### INTRODUCTION

This circular contains a list of the maps and reports released by the Geological Survey in 1958 that are available in open files. They may be consulted in the offices listed beneath each report.

The following circulars list open-file reports and maps released during the years indicated: 56 (1946-47), 64 (1948), 149 (1949-50), 227 (1951), 263 (1952), 337 (1953), 364 (1954), 379 (1955), 401 (1956), and 403 (1957).

The Administrative Division has placed in open file a report of a punch tape device.

The Conservation Division has placed in open file a report on the geology of an area in Wyoming.

The reports and maps of the Geologic Division contain results of work accomplished by Survey geologists and geophysicists in 16 states, Hawaii, the Philippines, and Puerto Rico. These maps and

reports are released in preliminary form in order to make information immediately available to persons concerned with exploration for and production of minerals, fuels, and construction materials.

The reports of the Water Resources Division contain information on streamflow, ground water, quality of water, and related geology and hydrology in the United States and in the British West Indies.

The reports are arranged alphabetically by authors, and each one is preceded by a serial number. In the general index following this list of reports, the serial number is used to identify the report.

The following addresses cited in this Circular are Geological Survey libraries: Room 1033, GSA Bldg. (General Services Administration Bldg.), Washington, D. C.; Denver Federal Center, Denver, Colo.; and 4 Homewood Place, Menlo Park, Calif.
