## NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards<sup>1</sup> was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Institute for Computer Sciences and Technology, the Office for Information Programs, and the Office of Experimental Technology Incentives Program.

**THE INSTITUTE FOR BASIC STANDARDS** provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of the Office of Measurement Services, and the following center and divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Center for Radiation Research — Laboratory Astrophysics<sup>2</sup> — Cryogenics<sup>2</sup> — Electromagnetics<sup>2</sup> — Time and Frequency<sup>2</sup>.

**THE INSTITUTE FOR MATERIALS RESEARCH** conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials, the Office of Air and Water Measurement, and the following divisions:

Analytical Chemistry — Polymers — Metallurgy — Inorganic Materials — Reactor Radiation — Physical Chemistry.

**THE INSTITUTE FOR APPLIED TECHNOLOGY** provides technical services developing and promoting the use of available technology; cooperates with public and private organizations in developing technological standards, codes, and test methods; and provides technical advice services, and information to Government agencies and the public. The Institute consists of the following divisions and centers:

Standards Application and Analysis — Electronic Technology — Center for Consumer Product Technology: Product Systems Analysis; Product Engineering — Center for Building Technology: Structures, Materials, and Safety; Building Environment; Technical Evaluation and Application — Center for Fire Research: Fire Science; Fire Safety Engineering.

**THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY** conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Institute consist of the following divisions:

Computer Services — Systems and Software — Computer Systems Engineering — Information Technology.

**THE OFFICE OF EXPERIMENTAL TECHNOLOGY INCENTIVES PROGRAM** seeks to affect public policy and process to facilitate technological change in the private sector by examining and experimenting with Government policies and practices in order to identify and remove Government-related barriers and to correct inherent market imperfections that impede the innovation process.

**THE OFFICE FOR INFORMATION PROGRAMS** promotes optimum dissemination and accessibility of scientific information generated within NBS; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world. The Office consists of the following organizational units:

Office of Standard Reference Data — Office of Information Activities — Office of Technical Publications — Library — Office of International Standards — Office of International Relations.

<sup>1</sup> Headquarters and Laboratories at Gaithersburg, Maryland, unless otherwise noted; mailing address Washington, D.C. 20234.

<sup>2</sup> Located at Boulder, Colorado 80302.

## PREFACE

Standard Reference Materials (SRM's) as defined by the National Bureau of Standards are "well-characterized materials, produced in quantity, that calibrate a measurement system to assure compatibility of measurement in the nation." SRM's are widely used as primary standards in many diverse fields in science, industry, and technology, both within the United States and throughout the world. In many industries traceability of their quality control process to the national measurement system is carried out through the mechanism and use of SRM's. For many of the nation's scientists and technologists it is therefore of more than passing interest to know the details of the measurements made at NBS in arriving at the certified values of the SRM's produced. An NBS series of papers, of which this publication is a member, called the NBS Special Publication - 260 Series is reserved for this purpose.

This 260 Series is dedicated to the dissemination of information on all phases of the preparation, measurement, and certification of NBS-SRM's. In general, much more detail will be found in these papers than is generally allowed, or desirable, in scientific journal articles. This enables the user to assess the validity and accuracy of the measurement processes employed, to judge the statistical analysis, and to learn details of techniques and methods utilized for work entailing the greatest care and accuracy. It is also hoped that these papers will provide sufficient additional information not found on the certificate so that new applications in diverse fields not foreseen at the time the SRM was originally issued will be sought and found.

Inquiries concerning the technical content of this paper should be directed to the author(s). Other questions concerned with the availability, delivery, price, and so forth will receive prompt attention from:

## TABLE OF CONTENTS

Standard Reference Materials:

GUIDE TO UNITED STATES REFERENCE MATERIALS

J. Paul Cali

Office of Standard Reference Materials  
Institute for Materials Research  
National Bureau of Standards  
Washington, D.C. 20234

and

Tomasz Plebanski  
Polish Committee of Standardization  
and Measures  
Warsaw, Poland

Summarized is a list of reference materials produced and distributed by U.S. manufacturers, both public and private. Extensive tables are indexed by use to which reference materials may be put. Properties covered include: chemical composition (analytical chemical purposes), chemical composition (high purity), physical properties, engineering and technological properties, and biochemical properties. Names and addresses of 93 U.S. producers and/or distributors are included.

Key words: Measurement; reference materials; standardization; Standard Reference Materials.

## GUIDE TO UNITED STATES REFERENCE MATERIALS

### I. Background

In 1976, the Council Committee on Reference Materials (REMCO) of the International Organization for Standardization proposed as the term "reference materials" the following definition: "A material or substance one or more properties of which are sufficiently well established to be used for the calibration of an apparatus or for the verification of a measurement method." "A certified reference material (CRM) is further defined as: "A RM accompanied by, or traceable to, a certificate stating the property value(s) concerned, issued by an organization, public or private, which is generally accepted as technically competent." A careful reading of this definition will lead the reader to the conclusion that a great many materials will rest comfortably under its umbrella. Thus, for an analytical chemist any pure chemical used to prepare what are usually called "standard solutions" can be considered to be a reference material. Simple devices, such as accurately calibrated optical filters, also are covered by this definition. Where to draw the line to exclude various chemicals or devices is somewhat arbitrary and no hard and fast rules have been developed to date. Weights used to calibrate or check balances are, e.g., not considered reference materials, even though they obviously fit the definition very well. For this reason then the reference materials listed herein are somewhat arbitrary. In fact, the inclusion or exclusion of a particular supplier's reference materials is first and foremost simply a function of whether or not he replied to our inquiry for information.

