Era	s	7stem or Period	Series or Epoch	Estimated ages of time boundaries in millions of years ¹
		Quatamany	Recent	
		Quaternary	Pleistocene	11
			Pliocene	1 -
Cenozoic			Miocene	10-
		Tertiary	Oligocene	25
		•	Eocene	40-
			Paleocene	60
	_	Cretaceous ²	Upper (Late) Lower (Early)	
Mesozoic		Jurassic	Upper (Late) Middle (Middle) Lower (Early)	
		Triassic	Upper (Late) Middle (Middle) Lower (Early)	
			Lower (Early)	
		Permian ²		
	Carbon- iferous systems	Pennsylvanian ²	Upper (Late) Middle (Middle) Lower (Early)	205
Paleozoic	Car ife. syst	Mississippian ²	Upper (Late) Lower (Early)	255
		Devonian	Upper (Late) Middle (Middle) Lower (Early)	315
	Silurian ²	Upper (Late) Middle (Middle) Lower (Early)		
		Ordovician ²	Upper (Late) Middle (Middle) Lower (Early)	
		Cambrian ²	Upper (Late) Middle (Middle) Lower (Early)	430
Prece	ambrian ²		Informal subdivisions such as upper, middle, and lower, or upper and lower, or younger and older may be used locally.	510

Terms designating time are in parentheses. Informal time terms early, middle, and late may be used for eras, periods, and epochs where there is no formal subdivision into Early, Middle, and Late. Informal rock terms lower, middle, and upper may be used where there is no formal subdivision of a system or of a region series.

Series. 1 Age values given are the Holmes "B" time scale points (Holmes, 1947, p. 145). Dates are rounded to the nearest 5 million years. The errors are unknown, but more recent age determinations by various phys-ical methods are in partial agreement with these values. For a recent compilation of radiogenic dates see selection of Adolph Knopf in Longwell's "Geologic column and scale of time" (1958, AGI 5). ² Provincial series accepted for use in U.S. Geological Survey reports are listed under both the time and the rock units.

GEOLOGIC NAMES OF NORTH AMERICA

INDEX TO THE GEOLOGIC NAMES OF NORTH AMERICA

By DRUID WILSON, GRACE C. KEROHER, and BLANCHE E. HANSEN

INTRODUCTION

Beginning in 1902, the U.S. Geological Survey has published five compilations treating the names of geologic formations and stratigraphic classification and nomenclature:

"North American Geologic Formation Names," by F. B. Weeks (Bull. 191, 1902).

"The Geologic Time Classification of the United States Geological Survey Compared with Other Classifications, Accompanied by the Original Definitions of Era, Period, and Epoch Terms," by M. Grace Wilmarth (Bull. 769, 1925).

"Names and Definitions of the Geologic Units of California," by M. Grace Wilmarth (Bull. 826, 1931).

"Lexicon of Geologic Names of the United States (including Alaska)," by M. Grace Wilmarth (Bull. 896, 1938; reprinted 1951, 1957).

"Geologic Names of North America Introduced in 1936–1955," by Druid Wilson, W. J. Sando, R. W. Kopf, and others (Bull. 1056–A, 1957).

The demand for compilations of geologic names is well attested by the circumstance surrounding the completion of the first Survey compilation by F. B. Weeks. In 1899, after it became apparent that the task was too great for one compiler, Survey geologists were asked to help, and were apportioned parts of the geologic literature to review. In this way the compilation was completed and published in 1902. The following geologists participated: M. R. Campbell, N. H. Darton, J. S. Diller, G. H. Girty, C. W. Hayes, F. H. Knowlton, F. L. Ransome, G. O. Smith, A. C. Spencer, T. W. Stanton, J. A. Taff, T. W. Vaughan, and David White.

Wilmarth's compilation of terms used in geologic-time classification was published in 1925 and is still invaluable for quotations of the original definitions and descriptions of the standard and other stratigraphic and time divisions from widely scattered and sometimes unavailable sources. The California names and their annotations published in 1931 were repeated without change in Wilmarth's lexicon of the United States names in 1938. The reprinting of Wilmarth's lexicon in 1951 and 1957 confirms its place in the field of geologic publications. Brevity of format in "Geologic Names of North America Introduced in 1936–1955" made it possible to bring out quickly a compilation intended to be superseded by the first supplement to Wilmarth's lexicon, now in preparation.

In the present report the geologic names of North America, including Greenland, the West Indies, the Pacific Island possessions of the United States, and the Trust Territory of the Pacific Islands, that were published before 1956 are arranged to form a nonalphabetic index to Wilmarth's lexicon and to the "Geologic Names of North America Introduced in 1936–1955." This grouping of the names on the basis of the age and politico-geographic divisions containing the type locality is an easily used key not available elsewhere. The age of each formation (that is, rock unit) named from an area is shown, but not its complete geographic extent. The geologic-time and timestratigraphic units are grouped together under the major time divisions.

Some names entered in Wilmarth's lexicon have been omitted. They include (a) all paleontologic and descriptive terms, (b) all names of economic units, such as miner's terms, trade names, and subsurface names identical with the names of formal rock units, (c) the names of moraines and other units of which physiography is an essential part of the definition, and (d) the names of orogenies. The American Commission on Stratigraphic Nomenclature (1955, p. 2008) has recommended that the names of moraines and other physiographic units be considered informal and not subject to the rules that apply to stratigraphic names.

The names of the rock units are listed once only—in the geographic area that contains or is assumed to contain the type area or locality. Thus, the Grenville series, a geologic name commonly used in the State of New York, is listed under the Canadian province of Ontario, where its type locality occurs; and the Colorado group or shale, used widely in Canada, is under the State of Colorado. Not all geologic formations end at political boundaries.

In the period of more than 20 years since the compilation if Wilmarth's lexicon, many names have been revised and many names not then accepted for use by the U.S. Geological Survey have been adopted. Adoption of names for use by the U.S. Geological Survey is based on the published and unpublished reports of Federal Survey geologists on areas of the United States and its possessions or trust territories. The U.S. Geological Survey has had occasion to consider for acceptance or rejection considerably less than one-half of the names of geologic units occurring in the United States. The names of units adopted through 1958 appear in boldface type under their currently designated ages. Changes in the designated rank and age of the named units accepted for use in U.S. Geological Survey reports are shown here as authorized by the Chief Geologist, upon the recommendation of the Geologic Names Committee of the Federal Survey. They embody all changes, published or unpublished, made before July 1, 1959.

Numerous inconsistencies in listed age assignments are apparent in this compilation. These result in part from differences of opinion of the original authors and in part from Survey-accepted revisions and investigations that have been made since the publication of Wilmarth's lexicon. Thus, the inconsistencies illustrate the essential subjectivity of all age assignments and reflect the objectivity that a compiler seeks to attain.

The compilers are responsible for listing changes in the age designations of certain non-Survey names. These are (a) age assignments of a few units whose ages had been listed in general terms; (b) placing under Paleocene some units formerly listed as Eocene; and (c) assignment of some units of Pennsylvanian age to provincial series in conformance to the nomenclature adopted by agreement of the State geological surveys of Iowa, Kansas, Missouri, Nebraska, and Oklahoma and for the most part accepted by the U.S. Geological Survey.

Age changes and future revisions of all units will be considered in supplements to Wilmarth's lexicon, where they can be adequately documented. The first supplement is now in preparation.

