INTRODUCTION

The National Institute of Standards and Technology's National Voluntary Laboratory Accreditation Program (NVLAP) improves the competence of testing laboratories and the reliability of laboratory measurements. NVLAP determines laboratory ability to meet established criteria and technical requirements, for accreditation of specific test methods, through on-site assessments by technical experts and laboratory participation in proficiency testing programs. Publication of results of proficiency testing and participation in standards development contribute to improved test methods and laboratory performance.

The accredited laboratories have been found competent to perform the specific test methods shown. They have the skilled people, necessary facilities and equipment, documentation and quality assurance systems to produce reliable test data. We recommend that consideration be given to the use of these laboratories whenever their accredited testing capabilities satisfy testing needs.

This Directory lists laboratories that have been accredited, as of March 1, 1991, under the NVLAP procedures.

Current information on the accredited status of a laboratory can be obtained:

(1) directly from the laboratory;

(2) by writing to: Chief, Laboratory Accreditation Program
National Institute of Standards and Technology
Building 411, Room A146
Gaithersburg, MD 20899;

(3) by computer-to-computer communication with the NVLAP electronic bulletin board on 301-948-2058;

(4) by FAX on 301-975-3839; or

(5) by calling NVLAP on 301-975-4016.

D. Listing by NVLAP Lab Code Number	65

PROGRAM SUMMARY

The National Institute of Standards and Technology (NIST) administers the National Voluntary Laboratory Accreditation Program (NVLAP). NVLAP accredits public and private testing laboratories based on evaluation of their technical qualifications and competence for conducting specific tests or types of tests in specified fields of testing. Accreditation is based on criteria published in the Code of Federal Regulations as part of the NVLAP procedures. Accreditation is granted following successful completion of a process which includes submission of an application and payment of fees by the laboratory, an on-site assessment, resolution of any deficiencies identified during the on-site assessment, participation in proficiency testing, technical evaluation, and administrative review. The accreditation is formalized through issuance of a Certificate of Accreditation and Scope of Accreditation (fig. 1) and publicized by announcement in various government and private media.

NVLAP accreditation is available to commercial laboratories, manufacturers' in-house laboratories, university laboratories, and Federal, State, and local government laboratories. Foreign-based laboratories may also be accredited if they meet the same requirements as domestic laboratories and pay any additional fees required for travel expenses.

NVLAP provides an unbiased third party evaluation and recognition of performance, as well as expert technical assistance to upgrade laboratory performance. NVLAP accreditation means that the laboratory's quality system, staff, facilities and equipment, calibration procedures, test methods and procedures, records, and test reports have been evaluated and found to meet NVLAP criteria. NVLAP accreditation does not imply any guarantee (certification) of laboratory performance or product test data; it is solely a finding of laboratory competence.

A Directory of Accredited Laboratories is published once each year listing the name, address, contact person, phone number, accreditation renewal date and scope of accreditation for each accredited laboratory. An updated listing of accredited laboratories is published quarterly as a supplement to the Directory.

A laboratory may cite its accredited status and use the NVLAP logo on reports, stationery, and in business and trade publications provided that this use does not imply product certification.

Technical Experts

NVLAP uses technical experts to assess and evaluate the laboratories as described below. These individuals, knowledgeable in the testing field being evaluated, may be engineers or scientists currently active in the field, consultants, college professors or retired persons. They are selected on the basis of their professional and academic achievements, experience in the field of testing, management experience, and tact in dealing with people. Their services are generally contracted as required; they are not NVLAP staff members.

A technical expert is selected to conduct an on-site assessment of a particular laboratory on the basis of how well his/her individual experience matches the type of testing to be assessed, as well as absence of conflict of interest. The laboratory has the right to appeal the assignment of an expert and may request another expert.

Technical experts are also used to review the record of the laboratory as a whole, including the application, assessment report, deficiencies, corrections to deficiencies, and proficiency test results and, based on this record, to recommend whether or not a laboratory should be accredited. Again, technical experts are matched to the type of testing being evaluated and are selected to avoid conflict of interest.

On-Site Assessment

Before initial accreditation and periodically thereafter, an on-site assessment by a technical expert(s) of each laboratory is conducted to determine compliance with the NVLAP criteria. Assessors use checklists developed by NVLAP so that each laboratory receives an assessment comparable to that received by others.

However, assessors have considerable latitude to make judgments about a laboratory's compliance with the NVLAP criteria, based upon the assessor's experience and any unique characteristics of the laboratory.