The current great interest in reference materials as an important means for helping to assure measurement compatibility in a wide variety of applications dates from 1969. In that year the National Bureau of Standards (NBS) and the International Committee on Weights and Measures (CIPM) cosponsored a meeting where the desirability of establishing a formal program internationally was explored. Representatives from 15 countries and 4 international agencies agreed unanimously that such a course of action would be desirable. The need for a central distributing agency for exchange of information on reference materials, preferably through an international agency was stressed. The CIPM was asked to assume this (and other) responsibilities. Subsequently however, the CIPM with regret had to decline due to a lack of resources and a misfit with regard to its scope. (1)

However, the matter was not dead for following the first large scale SRM Symposium held at NBS in 1973 - see reference (2), a meeting called by the International Organization for Legal Metrology was held to reactivate the matter. As a result of this meeting, attended by representatives of 12 countries and 7 international agencies, ISO subsequently agreed to provide secretariat services for international agencies interested in the exchange of information concerning reference materials.

Thus, ISO established REMCO in 1974 to coordinate reference material information exchange activities. Since one of the authors (J. P. Cali) is the U.S.-American National Standards Institute (ANSI) representative on REMCO, this report was prepared to provide information on reference material activity and availability in the U.S. for dissemination in international channels, as well as information of value to U.S. science, technology, and industry directly.

The other author (T. Plebanski) spent one year at NBS under a UNESCO fellowship studying RM's. With this work in place he helped gather, collate, and prepare for publication information on U.S. available reference materials. To this end, NBS contracted with him in 1974 to perform these functions.

## II. Purpose of Guide

All measurement networks need to be compatible. By this we mean that producer and consumer, or regulator and those regulated, need to be able to measure the property(ies) of the same sample in such a way that, within agreed on limits of uncertainty, all obtain identical numerical values of the property(ies) under measurement. Cali, among others, has shown (see 3 or 4 e.g.) that when measurement systems are based on accuracy that measurement compatibility must logically ensue. However, to achieve accuracy in measurement, especially when the property under consideration is that of composition, five basic components of the measuring process need to be available or present (see, e.g., 5). One of these is reference materials and called at NBS for historical reasons Standard Reference Materials (SRM).

Thus, a knowledge of where to obtain reference materials is important. This then is the basic rationale and principal purpose for this guide.

## III. Scope and Structure of Guide

Listed in the body of the report are over 17,000 reference materials. Of these approximately 7,200 fall into

the class "certified reference materials" (see Section IV, below). These 17,000 reference materials are either the direct product of or are distributed by the 93 U.S. companies and/or organizations who responded to the NBS request for information. The information supplied was primarily in the form of catalogues, product lists, etc.

Of the 17,000 reference materials listed, about 2,000 are produced in foreign countries, principally Japan and countries of Europe. There is, of course, considerable duplication among the reference materials. The duplication is especially strong in these classes: high purity elements and inorganic chemicals; spectrochemical mixtures, powders, and alloys; and, standard solutions and mixtures for atomic absorption calibration. We estimate there are listed approximately 10,000 different reference materials produced in the U.S.

No attempt has been made to make a quality assessment of either the producers or of their reference materials.

Two classes of reference materials have been listed: general reference materials (RM) and certified reference materials (CRM). These have been defined above. In attempting to decide whether a particular material was, in fact, suitable for use as a reference material, the general criteria listed by Cali in reference 6 were applied. Some of these criteria are: purity, homogeneity, stability, continuity of both supply and information, availability, and extent of certification process. Other factors considered were: (1) whether the producer states in his literature that his product is suitable for reference purposes (as calibrating material, e.g.); (2) whether the producer guarantees his product in some meaningful way; (3) whether useful technical information is supplied with his product (e.g., actual lot analysis); (4) by comparison of the same product from different sources; and/or, (5) by some evidence that traceability to national or international standards has been established. Thus, it is apparent that a considerable degree of subjective judgment was used by the authors. The ultimate test, of course, as to whether a particular material can serve usefully as a reference material must lie with the user.

The properties embodied in the reference materials are classified in five categories:

1. Chemical composition (Analytical RM) - multicomponent (usually) reference materials, often mixtures or solutions, used in chemical analytical systems. This class will include alloys, mixtures, natural materials, etc.

2. Chemical composition (High Purity RM) - single component (usually) reference materials of high purity used in chemical analytical systems. However, they may also serve for the realization or determination of other properties, e.g., physico-chemical, thermochemical, electrical, etc. Others, e.g., platinum, cesium, kryton serve as primary RM in defining international scales. These latter RM are certified for total purity of the main component and for trace impurities present.
3. Physical properties - reference materials characterized for optical, heat, radiation, etc. properties.
4. Engineering and technological properties - reference materials embodying properties as hardness, smoke density, etc.
5. Biochemical properties - reference materials of botanical, biological, clinical, bionuclear substances.

These categories are not necessarily mutually exclusive. Often RM's will be characterized for more than one property and thus will be found in the appropriate categories. E.g., some bionuclear RM's might be found in category(ies) 1, 3, and 5 if characterized for chemical composition, radioactivity, and biological activity.

Two tables are presented:

Table A: Index of Reference Materials. In this table are incorporated both matrices and properties of interest arranged in the five categories listed above. It would have been impractical to list individually every RM by chemical name or specific material. Therefore, we have tried to use classes or groups to lead the user to a supplier who can provide more specific information with regard to highly specific chemicals, matrices, or properties. In other words, the principal utility of this listing is to provide general guidance to the user to assist in shortening his search time and to make him aware of RM supplies he might otherwise have missed. Only in the catalogs of the various suppliers will be found the specific information usually required for the ultimate end-use.

Table B: Index of Suppliers. In this table we give the names and addresses of the suppliers who replied to our request for information. The addresses shown are those given by the supplier at the time his catalogues were delivered to NBS. Each is given a supplier number, an internal NBS file number, and the approximate number of RM's, either general or certified, produced or distributed.