The names are grouped under two main categories: (a) geologic-time and time-stratigraphic units, and (b) rock units. Only the time units require explanation. There is general agreement among American geologists as to the major practical stratigraphic and time divisions, if not as to their boundaries. Those in use by most geologists and the U.S. Geological Survey are shown in the table (p. IV). Less agreement exists in the use of the term "series." "Series" has been used as a rock (rock-stratigraphic) term of higher rank than "group," but more commonly as a time-stratigraphic (time-rock) term for a subdivision of a system. In the following reports concerned with stratigraphic classification and nomenclature, "series" has been considered as a part of the time-stratigraphic classification: Schenck and Muller (1941, p. 1421), the American Commission on Stratigraphic Nomenclature (1947, p. 523), Hedberg (1948, p. 452; 1958, p. 1892), Woodring (1953, p. 1082), and Dunbar and Rodgers (1957, p. 297-298). The use of "series" as a time-stratigraphic term has been recommended by the American Commission on Stratigraphic Nomenclature (1956, p. 2006), and the U.S. Geological Survey will consider this usage for acceptance when the Commission adopts the revised Stratigraphic Code.

Because of this variance in usage, the names of most series are listed with both the time and the rock units, but a few names of series that are undefined and have had little or no usage—for example, the Nutrian series of Jurassic age in Arizona—are listed only under the rock units. The names of some series and stages which have been derived from units listed in Wilmarth's lexicon as rock units, and which are currently in wide usage, appear under the time units as a part of the standard sequences of certain periods. These are cited from the various sources from which the standard sequences were taken, and the designation under which they are entered in Wilmarth's lexicon appears in brackets; the Osage series [see Osage group ¹] of Early Mississippian age is an example. Precambrian series that have been used to indicate correlative time are listed with the time units, but the majority of the Precambrian series names are listed only under the rock units.

ACKNOWLEDGMENTS

We are grateful for the cooperation and assistance of George V. Cohee, chairman, and the staff of the Geologic Names Committee during the compilation of this index. Thanks are extended to Ellen James Trumbull for advice on the problems of arrangement and to Allison R. Palmer for advice concerning Cambrian time-stratigraphic terms. Other colleagues to whom we are indebted for helpful suggestions are: Jean M. Berdan, W. A. Cobban, P. E. Cloud, Jr., Helen Duncan, D. L. Durham, J. T. Dutro, James Gilluly, C. B. Hunt, G. E. Lewis, F. S. MacNeil, C. W. Merriam, G. N. Pipiringos, C. A. Repenning, R. J. Ross, Jr., W. J. Sando, G. R. Scott, J. E. Smedley, P. D. Snavely, Jr., Sandra Whalen Stock, Martha Toulmin, J. A. Vedder, and W. P. Woodring.

BIBLIOGRAPHY

Inasmuch as the correlation charts prepared by the Committee on Stratigraphy of the National Research Council, usually referred to as the GSA (Geological Society of America) correlation charts, are the major source of the arrangements of the standard time sequences given under the time units, they are listed here by number as a convenient source of reference. Other references follow, listed alphabetically.

SYMBOLS

- Names printed in **boldface** type have been adopted for use by the U.S. Geological Survey.
- [†]Names preceded by a dagger have been either abandoned by their authors or rejected for use by the U.S. Geological Survey.
- ¹ Names followed by this superscript are in Wilmarth's "Lexicon of Geologic Names of the United States (Including Alaska)" (U.S. Geol. Survey Bull. 896).
- ² Names followed by this superscript are in "Geologic Names of North America Introduced in 1936–1955" (U.S. Geol. Survey Bull. 1056–A).
- Names in use by the U.S. Geological Survey for which the rank or lithic designation has been changed are followed by the former designation in parenthesis, except when the original combination is a part of the currently accepted usage. Examples (both from the Pleistocene names of Kansas):

Pearlette ash¹ member (of Sappa formation)

Missler member (of Ballard formation); (as member of Meade formation 2)

GEOLOGIC TIME AND TIME-STRATIGRAPHIC (TIME-ROCK) UNITS

Sequences of units commonly used as standards for North America are given under each major time division. They have been assembled from several sources, but mainly from the correlation charts prepared by the Committee on Stratigraphy of the National Research Council.

Certain of the sequences coincide in part or completely with current usage of the U.S. Geological Survey; thus the units adopted are shown in boldface type. A single unit in boldface within a sequence does not indicate that all or other parts of the sequence have been adopted; only those units appearing in boldface type are currently in use by the Survey. In all instances the precise rank and terminology, and certain restrictions in Survey usage, are noted.

TIME TERMS OF NONGEOGRAPHIC ORIGIN

The terms listed below have been proposed for various units of geologic time. The nongeographic origin probably indicates that all were intended for world-wide application. A few have had considerable usage, but most of the terms are currently replaced by standard divisions of geologic time (see table, p. IV). The nongeographic term Phanerozoic has come into usage as a convenient expression covering Cambrian plus all later time. It was proposed as the Phanerozoic or Phanerobiotic eon by Chadwick (1930, p. 48) together with the Cryptozoic or Cryptobiotic eon for all Precambrian time. Harris (1932, p. 489) independently proposed the Phenozoic and Cryptozoic eons for the same spans of time.

Recent Autocene¹ Holocene¹ [†]Psychozoic era ¹ Quaternary Antropoceno periodo² Cenocene series 1 Epicene series 1 Hectozoic 1 Tertiary Neozoic¹ Pentozoic¹ Miocene-Pliocene Neogene¹; Neocene¹ Eocene-Oligocene Eogene¹ Paleocene-Oligocene Paleogene ¹

These

stages are based on the Antigua and the Anguilla formations, from the islands of the same names, which are considered by other geologists to be of late Oligocene and early Miocene age, respectively.

be of late Oligocene and early Miocene age, respectively. Sequence of microfaunal substages proposed for the middle and late Miocene of the central Atlantic Coastal Plain by Malkin (1953, p. 767-768):

	(late	Yorktownian substage (Virginia) St. Marysan substage (Maryland)
Miocene	middle	Choptankian substage (Maryland)
		(Calvertian substage (Maryland)

Western North America

Two sequences of stages are in use for the marine Cenozoic of western North America. The microfaunal stages are based on the chronologic occurrence of species or assemblages of species of foraminifera, believed to be independent of the lithic units in which they are found. The more or less informal megafaunal "stages" are based, according to Durham (1954, p. 23), on the distribution of species of megafossils, mainly mollusks and echinoids, within formations and sequences of formations from which the names of the "stages" are derived. The present arrangement is adapted from the marine Cenozoic correlation chart (Weaver and others, 1944, Chart 11), from later additions to the microfaunal sequence by Natland (1953) and by Mallory (1953; 1954; 1959), and from the charts of Durham, Kleinpell, and Savage (*in* Durham, 1954, p. 25) and Durham, Jahns, and Savage (1954, p. 60). The microfaunal stages proposed for the Pliocene nad Pleistocene by Natland have not been fully defined and have not yet been used as widely in publication as the microfaunal stages proposed for the Oligocene by Schenck and Kleinpell (1936) and for the Miocene by Kleinpell (1934; 1935; 1938). The Paleocene and Eocene stages earlier proposed by Mallory were fully defined in 1959. The equivalence of the stages of the microfaunal and megafaunal sequences is fairly well established, but the adherents of the two time scales are not in complete agreement on correlation with the standard major Tertiary divisions. The disparity of the two correlations with the Tertiary divisions is graphically shown below. The spacing of the rules shows only the equivalence of the stages of the two scales; no indication of relative time span is intended. A partly dashed rule indicates doubt concerning precise correlation with the apposed stage. All type areas except those indicated are in California.