The time needed to conduct an assessment varies from program to program. Assessments are conducted with as little disruption as possible to the normal operations of the laboratory. During the assessment, the assessor carries out the following functions:

- meets with management and supervisory personnel responsible for the laboratory's activities to review the assessment process and to set the assessment agenda;

- examines the laboratory's quality assurance system, selects and traces the history of one or more samples from receipt to final issuance of test reports, conducts a thorough review of the laboratory's quality manual or equivalent, evaluates the training program, examines notebooks or records pertaining to the samples, checks sample identification and tracking procedures, determines whether the appropriate environmental conditions are maintained, and examines copies of completed test reports;

- reviews records of periodic internal audits, use of check samples or participation in round robin testing or other similar programs, personnel records including resumes and job descriptions of key personnel, competency evaluations for all staff members who routinely perform the testing for which accreditation is sought, calibration or verification records for apparatus used, test reports, and sample control records;

- observes demonstrations of testing techniques and discusses them with the technical personnel to assure their understanding of the procedures; and

- examines major equipment, apparatus, and facilities.

At the conclusion of the assessment, the assessor conducts an exit briefing to discuss observations with appropriate laboratory staff and to call attention to any deficiencies uncovered.

If the on-site inspection reveals deficiencies that pertain to the NVLAP requirements, the assessor leaves written notification at the conclusion of the assessment and/or NVLAP sends a letter to the laboratory describing the specific items requiring attention. The laboratory must provide NVLAP with documentation or certification by the authorized representative that the specified deficiencies have been corrected or that specific actions are being taken to correct the deficiencies.

Monitoring Visits

Monitoring visits may be conducted at any time during the accreditation period for cause or on a random selection basis. These visits serve to verify reported changes in the laboratory's personnel, facilities, and operations or to explore possible reasons for poor performance in proficiency testing. The scope of a monitoring visit may range from checking a few designated items to a complete review.

Proficiency Testing

Proficiency testing is an integral part of the NVLAP accreditation process. On-site demonstration of appropriate facilities, equipment, personnel, etc. is essential, but may not be sufficient for the continuing evaluation of laboratory competence. The production of test data using special proficiency testing samples or artifacts provides NVLAP with a way to determine the overall competence of the laboratory.

Each program area has unique proficiency testing requirements. Data submitted by the laboratories in response to specific NVLAP requirements are analyzed and summary reports of the results of inter-laboratory comparisons are sent back to the participants. In a number of programs, NVLAP requires satisfactory proficiency testing as a condition of initial as well as continuing accreditation.

Satisfactory participation is based on the nature of specific test methods. Some test methods define pass/fail criteria. In other cases, individual laboratory test data must fall within statistically acceptable limits of overall group performance.

Proficiency testing helps to identify problems in a laboratory which NVLAP staff members work with the laboratory staff to solve. NVLAP provides results of proficiency testing to appropriate standards-writing bodies to assist them in improving test procedures.

Technical Evaluation

A final technical evaluation is performed by technical experts. Their recommendations are based on:

- information provided on the application;
- on-site assessment reports;
- actions taken by the laboratory to correct deficiencies;
- results of proficiency testing; and
- information from any monitoring visits of the laboratory.

If the technical evaluation reveals additional deficiencies, written descriptive notifications are sent to the laboratory. The laboratory must provide documentation or certification by its authorized representative that the specified deficiencies have been corrected. Clarification of some issues may be requested by telephone. All deficiencies must be corrected before accreditation can be granted or renewed.

Administrative Review

After the technical evaluation has been completed, NVLAP staff prepares an administrative recommendation to the Chief of the Laboratory Accreditation Program at NIST that the laboratory either be granted or denied accreditation. This recommendation is based on a review of the technical evaluation and other records to ensure that all NVLAP technical, financial and administrative obligations have been satisfied.

Accreditation Actions

Accreditation – if all accreditation requirements are satisfied.

Denial – if the laboratory does not meet NVLAP criteria and cannot do so in an appropriate time period, it is notified of a proposal to deny accreditation and the reason(s) therefor.

Suspension – if the terms of its accreditation are in temporary non-compliance, but deficiencies can be corrected in an acceptable time period, the laboratory will be notified of the reasons for and conditions of the suspension and the action(s) that the laboratory must take to have accreditation reinstated.