#### IV. Disclaimer

In issuing this guide NBS makes no warranty, explicit or implied, that any RM listed will perform or not as claimed by the producer or distributor.<sup>†</sup> Neither does NBS, through the inclusion or exclusion of any RM producer or distributor, impute either directly or indirectly the technical, scientific, or economic value or worth of the RM's referenced. This guide is issued by NBS for information only to provide RM users or potential users to RM sources in the U.S. NBS, an agency of the U.S. Government, assumes no liability for damages resulting from the use or misuse of any of the information given in the guide or from use or misuse of the RM's referenced.

#### V. Updating of Guide

It is our intention to update the guide from time to time as interest and demand warrant. RM producers, suppliers, and distributors may send catalogues and pertinent information, together with suggestions to improve the usefulness of the guide to:

J. Paul Cali  
Chief, Office of Standard  
Reference Materials  
Institute for Materials Research  
National Bureau of Standards  
Washington, D.C. 20234.

<sup>†</sup>Excepting RM's and CRM's directly produced by NBS itself (Supplier #86).

A. INDEX OF REFERENCE MATERIALS

Category 1: Chemical Composition - Analytical Reference Materials

	<u>Supplier No.</u>
Air - See gases Category 1	
Air particulate analysis . . . . .	25
Alcohols--gas chromatography . . . . .	62
Alloys - ferrous chemical . . . . .	16, 19, 43, 48, 72, 73, 86, 91
- ferrous spectrochemical . . . . .	4, 10, 16, 19, 32, 43, 48, 72, 73, 86, 89, 91
- ferrous, specific for:	
C and S content . . . . .	38, 48
ferroalloys . . . . .	19
gases in . . . . .	48, 86
iron . . . . .	4, 10, 16, 19, 86
pure iron . . . . .	10, 38
slags . . . . .	4, 16, 19
steels . . . . .	4, 16, 19, 32, 86, 89
teaching students . . . . .	72
calibration of optical emission and x-ray fluorescence spectrometers . . . . .	86, 89
- ferrous (non-US origin) . . . . .	16, 19, 43, 73
- nonferrous chemical . . . . .	16, 19, 39, 43, 48, 72, 73, 86, 91
- nonferrous spectrochemical . . . . .	4, 5, 12, 16, 19, 32, 40, 43, 48, 56 72, 73, 86, 91
- nonferrous, specific for:	
aluminum . . . . .	5, 12, 56, 86
copper . . . . .	86
gold . . . . .	39
lead . . . . .	4, 56, 86
magnesium . . . . .	5, 86

nickel	•	•	•	•	•	•	•	•	•	•	•	•	4, 19, 32, 40, 86

Chelometry	•	•	•	•	•	•	•	•	•	•	•	•	44
Chlorine in lubricating oil	•	•	•	•	•	•	•	•	•	•	•	•	10
Chromatography	•	•	•	•	•	•	•	•	•	•	•	•	20, 31, 44, 53
- polystyrene polymers	•	•	•	•	•	•	•	•	•	•	•	•	28
- see also gas chromatography; Category 1	•	•	•	•	•	•	•	•	•	•	•	•	.
Clinical - see also clinical in Category 5	•	•	•	•	•	•	•	•	•	•	•	•	44, 86
Coal	•	•	•	•	•	•	•	•	•	•	•	•	48, 86
Coke	•	•	•	•	•	•	•	•	•	•	•	•	19, 48
Cryolite - Greenland natural and synthetic	•	•	•	•	•	•	•	•	•	•	•	•	5
Diesel fuel - contaminant standard series	•	•	•	•	•	•	•	•	•	•	•	•	54
- reference fuel	•	•	•	•	•	•	•	•	•	•	•	•	61
- sulfur in.	•	•	•	•	•	•	•	•	•	•	•	•	10

Dolomite.	37
Dunite dilute - pitchblende	85
- monazite.	85
Dye test mixture.	31
Ebony manganese	34
Electron probe-microanalytical	78, 86
Elements - listed in Category 2	
Elements in graphite.	
Environmental - gases	73
- hazards.	2,3, 86
Esters, gas chromatography.	53
Feldspar.	62
Flame emission spectroscopy	34
Fluors, primary	55
Fuels	61, 86
Fuel oil, residual, sulfur in	10
Gas chromatography.	13, 44, 53, 62
- solvents for.	44
Gases	
- see also Categories 2, 3 and 4	
- dopant mixtures	2
- environmental	2, 3, 86
- for chromatography.	44
- gaseous blends, synthetic mixtures	61
- helium mixtures	87
- hydrocarbons.	61
- in metals	48, 73, 86
- lung diffusion mixtures	2
- mixtures, two and multicomponent.	2, 3, 13, 44, 68
	86, 87
- moisture mixtures	3
- primary gravimetric mixtures	3, 68, 87
Gasoline - sulfur in.	10
- see also fuels in Category 4	
Glasses - trace elements in	
Graphite, impurities in.	86
Hastalloy	73
	32

Helium - crude mixtures.	87
- in neon . . . . .	2
- primary gravimetric mixtures.	87
- secondary partial pressure mixtures . . . . .	87
- with added components . . . . .	87
Hydrazines - environmental contaminants.	53
Hydrocarbons - blends. . . . .	86
- for gas chromatography.	62
- mixtures. . . . .	61, 74
Hydrogen in steel and titanium . . . . .	48
Inconel alloys . . . . .	4, 32, 40
Incloy alloys . . . . .	40
Indicators . . . . .	44
Insecticides - see Category 2	
Ionic metal standards. . . . .	44
Ionization and releasing agents. . . . .	33
Ion selective electrodes - see Category 3	
Iron - see ferrous alloys in Category 1 and elements in Category 2	
Kerosene - sulfur in . . . . .	10
- see also fuels in Category 4	
Ketones for gas chromatography . . . . .	62
Limestone. . . . .	37
Lube oil - sulfur and chlorine in. . . . .	10
Magnetite. . . . .	34
Metallurgy - for electron probe x-ray microanalysis. . . . .	72, 86
- see also alloys in Category 1	
Metals - for electronics, see Category 4	
- gases in. . . . .	48, 73, 86
- in drinking water . . . . .	4
- ionic standards . . . . .	44
- see also elements in Category 2 and alloys in Category 1	
Metallorganic compounds in liquid organic solutions. . . . .	10, 14, 27, 29, 33,
Microanalytical. . . . .	43, 54, 73, 91
	37, 44, 86

