

Environmental Justice

Key Resources for Building a Community of Practice for Local Use Planning

2014

ACKNOWLEDGMENTS

Many individuals and agencies were involved in the creation of this document. The document's principal authors and project managers were Samantha Phillips Beers, Erin C. Sullivan, and Reginald Harris from EPA Region III.

Much of the research and initial information for this document came from the work of Patricia Salkin from the Touro College Jacob D. Fuchsberg Law Center, and other members of the workgroup, including individuals from federal government, state government, and academia. These non-EPA contributors include:

Melissa Collier, Mississippi Department of Environmental Quality

Megan McConville, National Association of Development Organizations

Edith Pestana, National Environmental Justice Advisory Council (NEJAC) member, Connecticut Department of Energy and Environmental Protection

Amy Simes, North Carolina Department of Environment and Natural Resources

The following also served as peer reviewers for the document:

Members of the Local Government Advisory Council (LGAC)

Members of NEJAC, particularly:

Charlie Chase

Michelle Moore

Deidre Sanders

Nicky Sheats

BACKGROUND

ENVIRONMENTAL JUSTICE

The U.S. Environmental Protection Agency (EPA) defines “environmental justice” as the fair treatment and meaningful involvement of all people regardless of race, color, national origin or income with respect to the development, implementation and enforcement of environmental laws, regulations and policies.

Supporting environmental justice is important to the current and future health of a community, as it offers an opportunity for residents to communicate their needs and desires. In doing so, residents may have greater pride and ownership in their community, as well as opportunities for greater economic and social success.

[Plan EJ 2014](#) (the Plan) is a roadmap that will help EPA integrate environmental justice into the Agency’s programs, policies, and activities. Plan EJ 2014 is named in recognition of the 20th anniversary of President Clinton’s issuance of Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations.

In implementing the Plan, EPA will seek to meaningfully engage with communities and stakeholders.

The goals of the plan are to:

- Protect health in communities over-burdened by pollution
- Empower communities to take action to improve their health and environment
- Establish partnerships with local, state, tribal and federal organizations to achieve healthy and sustainable communities.

Plan EJ 2014 is **not a rule or regulation**. It is a *strategy* to help integrate environmental justice into EPA's daily activities.

LOCAL LAND USE PLANNING

Strategic planning is an important part in the overall health of a community. When local governments, industry, and the citizens work together there are an array of advantages to the overall success and pride of a community. Planning, siting, and permitting are essential processes to the development and redevelopment of towns and cities across America, whether it is a small, rural town or a large, urban city.

The combination of land use planning and environmental justice is a natural fit; when environmental justice concerns are part of the planning process, relationships are formed, value is added, and there is a better sense of cooperation.

INTENDED USE

This document was created in partnership with EPA and environmental justice professionals from a variety of backgrounds including federal, state and local government and academia. This group researched and created an informational resource to assist local land use planners, community members and other interested parties to make responsible decisions when planning, siting and permitting.

The information provided is intended to inform the land use planning process, promote a collaborative decision-making process and support environmental justice. The identified resources emphasize the importance of thinking creatively in order to protect the environmental and public health of the community.

This document is not intended to provide hard-and-fast rules or provide a scripted process for linking environmental justice with land use planning; instead, it is meant to *inform* the process. This document should be consulted early in the land use planning process to allow communities to determine the best way to enhance their unique planning process.

While this document provides many useful environmental justice and land use resources, it is not meant to provide an exhaustive list of information. The document was last updated in June 2014 and will be updated

in the future to reflect new information as it is made available. For additional information or to notify EPA of a change, please contact Pat Carey at carey.pat@epa.gov or 202-566-0199.

The use of environmental justice principles in land use planning originates from a variety of resource categories and topic areas. This document identifies several of each and are described in further detail in the following several pages. First, the information is organized into five categories indicating origin of the resource: Academic Resources (Articles and Books), Federal Resources (Federal Executive Orders, Legislation and Other Resources), State Resources (State Executive Orders, Legislation and Other Resources), and Local Resources (Local Ordinances and Resources). Within each of those categories, the information is further broken down into six informational topic areas: Environmental Justice 101, Environmental Justice and Land Use: Making the Connection, Engaging the Community, Smart Growth, Case Studies, and Policy/Legislation. These six informational topic areas can be used to inform training modules and course planning, as well as provide reading and background on discrete topics.

For example, this document could be consulted to provide information to a land use planner who is interested in learning more about Smart Growth. This planner may hold community listening session to learn more about the community's needs and wants. One way to incorporate Smart Growth principles, including the creation of a more walkable community, is to look on the table for resources that are checked ("✓") with the Smart Growth indicator. These resources are located throughout the entire document and are easy to locate when following the Smart Growth column on the tables.

Additionally, a community member could use this document to learn more about the laws, regulations, and ordinances that pertain to his or her community. For example, an individual living in Hartford, Connecticut would learn that there are several Federal resources (pages 13-15), four resources from the state of Connecticut (page 18), and one resource specifically about the City of Hartford (page 25).

HOW THIS DOCUMENT IS ORGANIZED

The document presents information in a table that identifies the name of each resource and where to find it, as well as a short description of the information provided by each resource. To make it easier to find specific resources, it is organized into the following categories:

1. Academic Resources (Articles and Books)

Pages 7-12

Organized in reverse chronological order, the resources in this section are published journal articles and books that cover a variety of environmental justice and land use topics. Some examples in this section outline specific opportunities for land use decision-makers on how to best incorporate environmental justice. Other resources in this section discuss the history of various environmental justice issues in communities and the changes that have occurred.