Other continental Cenozoic ages and stages:

North America Pleistocene Rancholabrean age ² (California) Irvingtonian age ² (California) California Pliocene (Clarendonian) Montediablan stage ² Cerrotejonian stage ²

MESOZOIC

The European stages listed below are commonly used for North America, and according to Longwell (1958, AGI 5) there is no other generally accepted classification. No standard American time classification is given for any of the periods or systems of the Mesozoic on the correlation charts prepared by the Committee on Stratigraphy of the National Research Council.

Cretaceous	Late	Maestrichtian Campanian Santonian Coniacian Turonian Cenomanian	Senonian
Cretaceous	Early	(Albian Aptian Barremian Hauterivian Valanginian Berriasian (Infra- Valanginian)	Neocomian
	Late	Purbeckian Portlandian Kimeridgian Oxfordian	
Jurassic	Middle	{Callovian Bathonian Bajocian	
	Early	Toarcian Pliensbachian Sinemurian Hettangian	

*We acknowledge advice on localty data from H. E. Wood, 2d chairman of the committee currently revising the continental time scale.

Mesozoic-Continued

	Late	{Rhaetian {Norian Carnian (Karnian)
Triassic	Middle	{Ladinian {Anisian (Virglorian)
	Early	${Scythian (Werfenian)}$

Cretaceous

The units listed below have been used or are currently in use for parts of the Cretaceous in the areas indicated. North America Late Cretaceous Cordilleran system 1 Early Cretaceous †Comanchean system 1 (Texas) [†]Shastan system ¹ (California) Gulf Coastal Plain Late Cretaceous Gulf series ¹ (Texas) Early and Late Cretaceous Comanche series 1 (Texas) Early Cretaceous Coahuila series (as Coahuila group²) (Mexico) California and Oregon Early Cretaceous Shasta series 1 (California) Sequence of microfaunal stages proposed for the Late Cretaceous of California by Goudkoff (1945, p. 956–1007):

(Cheneyan stage ("pre-Martinez Paleocene or post-Moreno Cretaceous"; author favored Paleocene; placed here for convenient listing) Ciervian stage Ingramian stage Tracian stage Weldonian stage Cachenian stage Delevanian stage

Jurassic

Late Cretaceous

Triassic

No geographically derived names of time units based on faunal or physical criteria occurring in the Triassic and Jurassic rocks of North America have been recorded in the Lexicon files.

PALEOZOIC

A number of names have been proposed for units of great magnitude based on physical and faunal criteria occurring in the rocks of North America. Some of them were thought to be more appropriate for North America than the now standard major stratigraphic and time divisions, which are mainly of European derivation. With the exception of the Mississippian and Pennsylvanian systems, few of these units ever gained very wide acceptance, and none is in current use as a period or system. Some encompass parts or all of more than one of the Paleozoic periods or systems and are so listed below; the others are entered under the appropriate age.

Paleozoic Appalachian system ¹ (Pennsylvania) †New York system ¹ (New York) Devonian—Mississippian †Bradfordian ¹ (Pennsylvania-New York) Chattanoogan series ¹ (Tennessee) Erian period ¹ (New York) †Waverlyan system ¹ (Ohio)

422

Paleozoic—Continued Silurian-Devonian Monroan¹ (Michigan) Yorkian period¹ (New York) Ordovician—Silurian †Oswegan period¹ (New York) †Hudson period¹ (New York) Cambrian—Silurian †Mohawk system¹ (New York) Cambrian—Ordovician Ozarkian system¹ (Missouri) †Potsdam period¹ (New York) †Taconic system¹ (New York) Hudson system¹ (New York) †Taconian¹ (New York)

Permian

The Permian series commonly in use as the standard sequence in central and southwestern United States (see Longwell, 1958, AGI 5) are typically developed in Texas and New Mexico to which they are restricted in use by the U.S. Geological Survey:

> Ochoa series ² (New Mexico) Guadalupe series [see Guadalupe group ¹ (Texas)] Leonard series [see Leonard formation ¹ (Texas)] Wolfcamp series [see Wolfcamp formation ¹ (Texas)]

Other units:

Central United States Permian Big Blue series ¹ (Kansas) Cimmaron series [see under Cimmaron group ¹ (Kansas)] Minco division ² (Oklahoma)

Wanette division ² (Oklahoma)

Pennsylvanian

The type area of the Pennsylvanian system is in the northern Appalachian region in Pennsylvania, but a better standard section is in West Virginia (Moore and others, 1944, p. 665). The standard sequence for eastern North America, according to the Pennsylvanian correlation chart (Moore and others, 1944, Chart 6), given below, repeats the major stratigraphic divisions commonly used in the eastern United States, except that the Lee and the Kanawha series take the place of the division usually called Pottsville (p. 666).

> (Monongahela series [see under Monongahela formation ¹ (Pennsylvania)]

> Conemaugh series [see under Conemaugh formation ¹ (Pennsylvania)] Allegheny series [see under Allegheny formation ¹ (Pennsylvania)] Kanawha series [see under Kanawha formation ¹ (West Virginia)]

(Lee series [see Lee formation 1 or group (Virginia)]

The sequence given for central North America by Longwell (1958, AGI 5) is, with the exception of the Atoka series in place of the Lampasas series, the same sequence given by Moore and others (1944, Chart 6). They state (p. 666) that these series are used also in western North America and are thought to be applicable to the eastern United States and Canada as well. Their use as provincial series by the U.S. Geological Survey is restricted to the mid-Continent region:

(Virgil series 1 (Kansas)	Age according to 0.5. Geol. Survey usage Late
Missouri series [see Missouri group ¹ (Missouri)]] Des Moines series [see Des Moines group ¹ (Iowa)]	
Atoka series [see Atoka formation 1 (Oklahoma)]	Middle
Morrow series [see Morrow group 1 (Arkansas)] }	Early

Pennsylvanian-Continued Other Pennsylvanian time units: Eastern United States Pennsylvanian [†]Pittsburg series ¹ (Pennsylvania) Central United States PennsylvanianKansas period 1 (Kansas) Late Pennsylvanian Kawvian series (epoch)² (Kansas) Middle Pennsylvanian Cygian substage ² (Missouri) Oklan series (epoch) ² (Oklahoma) Venteran substage² (Missouri) Early and Middle Pennsylvanian †Bend series 1 (Texas) Ti Valley series ² (Oklahoma) Early Pennsylvanian Ardian series (epoch) * (Oklahoma) Lampasas series 2 (Texas) Pushmataha series² (Oklahoma) Southwestern United States Middle Pennsylvanian Derry series ² (New Mexico)

Mississippian

Eastern United States Late Mississippian

> Central United States Mississippian

> > Early Mississippian Iowa series ¹ (Iowa)

Leeic period ² (Iowa) Louisian ¹ (Missouri) Valmeyer series ² (Illinois)

The type area of the Mississippian system is in the upper Mississippi and the lower Ohio valleys (Weller and others, 1948, Chart 6). The series listed below are given by Longwell (1958, AGI 5) for central North America and, except for the form of the names (i.e., Chesterian, etc.), the same series are given by Weller and others as the standard sequence for North America. Their use as provincial series by the U.S. Geological Survey is restricted to the type Mississippian area.