Minerals, ores and rocks.	• • • • •	5, 19, 34, 37, 72, 78, 85, 86
Mixes for spectrography	• • • • •	73
Monasite.	• • • • •	85
Monel alloys.	• • • • •	4, 32, 40
Monene hydrocarbon mixtures.	• • • • •	74
Nitrogen - see gases in metals Category 1, and gases in Categories 1 and 2	• • • • •	39, 73
Nobel metals - alloys and spectrographic mixtures	• • • • •	86
Nuclear materials - chemical composition.	• • • • •	55
Oxidation reagents.	• • • • •	•
Ores - see minerals in Category 1	• • • • •	•
Oxygen - see gases Category 1 and 2, and gases in metals Category 1	• • • • •	74
Paraffin mixtures for retention indices.	• • • • •	13, 28, 53, 62, 74, 82
Pesticides - mixtures, kits	• • • • •	53
- residue analysis	• • • • •	•
- see also Category 2	• • • • •	•
Phenols for gas chromatography.	• • • • •	62
Pitchblende	• • • • •	85
Pollution - emission control gases.	• • • • •	2, 3
- sulfur in oils and fuels.	• • • • •	10, 48, 86
- syringeable standards	• • • • •	53
Polychlorinated biphenyls (PCB)	• • • • •	13, 28, 53
Powder mixtures for spectrography	• • • • •	43, 73, 88
Rare earth - spectrographic mixtures.	• • • • •	73
Refractories.	• • • • •	86
Rocks - see minerals in Category 1	• • • • •	•
Sandspot.	• • • • •	34
Scintillators - premixed.	• • • • •	55
- see also scintillation and scintillators in Category 3	• • • • •	•
Sevin - carbaryl insecticide.	• • • • •	82
Sieve analysis - glass spheres.	• • • • •	86
Sinters	• • • • •	19
Slags	• • • • •	19
Spectrophotometry - reference substances for.	• • • • •	44
- see also spectroscopy in Category 3	• • • • •	•

Spectrography. . . . .	43, 44, 73, 81, 85
- see also spectroscopy in Category 3	88
- see also alloys, spectrochemical in Category 1	
Spectrographic solvents. . . . .	21, 61
Spectrum shifters. . . . .	55
Spodumene. . . . .	34
Steels - see ferrous alloys in Category 1	
Steroid mixtures . . . . .	74
Sulfur in coal . . . . .	48, 86
- coke . . . . .	48
- diesel fuel. . . . .	10
- fuel oil . . . . .	10
- gasoline . . . . .	10
- kerosene . . . . .	10
- lube oil . . . . .	10
- steel. . . . .	48
Sulfur hydrocarbons. . . . .	48
Synthetic organic mixtures . . . . .	61
Syringeable standards for gas chromatography of environmental hazards. . . . .	
Teaching students - alloys . . . . .	53
- commercial products . . . . .	72
- primary standards. . . . .	72
- rocks and ores . . . . .	72
Titrants . . . . .	29, 37
Trace element detecting kits . . . . .	1, 4
Waspalloy. . . . .	32
Water - oxygen 18 and 17 enriched . . . . .	51
- testing. . . . .	47
- trace metals in. . . . .	4
- waste water. . . . .	4

**Category 2: Chemical Composition - High Purity Reference Materials**

<u>Supplier No.</u>	
Acidimetric substances.	37, 44
Acids, dicarboxylic	62
Actinide metal halides.	64
Alkaloids for chromatography.	31
Alcohols.	62
Alkali metal halides.	64
Alkaline earth metal halides.	64
Amines.	53, 62
Antimicrobials.	62
Antioxidants.	53, 62
Atomic absorption, see also Category 1.	44
Benzil.	14
Benzoic acid.	14
Boride ceramic powders.	49
Carbide ceramic powders	49
Carbon.	15
- spectrographic	15, 80, 81
Carcinogens - environmental hazards	53
Chelometric substances.	44
Elements/including metals	7, 11, 15, 18, 19, 26, 30, 34, 35, 38, 43, 44, 45, 49, 50, 64, 71, 73, 86, 88, 90, 91
- full assortment of 5N and 6N pure standards.	7, 11, 15, 18, 30, 35, 44, 45, 49, 50
- crystals for spectrophotometry	18
- for electronics.	26, 30, 50, 88
- in various forms: rods, ingots, shots, powders, wires, sheets, foils, single crystals, sputtering targets, vapor deposition, flakes, chips, granules.	15, 26, 30, 45, 49, 50, 90, 91

- specific:

gallium.	64
germanium.	64
gold.	86
iron.	10, 38
lithium.	34
platinum	71
silicon-9N pure.	15, 64
zinc	86
Esters	62
Ferrites	49
Fertilizers.	86
Fixatives for electron microscopy made from ultrapure chemicals.	78
Gallium arsenide	52
Gases - environmental.	2, 3, 86
- individual, highest purity.	2, 3, 68, 86
- Kr-85	2
- research	2, 3, 68
- tritium	2
Glycosides for chromatography.	31
Graphite	15
- spectrographic.	15, 36, 80, 81
Halides	64
Helium - various specifications	87
Hydrazines - environmental contaminants.	53
Hydrocarbons	6, 53, 61, 62, 74
- polynuclear for chromatography.	23, 53
Inorganic compounds.	11, 15, 26, 30, 34, 35, 43, 44, 46, 49,
Lanthanide metal halides	50, 63, 64, 73, 85, 86, 91
Insecticides	23, 82
Ionic metals	44
Iron	10, 38
Lanthanide metal halides	64