Revocation – if the terms of its accreditation have been violated and deficiencies cannot or will not be corrected, the laboratory is notified of a proposal to revoke accreditation and the reasons therefor and may be given the option of voluntarily terminating accreditation. If accreditation is revoked, the laboratory must return its Certificate of Accreditation and cease use of the NVLAP logo on any of its reports, other correspondence, or advertising.

If denial or revocation has been proposed, the laboratory may request a hearing, under United States Code 5 U.S.C. 556, within 30 days of the date of receipt of the notification. If a hearing is not requested, the action becomes final upon the expiration of that 30-day period.

Accreditation Renewal Date

The period of NVLAP accreditation is one year. A laboratory can be accredited until January 1, April 1, July 1, or October 1 of the following year; its accreditation will terminate on that date unless renewed to remain in force. Users of this Directory who are considering selection of accredited laboratories should be aware of the renewal date and verify if the laboratory has retained its accreditation, for applicable test methods, at the time its services are to be provided. Verification can be made by asking the laboratory for a copy of its Certificate of Accreditation or by contacting NVLAP.

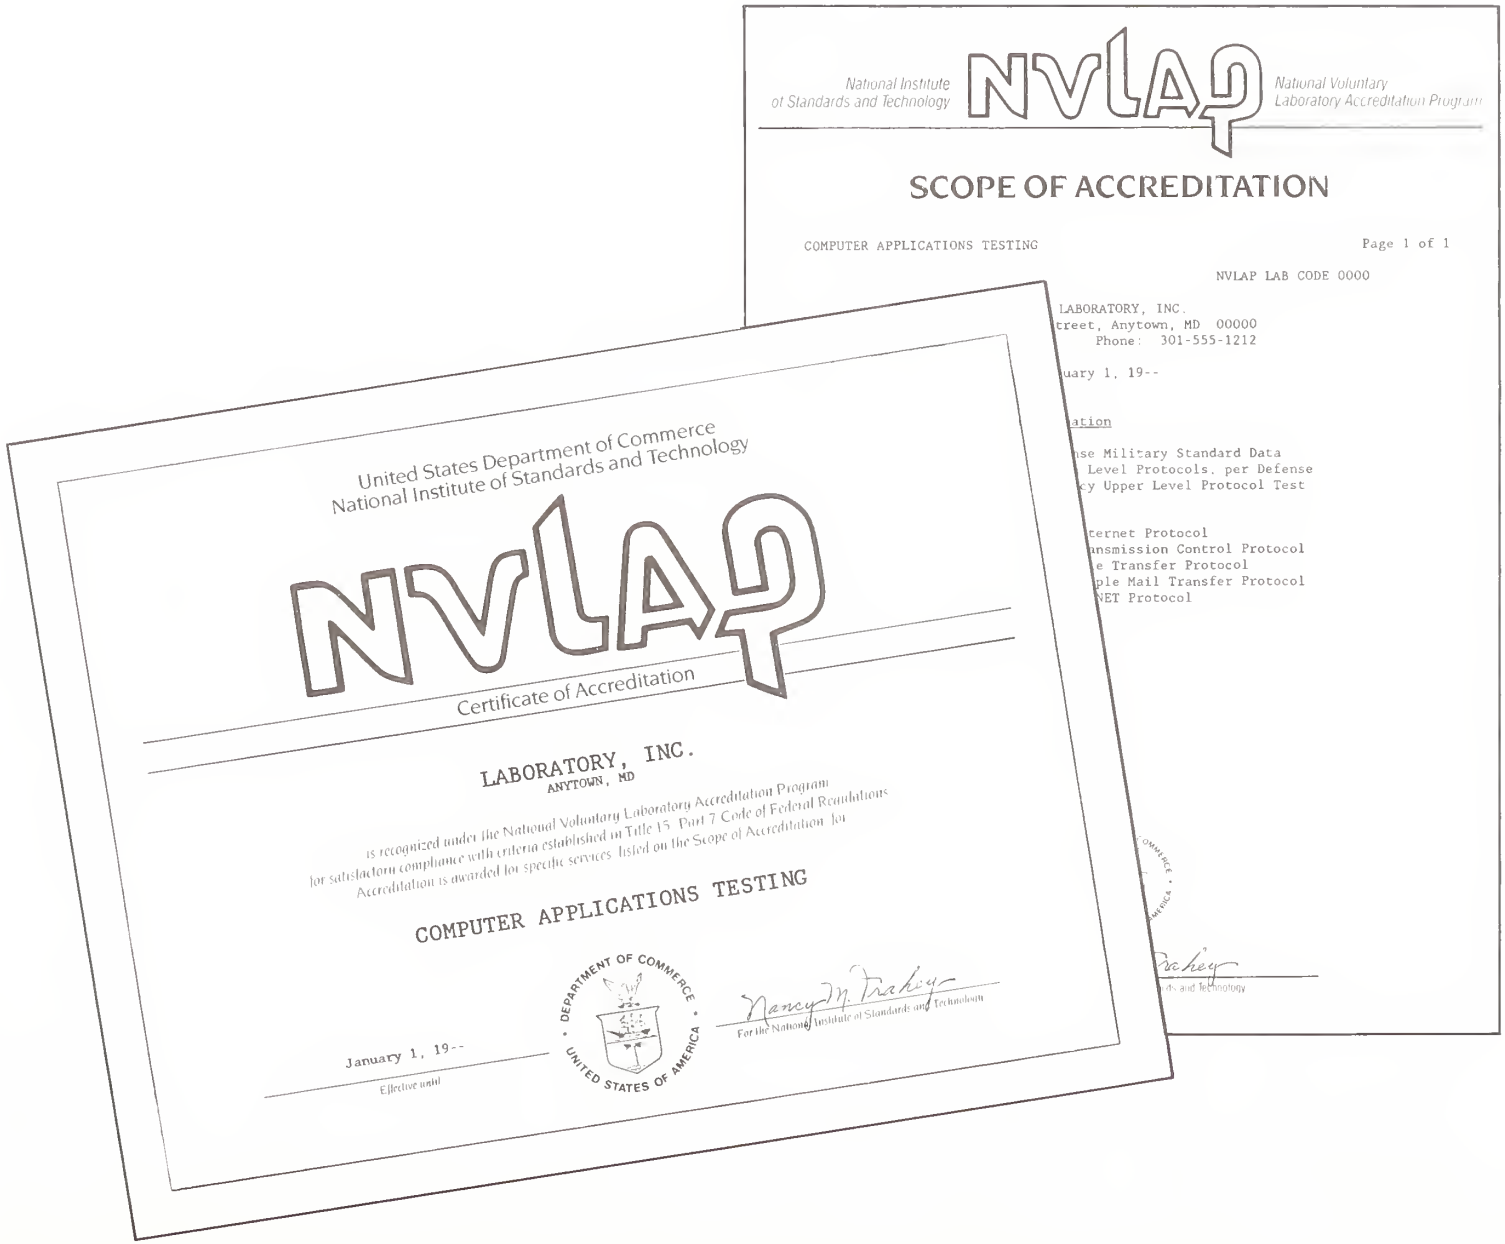

Figure 1. NVLAP Certificate and Scope of Accreditation (sample).

LABORATORY PARTICIPATION SUMMARY