Age according to U.S. Geol. Survey usage

Chester series [see Chester group ¹ (Illinois)] Meramec series [see Meramec group ¹ (Missouri)] Osage series [see Osage group ¹ (Missouri)] Kinderhook series [see Kinderhook group ¹ (Illinois)] Other Mississippian time units:

PRECAMBRIAN

(See also under Time terms of nongeographic origin)

Properly, Precambrian divisions should not be listed under time units. The perennial use of terms such as era, period, and system, reflects the desire of geologists to suggest by terminology the impressive magnitude of the Precambrian sequence and the long time-span necessary for the deposition of the sediments, the emplacement of the igneous rocks, subsequent metamorphism, and the develop-ment of notable unconformities. Criteria for consistent worldwide division of this vast expanse of time are inadequate. Stratigraphically significant paleontologic criteria, used for the rest of geologic time, have thus far not been discovered in Precambrian rocks. Radiogenic methods may eventually provide means for inter-regional correlation when there are enough of them, and with reduction of the margin of error in present techniques. Numeric dating, sometimes called the absolute age as opposed to relative age based on fossils, has been determined by radiogenic methods for numerous Precambrian rocks. Whereas this has upheld some lithologic correlations, the results have more commonly shown the unreliability of physical unity as a basis for time-stratigraphic correlation. As a result, in the current period of intensified radiogenic investigations, the use of time and time-stratigraphic (time-rock) divisions in the Precambrian of North America has declined. Among the authors who have discussed the problems of Correlation and time divisions within the Precambrian are Leith (1934, p. 169), Grout and others (1951, p. 1020, 1063-1064), Wilson (1952, p. 201-202), Gill (1952, p. 57-67; 1955, p. 25-29; 1955a, p. 117-124), Woodring (1953, p. 1083), Rodgers (1954, p. 658), Knopf (1955, p. 698-699), and Dunbar and Rodgers (1957, p. 298).

Units more commonly used as standard (i.e., time-stratigraphic) divisions as well as those suggesting great rank are listed below.

Greenland Greenlandian² Ketilidian² Northeastern United States Atlantic period ¹ or system ¹ (New Hampshire) Great Lakes and Canadian Shield regions Algomic period ¹ (Ontario) †Algonkian period ¹ or system ¹ (Lake Superior region) Anianic period ¹ (Cloud-Cuckoo-Land) Animikie series 1; Animikean 1 (Ontario) Coutchiching series ¹ (Ontario or Minnesota) Grenville series 1; Grenvillian 1 (Ontario) Haileyburian [see Haileyburnian 1 (Ontario)] Huronian series ¹; Huronic period ¹ (Ontario) Keewatin series ¹ (Minnesota) Keweenawan series 1 (Michigan) Knife Lake series ¹ (Minnesota); Knife Lake group of U.S. Geological Survey Labradorian 1 (Labrador)

ROCK UNITS

The names of the rock units are listed once only—in the geographic area that contains, or is assumed to contain the type area or locality. The symbols used are explained on page 413.

United States Alabama Quaternary(?)Buttahatchie gravel 1 Pleistocene Conecuh sands 1 [†]Geneva sands ¹ Mobile Bay formation ¹ Mon Louis formation 1 †Ozark sands 1 Tertiary [†]Alabama white limestone ¹ Pliocene Citronelle formation 1 Miocene(?) Roberts sand 1 Miocene, lower Paynes Hammock sand ² Oligocene, middle Glendon limestone 1 member (of Byram formation) Eocene [†]Tombigbee ¹ (formation) Eocene, upper, and Oligocene †St. Stephens division ¹, formation,¹ group,¹ or limestone ¹ Eocene, upper Cocoa sand member (of Yazoo clay); (as member of Jackson formation 1) Dellet sand member (of Moodys Branch marl)² North Creek member (of Yazoo clay)² Pachuta marl member (of Yazoo clay)² Shubuta member (of Yazoo clay)² Shubuta Hill clay ² Eocene, middle [†]Choctaw buhrstone ¹ Claiborne group 1 [†]Claiborne sand ¹ Gosport sand 1 Lisbon formation 1 Tallahatta formation ¹ Eocene, lower Bashi marl member (of Hatchetigbee formation); (as formation 1) †Bashi marl¹ Bells Landing marl member (of Tuscahoma sand)¹ [†]Bells Landing series ¹ **†Fort** Gaines ⁱ (formation) Grampian Hills member (of Nanafalia formation)²

United States—Continued Alabama—Continued Eocene, lower-Continued Greggs Landing marl member (of Tuscahoma sand)¹ †Greggs Landing series¹ Gullette Bluff beds 1 Hatchetigbee formation ¹ Nanafalia formation 1 †Nanafalia marl¹ Salt Mountain limestone 1 [†]Tuscahoma marl¹ Tuscahoma sand 1 or formation Wilcox group 1 or formation [†]Woods Bluff group or series ¹ Woods Bluff marl (in Bashi formation)1 Paleocene †Black Bluff group, clay or series 1 Chattahoochee 1 (formation) Clayton formation 1 Coal Bluff member (of Naheola formation); (as beds or series ¹) McBryde limestone member (of Clayton formation)² †Matthews Landing group or series 1 Matthews Landing marl¹ Midway formation or group 1 [†]Midway series or limestone ¹ Naheola formation 1 †Naheola marl †Oak Hill-Pine Barren group ¹ Oak Hill member (of Naheola formation)² Pine Barren member (of Clayton formation); (as beds 1) [†]Rutledge limestone ¹ [†]Sucarnoochee clay ¹ Upper Cretaceous Arcola limestone member (of Mooreville chalk) ² **Coker formation 2** [†]Cottondale formation ² Demopolis chalk (as division 1) Eoline member (of Coker formation) 2 †Eufaula sands ¹ Eutaw formation ¹ Gordo formation ² McShan formation ² Perote member (of Providence sand)2 *†*Portland division (of Selma chalk)2

United States—Continued Alabama—Continued Upper Cretaceous—Continued Prairie Bluff chalk ² Selma chalk 1 or group †Selma division (of Selma chalk)¹ [†]Tombigbee chalk ¹ Tuscaloosa formation,1 gravel, or group Lower Cretaceous Vick formation 1 Paleozoic (see also Precambrian or Paleozoic) Dempsey marble¹ (in Talladega slate) Probably Paleozoic Jumbo dolomite member (of Talladega slate)¹ robably Paleozoic (pre-Devonian) Butting Ram sandstone member (of Talladega slate)¹ Probably Cheaha sandstone member (of Talladega slate)¹ Post-Carboniferous [†]Bluff Springs granite ¹ Millerville green schist¹ Pinckneyville granite¹ Post-Carboniferous(?) Hillabee chlorite schist 1 Iwana green schist¹ Carboniferous (see Precambrian to Carboniferous; and Cambrian to Carboniferous) Carboniferous (probably Lower Pennsylvanian) Erin shale ¹ **Pennsylvanian** Black Creek coal group 1 Brookwood coal group ¹ Cobb coal group ¹ Dogwood coal group ¹ Fayette gas sand ¹ (subsurface) Gould coal group 1 Gwin coal group ¹ Horse Creek coal group (in Pottsville formation)¹ Mary Lee coal group ¹ [†]Montevallo conglomerate ¹ Nunnally coal group 1 Pratt coal group 1 [†]Sand Mountain conglomerate ¹ Straven coal group ¹ Lower Pennsylvanian Boyles sandstone member (of Pottsville formation)¹ Bremen sandstone member (of Pottsville formation)¹ Camp Branch sandstone member (of Pottsville formation)¹ Chestnut sandstone member (of Pottsville formation)¹ Lick Creek sandstone member (of Pottsville formation)¹ Lookout sandstone 1 Pine sandstone member (of Pottsville formation)¹