Lithium metal, natural isotopic composition . . . . .	34
Metallorganics, see also Category 1. . . . .	11, 73, 86, 91
- for electronics . . . . .	91
Microchemicals . . . . .	44, 86
Monoene hydrocarbons . . . . .	74
Mutagens - environmental hazards for chromatography . . . . .	53
Nitroamines - environmental contaminants . . . . .	53
Nitrogen compounds - organic . . . . .	6, 53
Nitride ceramic powders. . . . .	49
Noble metals . . . . .	71
Organic compounds/general. . . . .	4, 6, 21, 23, 30, 44, 53, 61, 62, 86
Oxides . . . . .	49, 63
Pesticides, see also Category 1. . . . .	4, 13, 23, 53, 62
	82
Phenols . . . . .	62
Polychlorobiphenyls - environmental hazards . . . . .	53
Polynuclear hydrocarbons, environmental hazards . . . . .	53
- nitrogen compounds, environmental hazards . . . . .	53
Precious metal halides . . . . .	64
Primary standards for chemical analysis . . . . .	37, 44, 72, 86
Purines. . . . .	23
Pyrimidines. . . . .	23
Quartz/various forms . . . . .	67
Rare earth - fluorides . . . . .	63
- halides . . . . .	64
- oxides. . . . .	63
- sulfates. . . . .	63
- single crystals . . . . .	50
- see also inorganics in Category 2 . . . . .	50
Rare earths - see elements in Category 2 . . . . .	49
Seed crystals, metals . . . . .	15, 64
Silicide ceramic powders . . . . .	52, 75
Silicon - 9N pure. . . . .	21, 29, 44
- other. . . . .	
Solvents for gas chromatography and spectrophotometry. . . . .	

- for spectrography. . . . .
- organic solvents "distilled in glass" for numerous instrumental techniques . . . . . 21
- Sulfides. . . . . 62
- Sulfur compounds - organic. . . . . 6
- Teratogens - environmental hazards. . . . . 53
- Titanates - zirconates, ceramic powders . . . . . 49
- Titrants. . . . . 37
- Transition metal halides. . . . . 64
- Vanadium chemicals. . . . . 34
- Vitride - reducing agent. . . . . 29

Category 3: Physical Property Reference Materials

	<u>Supplier No.</u>
Acidimetry. . . . .	37, 44
Alpha reference sources . . . . .	8, 41, 55
Asphalt viscosity standards . . . . .	24
Atomic absorption - wavelength. . . . .	18, 33, 73, 92
- see also hollow cathode and cathodeon in Category 4	
- flame standards for . . . . .	44
- pure solvents for. . . . .	21
Beta-reference sources. . . . .	8, 41, 55
- standard radionuclide solutions . . . . .	41
C-13, NMR reference . . . . .	9
Cadmium mercury telluride - IR detector . . . . .	26
Californium-252, fission fragment sources . . . . .	8
Calorimetry . . . . .	6, 86
Chromatography, see Category 1	
Colorimetry . . . . .	35, 37
Colors. . . . .	86
Colored glass filters for spectrophotometry . . . . .	30
- see also absorption spectroscopy (Category 3), and also filters (Category 4)	
Combustion. . . . .	6

Conversion electron sources	8
Counting equipment/nuclear/calibration.	85
Cryometry - hydrocarbons suitable for comparative cryometric measurements.	6
Decoupling - NMR reference.	9
Density of liquids.	6, 65, 86
- solids	86
Deposits on filters - X-ray calibration	25
Deuterated NMR chemicals.	60
Dielectric-constant	66
- fluids	66
- loss	66
- solids	66
Diffraction - Mossbauer X-ray	86
Diffractometry.	25
Dimensions - glass spheres.	28, 86
- molecular sieves	64, 83
- membranes with precise pore geometry	58
- particle size.	28
- particulate standards	25
- see also sizing, Category 4	
Elasticity.	86
EDTA titrations	37
Electron microscopy, Category 4	
Electron probe, Category 4	
Electron spectrometry - calibration	55
Electrophoresis	17
Emissance/spectral.	86
Flame emission spectroscopy	33, 44, 54, 73
Flood sources/nuclear	55
Freezing - fixed temperature points	86
Gamma sources	8, 41, 55
- standardized solutions	41
Gas chromatography, Category 1	
Gases - calibration of instrumentation.	2, 3, 13, 44, 68, 86, 87

- deuterated	2
- gravimetric mixtures, standards linked to mass measurements	3, 68, 87
- Kr-85 and tritium mixtures	2
- radioactive mixtures	2
- stable isotopes	2
Hardness, Category 4.	70
Heat.	86
Immunodiffusion	17
Immunoelectrophoresis - varieties of: rocket, fused rocket, line, counter, double, crossed, crossed line, intermediate.	17
Infrared - crystals	33, 42, 93
- detectors	26, 76
- interference filters	42
- light emitters	52
- phosphors	29
Interference filters.	42
Interferometry - multilayer interference films for.	30
Internal reflection	42, 93
Iodine-125 and other simulated sources.	55
Ion - activity.	47, 69, 77, 86
- selective electrodes calibration	47, 69, 86
- solutions Cl, Br, Cu, I.	69, 77
Ion chamber - detectors, gamma reference sets	55
- standard sources	41
Isotopes.	2, 8, 41, 51, 60, 84, 86
Isotopes stable C-13, H-2, O-17, O-18, N-15	41
Labeled compounds C-14, C-13, N-15, H-2, H-3.	13, 23, 41, 55
Magnetic susceptibility	86
Mass spectrometry	73
- solvents for	21
Medicine - nuclear RM's for	8, 23, 41, 44
Melting points.	86
Microscopy.	28
Microwave materials	76
Molecular weight.	14, 28, 86