2. Federal Resources (Federal Executive Orders, Legislation and Other Resources)

Pages 13-15

Organized in chronological order by executive order, legislation and other resources, this section contains Presidential policy directives (specifically Executive Order 12898), the National Environmental Policy Act (NEPA) that was signed into law on January 1, 1970 and EPA products. The EPA resources range from large, Agency-wide environmental justice planning (Plan EJ 2014) to guidance, memorandums and tools to examine environmental concerns in a community. These resources are useful for understanding the larger environmental justice picture.

3. State Resources (State Executive Orders, Legislation and Other Resources)

Pages 15-25

Organized by state, this section includes environmental justice executive orders that were signed by state governors, state laws and codes covering a variety of topics under land use

planning and public participation, policies, plans, websites and other planning documents. The other resources provide examples of environmental justice and land use planning practices.

4. Local Resources (Local Ordinances and Resources)

Pages 25-26

Organized alphabetically, this section contains laws found within municipality codes, and resources created and implemented at the local/municipal level of government. These resources range from information on environmental justice ordinances to alliances and networks promoting environmental justice among various parties.

The table also indicates to which of the following six informational topics each resource relates:

1. Environmental Justice 101

The history of environmental justice; federal, state, and local laws and ordinances that discuss environmental justice on a broad level; and community-based research and information pertaining to environmental justice.

2. Environmental Justice and Land Use: Making the Connection

Examples of incorporating environmental justice into land use planning; state and local laws and ordinances that discuss environmental justice and land use partnering; and other information related to the collaboration of ideas.

3. Engaging the Community

Information about public participation and how communities can be involved in the land use planning process.

4. Smart Growth

Information related specifically to smart growth and its 10 basic principles: 1) Mix land uses; 2) Take advantage of compact building design; 3) Create a range of housing opportunities and choices; 4) Create walkable neighborhoods; 5) Foster distinctive, attractive communities with a strong sense of place; 6) Preserve open space, farmland, natural beauty and critical environmental areas; 7) Strengthen and direct development towards existing communities; 8) Provide a variety of transportation choices; 9) Make development decisions predictable, fair and cost effective; and 10) Encourage community and stakeholder collaboration in development decisions.

5. Case Studies

Historic environmental justice cases and/or lessons learned from examples of environmental justice being incorporated into decision-making and land use planning.

6. Policy/Legislation

Summaries of or direct links to federal, state or local environmental and/or environmental justice laws (i.e., statute enacted by legislature), regulations (i.e., directive made and maintained to implement the authority of laws), and policies (i.e., system of laws, regulatory measures, courses of action, and funding priorities intended to accomplish certain goals) .

In addition, recurrent environmental justice and land use themes appear across the resource categories and informational topics highlighted in the guide. Each theme has a corresponding code represented in parentheses below. If applicable, the resources in the tables starting on page 6 will contain these theme codes at the end of the citation.

- **Activism (ACT)** – The act of campaigning to promote, impede or direct social or environmental change.
- **Air (AIR)** – Environmental impacts and health burdens due to poor air quality resulting from close proximity to an environmental hazard.

- **Buffering (BU)** – A sufficient zone (e.g., geographic area) or structure (e.g., sound walls) between a facilities and a community to protect the public from pollutants (e.g., noise, air, water, land).
- **Community Benefit Agreement (CBA)** – A legally binding contract negotiated between a developer and a coalition representing a broad spectrum of community members impacted by the development. In exchange for community members' support for the project, the developer agrees to provide certain benefits (e.g., funding for affordable housing and open space).
- **Demographics (DEM)** – Socioeconomic characteristics of a population expressed statistically, such as age, sex, race, national origin, education level, income level, etc.
- **Goods Movement (GM)** – Environmental pollution associated with the transportation of freight (e.g., seaports, airports, railways, truck lanes, logistics centers, border crossings).
- **Hazardous Waste Facilities (HWF)** – Facilities that treat, store, recycle, incinerate or transfer hazardous wastes from at least two producers of hazardous wastes.
- **Illegal/Open Dumps (I/OD)** – The improper disposal of any waste including household trash, tires, barrels, demolition/construction waste, appliances, metal or any material that will rust, rot or burn.
- **Industry (IND)** – Environmental and health burdens on a community associated with the zoning and operation of industrial facilities.
- **Meaningful Involvement/Decision-Making (MI/DM)** – Provides the opportunity for: people to participate in decisions about activities that may affect their environment and/or health; the public's contribution to influence the regulatory agency's decision; consideration of the public's concerns in the decision-making process; and decision makers to seek out and facilitate the involvement of those potentially affected.
- **NEPA (NEPA)** – The National Environmental Policy Act (NEPA) established U.S. policy promoting the enhancement of the environment and also established the President's Council on Environmental Quality (CEQ).
- **Public Equality (PE)** – Equal access to public goods and services as it relates to environmental justice and land use planning.
- **Public Health (PH)** – The health impacts to a community attributed to environmental pollution.
- **Public Outreach (PO)** – The act of providing information and/or services to populations that might not otherwise have access to the information/services.
- **Siting and Permitting (SP)** – The process of selecting a location and receiving the authority to construct and build a new facility.
- **Solid Waste Facilities (SWF)** – Structures or systems designed for the collection, processing or disposal of solid wastes, including hazardous wastes, and includes transfer stations, processing plants, recycling plants and disposal systems.
- **Title VI (T6)** – Actions related to Title VI of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color or national origin in any program or activity receiving federal financial assistance.