United States—Continued Alabama—Continued Lower Pennsylvanian-Continued Razburg sandstone member (of Pottsville formation)¹ **Rocky Ridge sandstone member** (of Pottsville formation)¹ Shades sandstone member (of Pottsville formation)¹ Straight Ridge sandstone mem-ber (of Pottsville formation)¹ Straven conglomerate membér (of Pottsville formation)¹ Wolf Ridge sandstone member (of Pottsville formation)¹ Mississippian Burgess oolite (in Bangor limestone)1 Dorans Cove sandstone¹ [†]Huntsville¹ (formation) [†]La Grange sandstone ¹ †Lauderdale chert ¹ [†]Monte Sano limestone; also group ¹ [†]Oxmoor sandstone and shales ¹ Rockwood oolite 1 Spout Spring oolite (in Bangor limestone)² Upper Mississippian Allsboro sandstone ¹ Alsobrook member (of Pride Mountain formation); (as formation 1) Bangor limestone ¹ Floyd shale 1 (see p. 622) Hartselle sandstone 1 Little Shades sandstone member (of Parkwood formation)² Parkwood formation 1 **Pride Mountain formation** (S.W. Welch, 1958, U.S. Geol. Survey Oil and Gas Inv. Chart OC-58) Southward Bridge formation ¹ Southward Pond formation ¹ Tuscumbia limestone 1 Lower Mississippian Fort Payne chert¹ Devonian (see also Cambrian-Devonian) Yellow Leaf quartz schist¹ Middle Devonian Ragland sandstone ¹ Lower or Middle Devonian Frog Mountain sandstone¹ Lower Devonian Clear Branch sandstone¹ Jemison chert 1 Cambrian-Silurian (see also Devonian) Red Mountain formation ¹ Ordovician (see also Cambrian-Devonian) [†]Pelham limestone ¹ Middle Ordovician Little Oak limestone 1

United States—Continued Alabama-Continued Lower Ordovician Attalla chert conglomerate member (of Chickamauga limestone)¹ Birmingham breccia¹ Chepultepec dolomite 1 Longview limestone ¹ or dolomite Newala limestone 1 or formation Odenville limestone ¹ [†]Salem breccia ¹ Cambrian to Carboniferous Wedowee formation 1 Cambrian-Devonian †Red Mountain group ¹ Upper Cambrian Bibb dolomite 1 Brierfield dolomite ¹ Ketona dolomite¹ Middle and Upper Cambrian †Coosa shale 1 †Flatwoods shale ¹ Middle or Upper Cambrian †Aldrich limestone ¹ Lower Cambrian Choccolocco shale 1 Ladiga sandstone¹ [†]Montevallo formation ¹ Weisner quartzite or formation 1 Precambrian to Carboniferous Talladega slate ¹ or formation Precambrian or Paleozoic Brewer phyllite (as member of Talladega slate 1) Sawyer limestone member (of Waxahatchee slate 1) Sylacauga marble member (of Talladega slate¹) Wash Creek slate¹ Waxahatchee slate ¹ Precambrian Ashland mica schist 1 Chewacla marble ¹ Hollis quartzite ¹ Lundy Mountian type¹ (mica schist) Age(?)Sougahatchee granite ¹ Alaska Quaternary (see also Tertiary and Quaternary) Arch Point basalt² Black Point basalt² Dushkin basalt² East Cape volcanics ² Little Pavlof agglomerate² Mount Emmons volcanics ² Mount Hague volcanics ² Okmok volcanics ² Pavlof volcanics ² Pavlof Sister volcanics ² Tanak volcanics ² Volcano Bay basalt flow ² Quaternary(?) **Buldir volcanics**²

United States—Continued Alaska—Continued Pleistocene or Recent Crater Creek basalt² Pleistocene (see also Pliocene or Pleistocene) Bristol Bay silts and gravels ¹ Cook Inlet gravels ¹ Copper River silts and gravels ¹ Ester ash bed 2 Flaxman formation ¹ Gubik formation (as sand 1) Kanektok silts and gravels ¹ Kowak clay ¹ [†]Kuskokwim gravels and silts ¹ Togiak gravels 1 Yukon silts 1 Tertiary and Quaternary Ashishik basalt² Great Sitkin volcanics² Idak basalt² Tulik basalt² Tertiary (see also Cretaceous or Tertiary) Andrew Bay volcanics ² Hayes River beds 1 Holokuk basalt² Nenana gravel¹ Porcupine beds ¹ Sand Bay volcanics ² Twelvemile beds ¹ Waterboot basalt² [†]Yentna beds ¹ Zeto Point basalt porphyry ² Tertiary(?) Tok sandstone 1 Tertiary, upper, to Recent Wrangell lava ¹ Tertiary, upper Belkofski tuff² Cathedral Valley agglomerate ² Tertiary, lower Sagavanirktok formation² Pliocene or Pleistocene Pinnacle¹ (system) Pliocene Nuwok formation² Pliocene(?) Palisades conglomerate¹ Miocene or Pliocene Nushagak formation ¹ Miocene and Pliocene(?) Yakataga formation i Miocene Unga conglomerate 1 Miocene(?) [†]Eska conglomerate ¹ Oligocene or Miocene Meshik formation ¹ Oligocene and Miocene **Poul Creek formation**¹ Oligocene Basin Creek member (of Katalla formation)²

United States-Continued Alaska-Continued Oligocene-Continued Burls Creek shale member 1 (of Katalla formation) Katalla formation 1 Puffy member (of Katalla formation); (as member of Redwood formation ¹) Redwood formation ¹ Oligocene, Upper Point Hey member (of Katalla formation); (as member of Redwood formation 1) Oligocene, lower and middle Split Creek sandstone member ¹ (of Katalla formation) Eocene Getmuna rhyolite group² Kushataka formation 1 Stepovak series ¹ Stillwater formation ¹ Tokun formation 1 Tyonek formation 1 Eocene, upper Gakona formation ¹ Kenai formation ¹ Eocene or Paleocene(?) Chickaloon formation 1 Paleocene(?) or Eocene, lower(?) Wishbone formation ² Mesozoic, Tertiary, and Carbonif-erous(?) [†]Oklune series ¹ Mesozoic (see Paleozoic and Mesozoic) Mesozoic(?) Cedar Bay granite 1 Eshamy granite¹ Nellie Juan granite¹ Upper Mesozoic(?) Orca group ¹ Valdez group 1 Cretaceous or Tertiary Agattu beds² Cretaceous (see also Jurassic or Cretaceous) [†]Cape Beaufort coal measures ¹ Upper Cretaceous and Paleocene(?) Iditarod basalt ² Upper Cretaceous Cantwell formation 1 Chignik formation 1 Colville group (as series ¹) [†]Holiknuk series ¹ Kaltag formation ¹ Kogosukruk tongue (of Prince Creek formation)² Matanuska formation 1 Melozi formation 1 Niakagon tongue (of Chandler formation)² Nulato formation 1 Prince Creek formation ² Schrader Bluff formation ² Seabee formation ²