The following table summarizes NVLAP accreditation as of March 1, 1991. Since some laboratories are accredited in more than one field of testing, the total number of accredited laboratories listed by field (see Index B) is greater than the number of laboratories in the system (see Index A). The NVLAP Code prefix is used in Index D to identify individual test methods.

Field of Testing (NVLAP Code Prefix)	*Accredited Laboratories as of March 1, 1991*
Acoustical Testing Services (08/)	9
Asbestos Fiber Analysis (18/)	
Airborne (TEM)	132
Bulk (PLM)	668
Carpet Testing (03/)	20
Commercial Products Testing	
Paint (09/)	4
Paper (09/)	3
Plastics (15/)	1
Seals/Sealants (13/)	3
Computer Applications Testing (17/)	6
Construction Testing Services (02/)	
Admixtures	0
Aggregates	27
Cement	4
Concrete	27
Geotextiles	1
Road and Paving	8
Soil/Rock	21
Electromagnetic Compatibility & Telecomm. (12/)	
FCC	24
Mil-Std-462	13
Personnel Radiation Dosimetry Processing (05/)	62
Solid Fuel Room Heaters (04/)	3
Thermal Insulation Materials Testing (01/)	26

HOW TO USE THIS DIRECTORY

The *1991 Directory of Accredited Laboratories* lists laboratories accredited by NVLAP as of March 1, 1991. It consists of four indexes which are cross-referenced by NVLAP Lab Code, a unique identifier assigned to each laboratory; e.g., 1000 or 1000-00.

The Directory enables the user to locate name, address, telephone and accreditation information about laboratories of interest. The user should contact the laboratories directly to get information beyond that provided here.