Mössbauer - sources	8
- x-ray diffraction.	86
N-15 NMR reference.	9
Nephelometry - immunoglobulin fraction standards	17
Neutral glass filters for spectrophotometry	30, 86
Neutron sources	8
NMR - calibration	9, 44
- C-13 reference	9
- decoupling	9
- deuterated chemicals	60
- miscellaneous.	60
- N-15 reference	9
- parameters set up standards.	9
- proton reference	9, 57, 60
- resolution	9
- sensitivity.	9
- shift.	60, 91
- temperature.	9
Nuclear radiation detectors	76
Nuclides - radioactive.	41
Optical crystals, also Category 4	18, 76
Optical emission - see spectroscopy in Category 3 and alloys	
spectrochemical in Category 1	
Ores for calibrating nuclear counting equipment	85
Osmometry	14
Oxygen-18 and -17 enriched water	51
Partial pressure - He mixtures.	87
Particle size - polystyrene, aluminum, carbon black, iron oxide,	
silica.	
Particulate standards - mineral deposits for calibration of X-ray	
diffractometers	25
Permittivity - see also dielectric constant in Category 3	86
pD.	86
PH.	44, 69, 77, 86
Photoconductivity	76
Photopolymerization/acrylamide.	
Photovoltaic materials.	17
	76

Resolution - NMR reference	• • • • •	9
Retention indices	• • • • •	74
Scintillation - cameras checking	• • • • •	55
- counting/liquid.	• • • • •	8, 21, 41, 44, 55
- phosphors, nuclear radiation detectors	• • • • •	76
- scintillators	• • • • •	41, 55
Shift - NMR reagents	• • • • •	60, 91
- spectrum shifters	• • • • •	55
Simulated standards	• • • • •	41
Spectroscopy - calibration and selected physical property	• • • • •	8, 14, 18, 21, 29,
reference materials: filters, plates, crystals, emitters,	• • • • •	30, 33, 42, 43, 44,
detectors, etc.	• • • • •	52, 55, 61, 73, 76,
		81, 86, 88, 89, 93

- absorption spectroscopy . . . . .	18, 29, 30, 33, 42,
- emission spectroscopy . . . . .	43, 44, 52, 86, 93
Category 1: alloys spectrochemical, atomic absorption, flame emission, metallorganics, mixes, spectrography . . . . .	8, 14, 21, 30, 43,
Category 2: carbon, elements, graphite, inorganics, metallorganics, solvents . . . . .	44, 55, 61, 73, 81,
Category 3: electron spectrometry, flame emission, infrared, NMR, X-ray . . . . .	86, 88, 89
- for specific information see the following key words in:	
Category 1: alloys spectrochemical, atomic absorption, flame emission, metallorganics, mixes, spectrography . . . . .	
Category 2: carbon, elements, graphite, inorganics, metallorganics, solvents . . . . .	
Category 3: electron spectrometry, flame emission, infrared, NMR, X-ray . . . . .	
Category 4: crystals, electrodes, detectors, emitters, filters, infrared, wear metals in oil . . . . .	
Temperature - fixed points reproducing IPTS-68/75. . . . .	86
- NMR reference . . . . .	9
Thickness (coating) . . . . .	79, 86
Titrimetry . . . . .	29, 37
Transmission . . . . .	42, 93
Transmission sources (nuclear) . . . . .	55
Tritium labeled compounds . . . . .	13, 23, 41, 55
Turbidimetry . . . . .	86
Uranium isotopic working standards . . . . .	84
UV - crystals for spectroscopy . . . . .	42
- interference filters . . . . .	42
Viscosity - standards . . . . .	24, 86
- asphalt . . . . .	24
- glass . . . . .	86
- polystyrene . . . . .	28
Visible interference filters . . . . .	42
Visocolor - test kits f. visual colorimetry . . . . .	35
Volume (micro) . . . . .	1
Volumetric analyses - primary standards, also Category 2 . . . . .	37
Wavelength . . . . .	18, 73, 86, 92, 93

X-ray fluorescence analysis, see also spectroscopy	10, 21, 41, 89
in Category 3 and alloys in Category 1.	• • •
X-ray - analytical standards.	• • •
- calibration by using deposits on filters	• • •
- filters.	• • •
- fluorescence source.	• • •
sources.	• • •
spectrometer analyzing crystals.	• • •
variable energy sources.	• • •
	8

**Category 4: Engineering and Technical Property Reference Materials**

Aluminum - particle size.	• • •	28
Asbestos - fiber reference standards.	• • •	28
ASTM - knock test reference fuel.	• •	61
- blends of ASTM reference fuels	• •	61
- naphthas (test fluids)	• •	61
Aviation check fuels.	• • •	61
Burets (micro) - volume standards	• • •	1
Calibration fluids.	• • •	61
Carbon black - particle size.	• •	28
Carbon for spectrography and electrodes	• •	15, 80, 81
Carbon foils f. nuclear physics and electron microscopy	• •	30
Cathodeon - atomic absorption hollow cathode lamps.	• •	73
Cellophane (gel) membranes for osmometry.	• •	14
Cellulose (-deacetylated acetyl) membranes for osmometry.	• •	14
Centrifugation - gradient medium.	• • •	35
Ceramic powders.	• • •	49
Coating thickness.	• • •	86
Color charts.	• • •	86
Corning filters.	• • •	43
Crystal quartz (cultured)	• •	67
Crystals.	• • •	18, 29, 33, 42, 49
	• • •	76, 78, 93
- for spectroscopy	• •	18, 33, 42, 93

