continued to rise since 1971, reaching an all-time high in 1990 of 27.4 percent before dropping to 23.7 percent in 1994.

Tables 25 through 36 compare Federal OCS production to offshore production in State waters. The States producing hydrocarbons in adjacent offshore waters are Alaska, Alabama, California, Louisiana, and Texas. There is no oil or natural gas production on the Federal OCS offshore Alaska.

The Federal OCS accounts for about 80 percent of offshore crude oil and 88 percent of natural gas production. In 1994, Federal production of crude oil and condensate was 37, 74, 93, and 95 percent of total offshore production for Alabama, California, Louisiana, and Texas, respectively. For Alabama, California, Louisiana, and Texas, Federal offshore production is more than 34, 88, 96, and 94 percent, respectively, of total offshore natural gas production.

Tables 37 and 38 present a ranking of operators by field size in Federal offshore waters. There are 119 operators producing crude oil or condensate from Federal OCS leases and 123 producers of natural gas. Of these, the top ten operators produce about 72 percent of OCS oil but only 52 percent of OCS natural gas. The number of producing operators has continually increased since 1983. Most of these operators produce from leases in the Gulf of Mexico. On the Pacific OCS, there are 6 crude oil and natural gas producers.

Table 37. Natural Gas: Producing Operators in 1994

Map of the Pacific Ocean showing OCS locations. The map includes the Gulf of Mexico, Central America, and the Pacific Ocean. OCS locations are marked with numbers 1 through 6. A legend indicates that 1-6 represent OCS locations. A scale bar shows 0 to 1000 km. A north arrow is present.

VI. Revenue from Federal Offshore Leases

Revenue contributions from Federal leases of adjacent States are shown in table 63. Annual and cumulative mineral revenue from the OCS mineral leasing program are shown in table 64. Revenue by commodity is shown in tables 65 and 66. The OCS mineral leasing program generates revenue from the following sources:

- Bonus bids paid on tracts at lease offerings;
- Annual rental payments on leases not in production;
- Minimum royalties assessed on producible leases that are not actively producing;
- Shut-in payments on producible gas wells closed temporarily because of mechanical, safety, or other problems; and
- Royalties paid on sales of crude oil, condensate, natural gas, oil lost, gas lost, gas plant products, sulphur, and salt.

The major sources of OCS revenue are bonuses, and oil and natural gas royalties, which accounted for 93 percent of total OCS mineral revenue in 1995. Royalties paid for crude oil, condensate, and natural gas were the top contributors to OCS revenue in 1995. Crude oil, condensate, and natural gas royalties made up 78 percent of total OCS mineral revenue in 1995, with natural gas royalties being responsible for 41 percent of total mineral royalties.

In 1995, lease sale bonuses totaled about \$414 million, which was about 14 percent of OCS revenue. This was about four times the combined contribution of rental payments and minimum royalties. Over the life of the program, bonuses have played a much larger role, generating 51 percent of OCS mineral revenue since 1953, compared to 47 percent from crude oil, condensate, and natural gas royalties.

Tables 67 through 78 show annual OCS revenue generated by adjacent State or planning area. Leases offshore Louisiana have generated more revenue than any other State both in 1995 and over the life of the program. In 1995, OCS leases offshore Louisiana generated 76 percent of total OCS revenue. Since 1953, OCS leases offshore Louisiana have been the source of 66 percent of total OCS revenue.

Footnotes at end of table.

Table 64. All Coastal States: Annual and Cumulative Mineral Revenue and Sales Value from Federal Offshore Leases, pre-1954-95 — *continued*

-
- ¹ Royalties for condensate are included in the oil and gas royalties. Data for condensate are reported separately in Section V. (Federal Offshore Oil and Natural Gas Sales Volume and Royalties).
- ² Other Mineral Revenue includes the 1960-91 royalties for gas lost (\$13,974,637), oil lost (\$136,094), sulphur (\$68,126,448), gasoline and LPG (\$542,208,495), and salt (\$174,287).
- ³ No monies from Sale PH (12/15/61) are reported as Federal revenue in this table (See table 3).
- ⁴ Escrow funds distributed to the State of Louisiana and lessees, pursuant to decrees of the U.S. Supreme Court, are not deducted from the Cumulative Mineral Revenues reported in this table.
- ⁵ Federal Percent Share is the Federal Government's share of the mineral revenues from the competitive leasing and private development of Federal oil and gas and other leases on the OCS. The percentage figure represents Cumulative Mineral Revenue divided by Cumulative Sales Value. Sales value for royalty purposes means the mineral's monetary worth at the time of its production, not its current sale price.
- ⁶ As adjusted, this 1981 figure now includes \$10,846,000 paid in 1984 for leases on five tracts. Timely issuance of those leases was held up, pending resolution of litigation.

¹ These royalties include \$718,124 paid for gasoline and LPG, \$67,125 paid for gas lost, and \$1,668 for sulphur.

² The 1981 bonuses reported here include payments of \$10,846,000 from Sale 53 for five leases that could not be issued until 1984 because of litigation. In the same sale, certain bidders relinquished their rights to lease 12 other tracts and forfeited \$41,081,734 or one-fifth of the \$205,408,672 they had bid for those tracts.