INDEX A, LISTING BY LABORATORY NAME, lists all accredited laboratories in alphabetical order by laboratory name. An ellipsis (...) after a laboratory's name indicates that the name was too long to fit within the available space. (The ellipsis notation is also used in Indexes B and C.) The full laboratory name is given in Index D, Listing by NVLAP Lab Code Number.

INDEX B, LISTING BY FIELD OF TESTING, lists all accredited laboratories in alphabetical order by laboratory name within field of testing. The index is organized by the 10 major NVLAP program areas (see page 5). In addition, three program areas, Asbestos Fiber Analysis, Commercial Products Testing, and Electromagnetic Compatibility and Telecommunications, are subdivided into their respective testing categories. Laboratories accredited in more than one field of testing will have more than one listing.

INDEX C, LISTING BY STATE, lists all accredited laboratories in alphabetical order by laboratory name within state. The states are designated by the standard two-letter postal abbreviations. Laboratories located outside of the United States are listed at the end of the index. Index C also indicates the major field(s) of testing (abbreviated) for which each laboratory is accredited.

INDEX D, LISTING BY NVLAP LAB CODE NUMBER, lists all accredited laboratories in numerical order by NVLAP Lab Code. There is only one listing per Lab Code in Index D. The following information is presented for each laboratory:

(a) NVLAP Lab Code
(b) Laboratory name and address
(c) Contact person
(d) Phone number
(e) Accreditation renewal date
(f) Scope of accreditation for each field of testing (list of specific test methods for which a laboratory is accredited).

HOW TO LOCATE SPECIFIC INFORMATION

For a laboratory whose name is known

Refer to Index A and note the laboratory's NVLAP Lab Code. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, scope of accreditation, etc.

For a laboratory in a particular geographic area

Determine the states (or country) included in the geographic area of interest. Refer to Index C to obtain the NVLAP Lab Code of a laboratory within the selected geographic area for a given field of testing. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, scope of accreditation, etc.

For a laboratory in a particular field of testing

Choose the field of testing from the list on page 5. Refer to Index B and note the name and Lab Code of each laboratory of interest. Index B is organized by the 10 major field of testing categories, as well as subcategories for the Asbestos Fiber Analysis, Commercial Products Testing, and Electromagnetic Compatibility and Telecommunications programs. Look up the Lab Code in Index D to obtain specific information about the laboratory; e.g., address, phone number, scope of accreditation, etc.

SPECIAL NOTE ABOUT LABORATORIES ACCREDITED IN ASBESTOS FIBER ANALYSIS

The scopes of accreditation for laboratories accredited in Asbestos Fiber Analysis in Index D begin with NVLAP Lab Code 1001. The presence of a PLM Renewal Date or a TEM Renewal Date indicates that a laboratory is accredited for Bulk Asbestos Analysis (PLM) or Airborne Asbestos Analysis (TEM), respectively. The detailed description of the test method designations for PLM and TEM are printed at the beginning of the Asbestos section of Index D on page 110, rather than in the individual laboratory entries.

Accreditation Renewal Date: October 1, 1991

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Panasonic Automatic reader model UD710A.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI-N13.11-1983 through testing.

Panasonic TLD model UD812-AS2 for ANSI-N13.11 categories II, IV, VI, VII.

The dosimeter is housed in a custom made plastic clam shell type holder with filtering of 4mg/cm^2 mylar over elements 1 & 2, 140 mg/cm^2 plastic over element 3, and 840 mg/cm^2 plastic over element 4.

NVLAP LAB CODE 0512

RADIATION DETECTION COMPANY
P.O. Box 1414, 162 Wolfe Road
Sunnyvale, CA 94088
Richard H. Holden Phone: 408-735-8700

Accreditation Renewal Date: October 1, 1991

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing (1) Teledyne 7300 reader; (2) Harshaw 3000 reader; (3) Victoreen 2800 reader; (4) by manual film processing and reading on a Macbeth TD502 densitometer; or (5) Tracketch, NTA manual optical readers.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI-N13.11-1983 through testing.

Designation	*Process*	*ANSI-N13.11 Categories*
Hi Energy TLD	1*	II, IV
Beta TLD	1*	V, VII
Lo Energy TLD	1*	I, III, VI
TLD Albedo	1*,4	VIII
Film XBG	4	I, II, III, IV, V, VI, VII
Film XBGN	4,5	VIII
Neutron Tracketch	5	VIII
Beta/gamma Albedo TLD	1*	II, IV, V, VII
TLD-Beta/gamma Albedo/Tracketch	1*,5	II, IV, V, VII, VIII

* Processes listed above, 2 and 3, are considered functionally acceptable as substitutes which can be used in lieu of process 1 as listed above.