Deposits on filters for x-ray calibration and diffractometry	25
Detectors - nuclear radiation	76
- miscellaneous	55, 59
- spectroscopy	26, 76
Developers	43
Diesel - oil contaminants	10, 54
- reference fuel	61
Diode material	52
Discharge devices for atomic absorption	92
Electrodes and rods (carbon and graphite) for spectrography:	
counter, cupped (Harvey and Scribner-Mullins type), porous,	
rotating disc	15, 36, 43, 80
Electrodes - silver for vacuum spectrometry	81, 88
Electron microscopy	88
- carbon foils	44, 78, 80
- fixatives	30
- graphite and carbon ultrarods	78
- stains	80
Electron probe	78
Electronic grade gases for semiconductor industry	78, 86
Electronics - organometallics for	3
- chemicals and metals for	91
- alloys for	26, 30, 88
- electro-optic modulators for laser technique	26
Emission control gases	76
Emitters of infrared light	3
Filters - optical	52
- particle size standards	30, 42, 43, 67,
Filtration checking	86
Flame standards for atomic absorption	28
Flammability (surface)	44
Flash point check fluids	86
Fuels - chlorine in	61
- sulfur in	10
- special to meet any desired specifications	10, 61, 86

Gallium - phosphides, arsenides, etc., for semiconductor and optoelectronic industry	49, 50, 52
Garnets - microwave materials	76
Gases - electronic for semiconductor industry	3
- emission control	3
- helium in neon spark chamber mixtures	2
- instrument	2, 3
- laser mixtures	2
- leak detection	2
- nuclear counter	2
- see also gases in Categories 1, 2, and 3	2
Glass	86
Glass spheres - particle size	28, 86
Graphite - spectroscopy rods, preformed electrodes, powders, etc.	15, 36, 43, 73, 80, 81, 88
- treated to meet customer specifications	80
Hardness	70
Hollow cathode f. atomic absorption (wavelength standards)	18, 33, 73, 92
Indium antimonide with complete electrical specification	26
Indium phosphide - semiconductors	50
Infrared - crystals	33, 42, 93
- detectors	26, 76
- filters	30, 42, 43
- light emitters	52
Iron oxide - particle size	28
Kodak filters	43
Laser - dyes	29
- gas mixtures	2
- interference filters	42
- IR phosphors	29
- Q-switching	29, 76
- technique and materials	26, 76
- transmission windows	42
Leak detection gas mixtures	2
Light sensitive materials	86
Light dividers - multilayer interference films	30

Liquid crystals for GC, NMR, etc.	29
Magnetic tapes	86
Membranes - for osmometry	14
- with precise pore geometry	58
- with imprinted grid pattern	58
- implant	58
- rectangular	58
Metrizamide - gradient medium for centrifuge	35
Moisture - gaseous mixtures	3
Molecular sieves	64, 83
Naphthas - ASTM test fluids	61
National marked spectroscopic carbon and graphite electrodes	36, 43, 81
Nitrobenzene - electronic grade	29
Nuclear counter - gas mixtures	2
Oils - calibration multielement spectroscopy standard	14
- chlorine in.	10
- sulfur in.	10
- wear metals in	14, 33, 43, 54,
Optical quality metal halides	73, 91
Optoelectronic materials	64
Osmometry - membranes for	49, 50, 52, 76
Paper - internal tearing resistance	14
Particulate and spiked particulate standards (deposits) for x-ray calibration and diffractometry	86
Petroleum ethers - test fluids	25
Phosphorous	61
Photographic materials	29, 30
Phthalocyanine compounds for laser Q-switching	86
Pollution, see Category 1	29
Polymers reference standards	61, 86
Polystyrene - monosized uniform and fluorescent microspheres	28
Pyrobond-silicon carbide graphite conversion	80
Pyrolytic graphite coated graphite	80
Q-switches for laser technique	29, 76
Quartz - cultured	67

Respiratory studies - lung diffusion mixtures . . . . .	2
- particle size standards. . . . .	28
Rockwell hardness . . . . .	70
Rubber - compounding materials . . . . .	86
- swelling test fluids . . . . .	61
Semiconductors. . . . .	50, 52
Silica - particle size. . . . .	28
Silicon for power and signal devices of semiconductor industry. . . . .	52
Silicon carbide coated graphite for epitaxial susceptors . . . . .	80
Single crystals - organic . . . . .	30
- see also elements in Category 2	
Sizing - membranes with precise pore geometry . . . . .	58
glass spheres . . . . .	28, 86
- molecular sieves . . . . .	64, 83
- particle size standards. . . . .	28
- particulate samples. . . . .	25
Smoke density . . . . .	86
Solvents - see Category 2	
Spectral sentillizers. . . . .	29
Sputtering targets. . . . .	50
- see also elements in Category 2	
Strips impregnated for air particulate analysis . . . . .	25
Superconductive thermometric fixed point device . . . . .	86
Surface flammability. . . . .	86
Test fluids . . . . .	61
Turbidimetry. . . . .	86
Vapor deposition metals . . . . .	50
Water vapor permeance . . . . .	86
Wear metals (metallorganics) in lubricating oil . . . . .	14, 33, 43, 54,
Windows - crystal . . . . .	73, 91
X-ray sensitive materials . . . . .	18, 42
	86

**Category 5: Biochemical Reference Materials (including biological, bionuclear,  
clinical, drug and medical reference materials)**