United States-Continued Alaska-Continued Upper Cretaceous-Continued Sentinel Hill member (of Schra-der Bluff formation)² Shaktolik group 1 Thetis group 1 [†]Tuluga member (of Schrader Bluff formation)² Tuluvak tongue (of Prince Creek formation)² Ungalik conglomerate ¹ Upper(?) Cretaceous Bergman group ¹ Yakutat group ¹ Lower and Upper Cretaceous **Chandler formation 2** Corwin formation ¹ Ignek formation 1 Kuskokwim group ² Nanushuk group (as formation¹) Lower Cretaceous Anaktuvuk group ¹ †Hatbox tongue (of Chandler formation)² Herendeen limestone ¹ Kandik formation ¹ Kennicott formation ¹ Koyukuk group ¹ Nelchina limestone 1 **Okpikruak formation ²** Staniukovich shale ¹ **Topagoruk formation**² Torok formation ² Tuktu formation ² Lower and Lower(?) Cretaceous †Umiat formation ² Lower Cretaceous(?) Jualin diorite¹ Lower Cretaceous to Carboniferous(?) Gemuk group ² Cretaceous and Jurassic(?) Susitna slate 1 Jurassic, Cretaceous, and Tertiary †Matanuska series ¹ Jurassic or Cretaceous Boundary granodiorite 1 Coast Range intrusives ¹ Hyder quartz monzonite ¹ Kotsina conglomerate 1 Texas Creek granodiorite ¹ Jurassic(?) to Lower Cretaceous(?) Douglas Island volcanic group¹ Treadwell slate ¹ or formation Jurassic(?) Skwentna group 1 Upper Jurassic Chinitna shale 1, siltstone, or formation Chisik conglomerate member (of Naknek formation) 1 [†]Katmai series ¹ Naknek formation ¹ Pomeroy member (of Naknek formation)² Sheilikof formation ¹

United States—Continued Alaska—Continued Upper Jurassic—Continued Tiglukpuk formation ² (of Tonnie siltstone member Chinitna formation)² Middle and Upper Jurassic [†]Enochkin formation ¹ Middle Jurassic Bowser member (of Tuxedni formation)² Cynthia Falls sandstone member (of Tuxedni formation)² Gaikema sandstone member (of Tuxedni formation)² Kialagvik formation ¹ Tordrillo formation ¹ Tuxedni formation (as sandstone 1) Lower-Upper Jurassic Kingak shale ¹ Lower or Middle Jurassic(?) Thane volcanic group ¹ Lower Jurassic Aleuts member (of Kialagvik formation) ² Bidarka formation ² Kolosh member (of Kialagvik formation)² Talkeetna formation 1 Triassic, Jurassic, and probably Paleozoic [†]Berners formation ¹ Triassic Skolai volcanics ¹ Upper Triassic and Jurassic or Cretaceous [†]Gravina series ¹ Upper Triassic (see also Carbon iferous and Upper Triassic) Chitistone limestone 1 Gastineau volcanic group¹ Kamishak formation (as chert ¹) Kuskulana formation McCarthy shale or formation ¹ Nabesna limestone 1 Nizina limestone 1 Middle and Upper Triassic Shublik formation ¹ (see p. 621) Triassic or older Perseverance slate ¹ Paleozoic, Cretaceous, and Tertiary Mission Creek series ¹ Paleozoic and Mesozoic [†]Sunrise group ¹ or series ¹ Paleozoic and infolded Triassic(?) Clark Peak schist ¹ Paleozoic (see also Precambrian or Paleozoic; and Precambrian and Paleozoic) Kanuti group ¹ Paleozoic(?) and Tertiary(?) Finger Bay volcanics 2 Paleozoic(?) Esther granite 1 Sheep Bay granite ¹

United States—Continued Alaska-Continued Upper Paleozoic to Tertiary(?) [†]Kolmakof series ¹ Lower Paleozoic William Henry Bay marble ² Lower Paleozoic(?) [†]Totsen group ¹ or series ¹ Lower Paleozoic or older Kigluaik group ¹ [†]Lake quartzite schist ¹ Nome group 1 †Rapids schist 1 Tigaraha schist¹ Permian and Lower Triassic Saderochit formation (as sandstone 1) Permian and Triassic(?) Nikolai greenstone PermianMankomen formation 1 Tahkandit limestone 1 Pre-Permian Jacksina formation ¹ Pre-Permian(?) Monte Cristo diorite¹ Carboniferous and Upper Triassic [†]Ketchikan series ¹ Carboniferous (see also Silurian Devonian, and Carboniferous) also Silurian, Ahtell diorite ¹ Chisna formation 1 Suslota limestone 1 Tetelna volcanics ¹ Carboniferous andolder, and Jurassic †Nutzotin series 1 Carboniferous or older Klutina group 1 Pennsylvanian(?) Nation River formation 1 Mississippian Dadina schist¹ Lisburne group (as limestone ¹) Livengood chert¹ Streina formation 1 Wellesley formation 1 Mississippian(?) Totatlanika schist¹ Upper Mississippian Calico Bluff formation ¹ Lower Mississippian Circle volcanics 1 Mississippian (probably Lower Mississippian) Rampart group 1 Devonian and Mississippian Noatak sandstone (as formation 1) Devonian, Mississippian, and Silurian(?) [†]Fickett series ¹ Devonian (see Silurian, Devonian, and Carboniferous; and Lower and Upper Ordovician, Silurian, and Devonian)

United States-Continued Alaska-Continued Devonian(?) [†]Kasaan greenstone ¹ Kuzitrin formation ¹ Upper Devonian or Mississippian West Fork formation ¹ Upper Devonian Kanayut conglomerate (A. L. Bowsher and J. T. Dutro, Jr., 1957, U.S. Geol. Survey Prof. Paper 303-A, pt. 3, p. 3, 5, 7-12, figs. 2, 3, 4.) uver member (of Kanayut conglomerate); (as series ¹) Stuver Upper Devonian or older Neurokpuk formation (as schist 1) Middle Devonian Salmontrout limestone 1 Takotna formation 1 Vallenar formation 1 Woodchopper volcanics 1 Pre-Devonian Mentasta schist¹ Silurian, Devonian, Carandboniferous Tonzona group 1 Silurian [†]Bettles group ¹ or series ¹ Skajit limestone 1 Tolovana limestone 1 Middle or Upper Silurian Holitna group ² Post-Ordovician(?) Ben Lommond formation¹ Oligocene, upper Trinidad Point calcareous clay² Oligocene, middle, to Miocene, middle Brasso formation ² Oligocene, middle to upper Esmeralda member (of Brasso formation)²

West Indies—Continued Trinidad, British West Indies-Con. Eocene Bon Accord conglomerate² Fitt Trace marl² Nariva series ¹ Soldado Rock formation ¹ Eocene(?) Benitie group² Galeota group ² Lagoon Navête group ² Lagoon Palmiste group² Eocene, upper Boca de Serpiente formation ² Hospital Hill formation ² Morne Roche beds ² Mount Moriah formation ¹ Plaisance conglomerate² San Fernando formation^p Soldado formation ² Ulen Quarry beds² Vista Bella member (of Mount Moriah group)² Eocene, middle Pelican Rock marls² Eocene, lower or middle Friendship Quarry marl (in Navet formation)² Mount Harris beds (in Pointe-à-Pierre formation)² Penitence Hill marl (in Navet formation)² Pierre Point beds (in Pointe-à-Pierre formation)² Eocene, lower and middle Nariva River marl² Navet formation ² Peñal Quarry horizon (in Palo Seco formation)² Eocene, lower Dunmore Hill marl member (of Navet formation)² Ramdat marl (in Navet formation)² Serpent formation² Paleocene Chaudiere formation ² Cunapo River argiline² Ganteaume conglomerate ² Maroc formation 1 St. Joseph boulder bed ² Soldado formation ² Tarouba shale ¹ Paleocene, lower Lizard Springs formation ² Cretaceous or Tertiary Parian group ¹ CretaceousLa Carriere shale ¹ Point à Pierre grits ¹ Upper Cretaceous Bontour formation ² Chert Hill formation ³ Cunapo-Southern horizon (in Turure formation)²