V. Federal Offshore Oil and Natural Gas Sales Volume and Royalties

Annual crude oil and condensate sales volumes are shown in tables 37 and 38. These two tables also give data on the sales value and royalties received from the sale of these commodities. Table 39 gives totals for crude oil and condensate. Natural gas sales volumes are shown in table 40. Crude oil and condensate sales peaked in 1971 at 418 million barrels (MMbbl) and decreased steadily to 277 MMbbl in 1980. In 1981, sales began rising again and reached a 2-year peak of 389 MMbbl in 1985 and 1986. Sales decreased through the latter half of the 1980's, before rebounding in 1992, reaching 409 MMbbl in 1995. Natural gas sales on the OCS hit an all-time high in 1990 of 5.1 Tcf. In 1995, OCS natural gas sales totaled 4.7 Tcf.

Royalties collected are a function of sales volume and current crude oil and natural gas prices. Therefore, the peak years for sales volume and royalty collections do not coincide. Royalties from the sale of crude oil and condensate peaked in 1984 at \$1.8 billion; this was 86 percent more revenue than in 1971, the peak year of production. Also, natural gas royalties hit a high of \$2.1 billion in 1984. This was 26 percent more revenue than in the peak production year of 1990.

Between 1954 and 1976, royalties from crude oil and condensate provided more than 50 percent of OCS production royalties. In 1977, natural gas royalties exceeded crude oil and condensate royalties for the first time. In 1995, natural gas royalties totaled \$1.2 billion, accounting for 55 percent of OCS production royalties. Since 1954, natural gas production generated over \$28 billion in royalties, which amounts to about 55 percent of the total.

Tables 42 through 62 show offshore oil, natural gas, and sulphur sales volumes and royalty statistics for Federal leases adjacent to Alabama, California, Louisiana, Mississippi, and Texas. Submerged lands offshore Louisiana produce the most oil and natural gas of any Federal OCS area. Therefore, production highs and lows for offshore Louisiana closely follow total Federal OCS production. In 1995, Louisiana, Alabama, and California were the only OCS producers of sulphur. The only directly mined deposits of sulphur are offshore Louisiana. Alabama and California sulphur production is a byproduct of crude oil and natural gas production.

Royalty rates for OCS resources range between 12.5 and 16.7 percent of sales value, with most leases at 16.7 percent. One exception involves net profit share leases (NPSL) introduced in the early 1980's. Under NPSL lease terms payers must report the sales volume and sales value from a lease but do not owe a profit share payment until aggregate lease revenues exceed costs. In 1995, payers reported about 1.4 percent of oil and 1.5 percent of natural gas sales volume from NPSL's on which profit share payments were not due. Although the percentage profit share ranges up to 50 percent for existing leases, no NPSL's reached a profitable status until 1988, and only a few profitable leases existed in 1995. Most OCS resources remain subject to customary royalty rates.

In 1995, royalties as a percentage of sales value were 15.7 percent for natural gas and 15.1 percent for oil. Since 1953, the averages for natural gas and oil royalties as a percentage of sales value are 16.3 and 16.1 percent respectively.

IX. Oil Pollution in U.S. and International Waters

Table 82 lists pollution spills on the OCS that are greater than 1 barrel. In 1995, there were 35 spills on the OCS from facilities or operational activity on Federal leases. These incidents resulted in the release of 774 bbl of pollutant (i.e., crude oil, condensate, refined product, mineral oil, diesel, or natural gas) into offshore waters. Three of those 35 spills released more than 50 bbl. In 1995, there were no spills of 1,000 bbl or greater from OCS facilities or operations (see table 83).

Table 84 lists the number of blowouts from offshore wells. In 1995, there was one blowout during exploratory drilling in the GOM and there were none during production operations. Over the last 25 years, of the 24,237 wells spudded on the OCS, there have been 151 blowouts, less than 0.7 percent of the total. Between 1970 and 1995, the total spillage from OCS operations amounted to 122,076 bbl of pollutants. This spillage is less than 0.002 percent of the oil produced from OCS facilities.

Table 85 reports on the number of crude oil and refined petroleum product spills of 1,000 bbl or more from tankers in coastal and offshore waters worldwide since 1974. In 1995, there were 7 such tanker spills, which released 68,959 bbl of oil. None of these spills occurred in U.S. coastal and offshore waters (see table 86).

The information on spill incidents from OCS facilities comes from a database file maintained by MMS headquarters and each regional office. Information on tanker spills comes from MMS's Technical Analysis Group (TAG) in the Environmental Policy and Programs Division. All the spills in the TAG database must be from a vessel — usually a tanker or barge — that carried a petroleum product as cargo. The spill may be cargo or fuel from the carrier and must be at least 1,000 bbl in size.

An MMS contract established the worldwide tanker spill database in 1983. Since 1983, TAG has maintained and verified the database in-house. The TAG adds U.S. Coast Guard data annually. Additional information comes from the Institut Français du Pétrole tanker database for the years 1974–87 and the *Oil Spill Bulletin* for events during 1986 and 1987. Current information usually comes from the *Oil Spill Intelligence Report* (OSIR), *Golob's Oil Pollution Bulletin*, newspaper accounts, and various reports concerning oil-spill events.

The most recent updates to the database include OSIR's *1995 International Spill Statistic Summary* (March 1996) and data from the U.S. Coast Guard's Marine Safety Information System database.

¹ Two of the drilling blowouts occurred during drilling for sulphur.

² One blowout occurred during abandonment operations.

³ Two of the drilling blowouts occurred during drilling for sulphur.

⁴ Two of the drilling blowouts occurred during drilling for sulphur on the same well.