	<u>Supplier No.</u>
Agarose . . . . .	17
Aminoacids. . . . .	20, 23, 31, 41
Aminosugars . . . . .	41
Antibodies. . . . .	17, 22
Antisera. . . . .	41
Barbiturates. . . . .	13
Biochemicals conforming to NAS/NRC specifications . . . . .	22, 44
Biological samples - reference electron probe standards . . . . .	78
Blood cell counting and sizing - particle size standards . . . . .	28
Bovine liver - analytical standard. . . . .	86
Brain cerebroside hydrolyzates. . . . .	13
Buffers . . . . .	17, 41
Carbohydrates . . . . .	13
Cholesterol . . . . .	86
Cholesteryl esters. . . . .	13
Chromatography . . . . .	20
Clinical. . . . .	13, 22, 44, 86
DNA . . . . .	41
Drugs . . . . .	13, 20, 23
Electron probe x-ray biological standards . . . . .	78
Electron microscopy of biological materials . . . . .	78
Electrophoresis . . . . .	17
Ester Kits. . . . .	13
Fat and oil reference mixtures. . . . .	13, 74
Fatty acids - kits of . . . . .	13, 41
- methyl esters. . . . .	74
- methyl esters for gas chromatography . . . . .	13
Fatty alcohols. . . . .	13
Fixatives for electron microscopy . . . . .	78
Fluorescent labeling. . . . .	17, 41
Glutaraldehyde for electron microscopy of biological materials . . . . .	78

Growth factor analogs . . . . .	41
Immunoassay . . . . .	17, 55
Immunochemicals - standards for chromatography . . . . .	22
Immunodiffusion . . . . .	17
Immobioelectrophoresis . . . . .	17
Immunoglobulin. . . . .	17
Immunohistochemicals. . . . .	41
Insecticides, see Category 2	
Iodine high intensity gamma sources - calibration standards for radioimmunoassay. . . . .	
Jenden reagent. . . . .	
Labeled biocompounds, see also Category 3 . . . . .	23,
Lecithin. . . . .	13
Lourell buffer. . . . .	13
Nucleosides . . . . .	17
Nucleotides . . . . .	23
Nuclear medicine - materials certified in $\mu$ Ci . . . . .	23
- isotopes . . . . .	8
ODD carbon. . . . .	8
Oil reference mixtures (AOCS) . . . . .	13
Orchard leaves. . . . .	13
Osmium tetroxide for electron microscopy of biological materials . . . . .	86
Pesticides, see Categories 1 and 2	78
Phospholipids . . . . .	13
Photopolymerization . . . . .	17
Platinum thymine and platinum uracil blue - stains staining genetic materials . . . . .	78
Prostaglandins . . . . .	13
Protein labeling mixtures (C-14 and H-3) . . . . .	55
Radiochemicals. . . . .	13
Radioimmunoassay. . . . .	17, 55
Simulated sources for medicine. . . . .	55
Snake venoms. . . . .	41

Stains (biological) . . . . .	17, 41, 60, 78
- for electron microscopy. . . . .	78
- for fluorescent microscopy . . . . .	60
Steroids. . . . .	13, 23, 55, 74
Svendsen buffer . . . . .	17
Sugars. . . . .	20, 31
Sugar alcohols. . . . .	20, 31, 41
Triglycerides . . . . .	13
Triolein. . . . .	13
Tritium labeled compounds . . . . .	13, 23, 41, 55
UV enzymatic reagents . . . . .	22
Vitamins. . . . .	20, 31, 41

6. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)  Summarized is a list of reference materials produced and distributed by U.S. manufacturers, both public and private. Extensive tables are indexed by use to which reference materials may be put. Properties covered include: chemical composition (analytical chemical purposes), chemical composition (high purity), physical properties, engineering and technological properties, and biochemical properties. Names and addresses of 93 U.S. producers and/or distributors are included.				
7. KEY WORDS (six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)  Measurement; reference materials; standardization; Standard Reference Materials.

# NBS TECHNICAL PUBLICATIONS

## PERIODICALS

**JOURNAL OF RESEARCH**—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology, and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent NBS publications in NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$17.00; foreign \$21.25. Single copy, \$3.00 domestic; \$3.75 foreign.

Note: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

### DIMENSIONS/NBS

This monthly magazine is published to inform scientists, engineers, businessmen, industry, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on the work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing.

Annual subscription: Domestic, \$12.50; Foreign \$15.65.

## NONPERIODICALS

**Monographs**—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

**Handbooks**—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

**Special Publications**—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

**Applied Mathematics Series**—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

**National Standard Reference Data Series**—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a world-wide program coordinated by NBS. Program under authority of National Standard Data Act (Public Law 90-396).

**NOTE:** At present the principal publication outlet for these data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St. N.W., Wash., D.C. 20056.

**Building Science Series**—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

**Technical Notes**—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

**Voluntary Product Standards**—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The purpose of the standards is to establish nationally recognized requirements for products, and to provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

**Consumer Information Series**—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

*Order above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.*

*Order following NBS publications—NBSIR's and FIPS from the National Technical Information Services, Springfield, Va. 22161.*

**Federal Information Processing Standards Publications (FIPS PUB)**—Publications in this series collectively constitute the Federal Information Processing Standards Register. Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

**NBS Interagency Reports (NBSIR)**—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services (Springfield, Va. 22161) in paper copy or microfiche form.

## BIBLIOGRAPHIC SUBSCRIPTION SERVICES

The following current-awareness and literature-survey bibliographies are issued periodically by the Bureau:

**Cryogenic Data Center Current Awareness Service.** A literature survey issued biweekly. Annual subscription: Domestic, \$25.00; Foreign, \$30.00.

**Liquified Natural Gas.** A literature survey issued quarterly. Annual subscription: \$20.00.

**Superconducting Devices and Materials.** A literature survey issued quarterly. Annual subscription: \$30.00. Send subscription orders and remittances for the preceding bibliographic services to National Bureau of Standards, Cryogenic Data Center (275.02) Boulder, Colorado 80302.