West Indies—Continued Trinidad, British West Indies—Con. Upper Cretaceous—Continued Gautier formation ² Guayaguayare beds² (subsurface) Hobsons clay² Lantern Chaudiere marl (in shale)² Naparima Hill formation ² Railway Cut marl (in Chaudiere shale)² San Fernando argiline² Stack Rock limestone² Toco Bay beds ² Turure formation ² Lower Cretaceous Bon Accord formation ² Cuche formation² Cuche River beds² Cumana formation² Galera formation² Galera Grit member (of Galera formation)² Grande Riviere formation² Grande Riviere Road limestone ² Maridale formation² Plum Road formation ² San Souci volcanic formation ² Toco formation ² Zagaya limestone member (of Toco formation)² Lower Cretaceous(?) Caribbean group 1 Pre-Cretaceous(?) Laventille limestone 1 Jurassic Cuare limestone² Maracas beds² Maraval beds ² Picton limestone member (of Laventille formation)² Rio Seco formation² Upper Jurassic Hollis Reservoir formation ² Quaré limestone (in Hollis Reservoir formation)² Jurassic or older Dragon formation (type locality in Venezuela)² Virgin Islands Oligocene and Miocene **Kingshill marl**² Oligocene **J**ealousy formation ² Upper Cretaceous Mount Eagle volcanics (as series 1) Pacific Islands Detailed information on the geologic formations of all of the smaller islands in the Mid-Pacific area can be found in the Lexique Stratigraphique International, v. 1, Oceanie fascicule 2, Oceanie Proprement Dite.

Pacific Islands-Continued Caroline Islands (Angaur) Pleistocene and Recent Angaur (Older and Younger) limestone² Caroline Islands (Babelthaup) Pleistocene Palau limestone³ Pliocene Airai lignite bearing beds ² Oligocene Arumonogui (Almongui) agglomerate² Eocene Aimiriiki (Aimiliiki) agglomerate² Babelthaup agglomerate ² (Gamusetsu) agglom-Kameset erate² Ngardok (Galdog) beds * Caroline Islands (Eastern) Miocene East Caroline beds ² Caroline Islands (Fais) Pleistocene Caroline limestone² Fais limestone² Caroline Islands (Garim, island off Yap) Pleistocene Garim limestone² Caroline Islands (Kusaie) Pliocene Iisa beds ² Miocene Malam (Maremu) beds ² Caroline Islands (Map) Miocene Map formation ² Caroline Islands (Peleliu) Recent (Galkyoku) lime-Ngarekeukl stone² Pleistocene Peleliu limestone² Caroline Islands (Ponape) Miocene Metalanim (Matalanim) beds ² Caroline Islands (Truk) Miocene Getuyoto beds ² Caroline Islands (Yap) Oligocene Tomil agglomerate ² Pre-Tertiary(?) Yap formation ² Hawaii (Island of Hawaii) Quaternary (see also Tertiary, upper, to Quaternary) Glenwood tuff ² Kapukapu tuff² Olaa agglomerate ² Waiau formation ² Waimea formation ²

Pacific Islands-Continued Hawaii (Island of Hawaii)-Con. Recent Huehue flow ² Keanakakoi formation ² Recent and Pleistocene, upper(?) Kamehame basalt 1 Kau volcanic series ² Kona tuff formation ² Puna volcanic series ² Pleistocene or Recent Uwekahuna ash ² Pleistocene and Recent Hualalai volcanic series ² Honolulu volcanic series 1 Pleistocene and Recent(?) Laupahoehoe volcanic series ² Pleistocene Hawi volcanic series ² Kahuku volcanic series ² Makanaka drift and stage ² Pahala ash (as basalt ¹) Pohakuloa drift and stage ² Waihu fanglomerate ² Pleistocene(?) Hilina volcanic series ² Waawaa volcanics ² Tertiary, upper, to Quaternary Hamakua volcanic series ² Pliocene(?) Ninole volcanic series (as basalt1) Pololu volcanic series ² Hawaii (Island of Kahoolawe) Pliocene(?) Kanapou volcanic series ² Hawaii (Island of Kauai) Pleistocene and Recent Koloa volcanic series² Pleistocene Palikea formation² Pliocene(?) Haupu formation ² Makaweli formation² Mokuone member (of Makaweli formation)² Napali formation ² **Olokele** formation ² Waimea Canyon volcanic series ² Age(?) Kauai lavas ² Waimea conglomerate² Hawaii (Island of Lanai) Pliocene and Pleistocene(?) Lanai volcanic series (as basalt¹) Age(?) Manele basalt ¹ Hawaii (Island of Maui) Pleistocene or Recent(?) Lahaina volcanic series ² Laina volcanics² Pleistocene and Recent Hana volcanic series² Pleistocene Kaupo mud flow ²

Pacific Islands-Continued Hawaii (Island of Maui)-Continued Pleistocene(?) Big Falls picritic basalt ² Hanawi basaltic andesite ² Kapaula basaltic andesite ² Keanae basalt² Kilea volcanics² **Kipahula** formation ² Kuhiwa basaltic andesite ² Makaino basaltic andesite ² Makapipi basalt² Mossman picritic basalt ² Ohia basalt² Paakea basalt² Pauwalu basalt ² Piinaau basalt² Waiaaka basaltic andesite ² Wailuanui basalt ² Waiokamilo basalt² Pleistocene, lower, or Pliocene, upper(?)Honolua volcanic series ² Pliocene(?) Wailuku volcanic series ² Tertiary, upper(?) Honomanu volcanic series * Kula volcanic series ² Hawaii (Island of Molokai) Pleistocene(? Kalaupapa basalt² Pliocene West Molokai volcanic series ² Pliocene(?) East Molokai volcanic series² Hawaii (Island of Niihau) Pleistocene Kiekie volcanic series² Pliocene(?) Paniau volcanic series² Hawaii (Island of Oahu) Quaternary Aliamanu basalt² (subsurface) Kaau mud flow ² Kii Point limestone² Pyramid Rock basalt² Recent Black Point ash ² Diamond Head talus breccia¹ Kalama volcanics 1 Pleistocene(?) Kolekole volcanics² Pleistocene, upper, or Recent Kaupo basalt 1 Koko volcanics 1 Manana tuff¹ Sugar Loaf basalt¹ Tantalus basalt¹ Pleistocene, upper, and Recent Kaohikaipu volcanics ¹ Pleistocene, upper Ainoni volcanics 1 Aliamanu tuff¹

