Atchafalaya National Wildlife Refuge (including Sherburne WMA)

Atchafalaya National Wildlife Refuge is one of more than 540 national wildlife refuges, managing over 94 million acres of land. The refuge is adjacent to the Sherburne Wildlife Management Area. Public use is managed through a cooperative agreement with the Louisiana Department of Wildlife and Fisheries as Sherburne Wildlife Management Area. P.O. Box 127, Krotz Springs, LA 70750, 337/566 2251.

Located in St. Martin and Iberville Parishes, the refuge is 30 miles west of Baton Rouge, Louisiana, 1 mile east of Krotz Springs, Louisiana and just east of the Atchafalaya River. To access from Interstate 10, take the Whiskey Bay Exit onto highway 975 (gravel road) nine miles north to the management area headquarters. From Highway 190, exit at the east toe of the Atchafalaya River Levee on Hwy 975. Head south for 2.5 miles to the management area headquarters.

Atchafalaya National Wildlife Refuge was established by Congress on October 26, 1984 (Public Law 98-396) with money from the Land and Water Conservation Fund. The U.S. Fish and Wildlife Service purchased 15,220 acres in 1986 from the Iberville Land Company. The refuge's name originated from its location within the Atchafalaya River Basin, the largest bottomland swamp in the USA.

The climate is mild with subtropical weather throughout the year. Average rainfall is approximately 54 inches.

The refuge manages for any and all threatened and endangered wildlife and plants that inhabit the refuge including the American Bald Eagle and Louisiana Black Bear. Secondary management is for waterfowl and other migratory birds, all other indigenous wildlife, and to provide wildlife oriented recreation, education, and demonstration.

Opportunities exist for bird-watching on the refuge. The refuge was identified as a Globally Important Bird Area by the American Bird Conservancy. The bottomland hardwood forests and the mix of bayous, oxbow lakes, sloughs, and swamps create a diversity of habitats important to a wide range of bird species.

Neotropical migrants abound during the fall and spring migrations, and many species nest on the refuge. The refuge supports a number of small wading bird rookeries. Each winter, several thousand waterfowl make their home on the refuge. Wood Ducks are common summer nesters.

The Swallow-tailed Kite nests on the refuge.

The following bird list contains 206 species, representing observations by refuge and state WMA personnel, local birders, researchers, and volunteers.

Sightings of unlisted species should be reported to:

Refuge Manager,

* Species of concern, due to declining populations

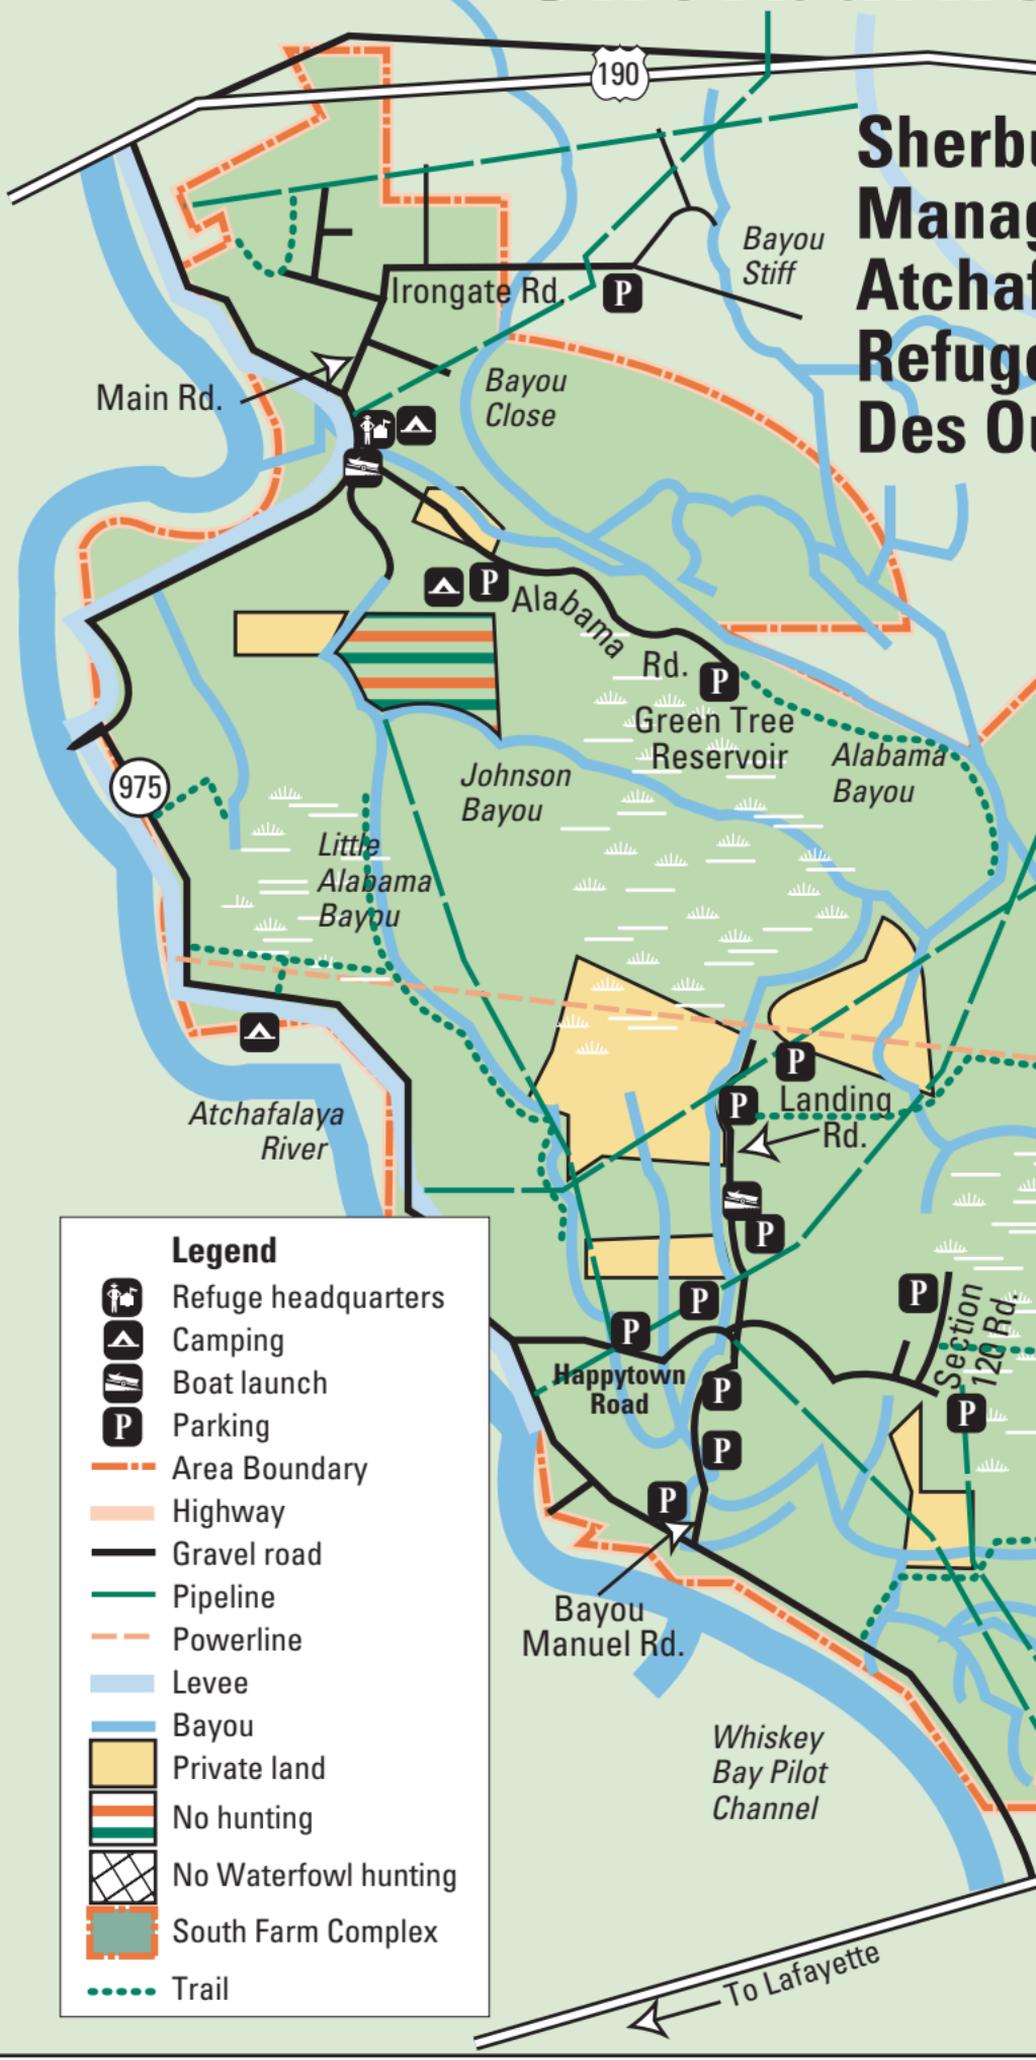

Ethics of Birdwatching

Take care not to disturb nesting birds, exposing eggs and young to extreme temperatures and predation.

Do not litter! Many birds die when they become entangled in fishing lines, 6-pack rings and other trash, or when they mistake garbage for food.