Pacific Islands-Continued Hawaii (Island of Oahu)-Continued Pleistocene, upper—Continued Black Point basalt ¹ **Castle volcanics** Diamond Head tuff 1 Fort Shafter gravel ¹ Haiku volcanics 1 Hawaiiloa volcanics 1 Kaau volcanics 1 Kaimuki volcanics ¹ Kalihi volcanics ¹ Kamanaiki basalt¹ Kaneohe volcanics 1 Kupikipikio basalt¹ or black ash 1 Makalapa tuff¹ Makawao breccia¹ Maunawili volcanics 1 Mauumae volcanics 1 Mokapu basalt¹ Mokolea basalt (as Mokulea basalt 1) Moku Manu volcanics 1 Nuuanu volcanics 1 Pali volcanics 1 **Punchbowl volcanics**¹ Rocky Hill volcanics 1 Salt Lake tuff 1 Training School volcanics ¹ Ulupau tuff ¹ Pliocene Pearl Harbor series 1 Pearl River series ¹ Pliocene(?) Kailu volcanic series 1 Koolau volcanic series 1 Waianae volcanic series ¹ Age(?) Black Point limestone² Mariana Islands (Aguijan) Pliocene Aguijan limestone² Mariana Islands (Farallon de Medinilla) Oligocene (Aquitanian) Medinilla (Lower and Upper) limestone² Mariana Islands (Guam) Recent Merizo limestone² Pleistocene Barrigada limestone² Pliocene Sumay limestone ² Talofofo peat-bearing beds ² Oligocene (Âquitanian) Asan limestone² Eocene Balanos andesite² Fena beds² Nagas beds² Santa Rosa beds² Umatac andesite²

Pacific Islands-Continued Mariana Islands (Pagan) Recent Pagan limestone² Mariana Islands (Rota) Recent Mirikattan limestone² Pleistocene Rota limestone² Pliocene(?) Poniya limestone² Miocene, lower Hirippo limestone ² Oligocene (Aquitanian) Taihamu (Taihanom) limestone ² Eocene Manila agglomerate² Mariiru beds² Mariana Islands (Saipan) Pleistocene or Recent **Tanapag** limestone² Pleistocene Chacha limestone² Pliocene and Pleistocene Naftan limestone² Miocene, lower Donni sandstone member (of Tagpochau limestone)² Laulau limestone² Machegit conglomerate member (of Tagpochau limestone) ² Tagpochau limestone ² Eocene As Perdido (Asuberudedo) beds * Eocene(?) Sankakuyama formation ² Eocene, upper Densinyama formation ² Hagman formation ² Matansa limestone² Mariana Islands (Tinian) Recent Dankuro limestone² Pleistocene Mariana limestone² Sonson limestone² Pliocene or Pleistocene Carolinas limestone² Oligocene (Aquitanian) Kasutesyo limestone² Lasso limestone ² Tinian beds² Eocene Marino agglomerate² Marino beds 2 Samoa Islands Recent Aunuu tuff ² Recent(?) Leone volcanics ² Pliocene(?) Alofau volcanics² Masefau volcanics² Olomoana volcanics²

Pacific Islands—Continued
Samoa Islands—Continued
Pliocene(?)—Continued
Taputapu volcanics ²
Pliocene and Pleistocene(?)
Pago volcanic series ²
Pliocene or Pleistocene, lower
Afono trachyte ²
Matafao breccia ²
Matafao trachyte ²
Papatele trachyte ²

Pacific Islands—Continued Samoa Islands-Continued Pliocene or Pleistocene, lower-Con. Pioa breccia² Pioa rhyolite² Vatia trachyte ² Pliocene and lower Pleistocene(?) Fagasa gabbro ² Lefulufulua trachyte² Leila trachyte² Tau trachyte²

ADDITIONS AND CORRECTIONS TO "ROCK UNITS" Additions:

The following new units are being used by the U.S. Geological Survey as formations containing earlier named units as members:

- Frailes formation (C. A. Kaye, 1959, U.S. Geol. Survey Prof. Paper 317-A, p. 16), Upper Cretaceous of Puerto Rico (p. 616)
- Houy formation (P. E. Cloud, V. E. Barnes, and W. H. Hass, 1957, Geol. Soc. America Bull., v. 68, no. 7, p. 810-816), Devonian and Lower Mississippian of Texas (p. 554)
- Owens Valley formation (C. W. Merriam and W. E. Hall, 1957, U.S. Geol. Survey Bull. 1061-A, p. 7-12), Permian of California (p. 450)
- Recent additions to and revisions of Survey usage made too late to be included in the text:

Genesee formation (as group¹), Upper Devonian of New York (p. 512), containing the following members:

Geneseo shale¹ member (p. 512)

- Genundewa limestone member (as lentil of Geneseo shale 1 (p. 512)
- Ithaca member (as shale member of Portage formation¹) (p. 512)
- Penn Yan shale member (as Tongue of West River shale²) (p. 512)
- Renwick shale member¹ (p. 512)
- Sherburne flagstone member (as member of Portage formation 1 (p. 512)

West River shale¹ member (p. 512)

- Keyser limestone (as member of Helderberg limestone¹), Upper Silurian and Lower Devonian (?) of West Virginia (p. 571)
- McElroy formation (as member of Fayette sandstone¹), upper Eocene of Texas (p. 546), containing the following members:

Dilworth sandstone member (as sand 1) (p. 545)

Manning clay member (as beds¹) (p. 545)

- Shublik formation,¹ Middle and Upper Triassic of Alaska (p. 433)
- Wells formation,¹ Pennsylvanian and Permian of Idaho (p. 460)

Additions:

- Whitsett formation (as beds¹), upper Eocene of Texas (p. 546), containing the following members:
 - Calliham sandstone member (as sand 1) (p. 545)
 - Dubose member (as sands and clays¹) (p. 546)
 - Fashing clay member (as clay¹) (p.546)
 - Stones Switch sandstone member (as sand 1) (p. 546)

Corrections:

- [†]Sharon coal group,¹ Lower Pennsylvanian of Maryland, omitted from text
- Sugarloaf quartz latite (p. 435), Cretaceous or Tertiary of Arizona (James Gilluly, 1956, U.S. Geol. Survey Prof. Paper 281, p. 90-93), erroneously entered in part A (p. 354) with reference belonging to Sugarloaf series (see below)
- Sugarloaf series, Cenozoic of Arizona (H. E. Enlows, 1951, Tulsa Geol. Soc. Digest, v. 19, p. 105-107)
- The names listed below are cited under erroneous localities in the text:
 - Bromley shale (in Cynthiana formation),¹ Middle Ordovician of Kentucky (p. 522)
 - Floyd shale,¹ Upper Mississippian of Georgia (p. 430)
 - Drywood formation or coal group,¹ Pennsylvanian (Des Moines) of Missouri (p. 526)

Geologic Names of North America

By DRUID WILSON and others

GEOLOGICAL SURVEY BULLETIN 1056

UNITED STATES DEPARTMENT OF THE INTERIOR

FRED A. SEATON, Secretary

GEOLOGICAL SURVEY

Thomas B. Nolan, Director

The U.S. Geological Survey Library has cataloged this publication as follows :

Wilson, Druid, 1906-

Geologic names of North America, by Druid Wilson and others. Washington, U. S. Govt. Print. Off., 1959.

iv, 621 p. table. 25 cm. (U.S. Geological Survey. Bulletin 1056)

Bibliography: p. 410-412.

CONTENTS.—A. Geologic names of North America introduced in 1936–1955, by D. Wilson, W. J. Sando, and R. W. Kopf.—B. Index to the geologic names of North America, by D. Wilson, G. C. Keroher, and B. E. Hansen.