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Panasonic Automatic reader model UD710A and Panasonic Manual reader UD702E.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI-N13.11-1983 through testing.

Panasonic TLD model UD802 in either a Panasonic UD854A or 874A holder for ANSI-N13.11 categories I, II, III, IV, V, VI, VII, VIII.

The following sites are included in the accreditation by virtue of using identical equipment and procedures as indicated above:

Robinson Nuclear Plant, Hartsville, South Carolina
Brunswick Nuclear Plant, Southport, North Carolina
Harris Nuclear Project, New Hill, North Carolina

NVLAP LAB CODE 0518

TECH/OPS LANDAUER
2 Science Road, Glenwood, IL 60425
R. Craig Yoder Phone: 708-755-7000

Accreditation Renewal Date: October 1, 1991

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing (1) automatic film reader Tech/Ops Model 1; (2) Harshaw Atlas Hotgas reader/modified Atlas reader with Apollo Systems CO_2 laser; (3) Harshaw 2271 reader; (4) NTA/Polycarbonate /CR-39 manual optical readers; (5) manual densitometers X-Rite, Tech/Ops Model 301, Macbeth Model TD504 or (6) ALNOR Dosacus reader.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI-N13.11-1983 through testing.

Landauer designation:

Film	*Process*	*ANSI-N13.11 Category*
G–Film "GARDRAY"	1,5	I thru VII
P–G badge plus NTA	1,4,5	VIII
A–G badge plus polycarbonate	1,4	VIII
R–G badge plus ER	1,3,4,5	VIII
R–G badge plus ALNOR ER(M)	1,4,5,6	VIII
B–G badge plus CR 39	1,4,5	VIII
TLD		
L–4 chip "GARDRAY"	2	I thru VIII
D–3 700 chip Harshaw card	3	II, IV, V, VII
K–Modified ALNOR(K)	6	I thru VII
W modified – 2 chip Escort with x-ray filtration (J)	2	I, II

The facility is accredited to process the following dosimeters which have been deemed functionally acceptable by virtue of using identical techniques and equipment to process combinations of elements demonstrated above.

Landauer designation:

Film	*Process*	*ANSI-N13.11 Category*
B–G badge plus CR-39	1,4,5	I thru VII
C–G badge plus CR-39 and Cadmium	1,4,5	I thru VIII
P–G badge plus NTA	1,4,5	I thru VII
H–G badge plus NTA and Cadmium	1,4,5	I thru VIII
A–G badge plus polycarbonate	1,4,5	I thru VII
J–G badge plus polycarbonate and Cadmium	1,4,5	I thru VIII
Y–G badge plus Cadmium	1,4,5	I, VII
R–G badge plus Harshaw ER	1,3,4,5	I thru VII
R–G badge plus ALNOR ER	1,4,5,6	I thru VII
Q–DEX-RAY	1,4,5	I, VII
TLD		
F–L badge plus CR-39	2,4	I thru VIII
F–L badge plus polycarbonate	2,4	I thru VIII
F–L badge plus ER	2,3,4	I thru VIII
Z–K badge plus CR-39	4,6	I thru VIII
Z–K badge plus polycarbonate	4,6	I thru VII
S–K badge plus ER	4,6	I thru VIII
M–K badge (TLD 700 chips)	6	I thru VII

The following site is included as a TECH/OPS Landauer, Inc. Nuclear Station System (NSS) site:

Alabama Power, Farley Nuclear Plant, Ashford, Alabama.

The following sites are included to perform limited volume, emergency response processing employing either a Harshaw 3000 manual reader or manual film processing techniques for the following badges:

	ANSI-N13.11 Category
G–Film "GARDRAY"	I thru VII
L–TLD 4 chip "GARDRAY"	I thru VII
K–TLD 3 chip ALNOR	I thru VII

NIST-114A
(REV. 3-90)

U.S. DEPARTMENT OF COMMERCE
NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY

BIBLIOGRAPHIC DATA SHEET

1. PUBLICATION OR REPORT NUMBER
NIST/SP-810

2. PERFORMING ORGANIZATION REPORT NUMBER

3. PUBLICATION DATE
April 1991

4. TITLE AND SUBTITLE

1991 Directory of Accredited Laboratories
(National Voluntary Laboratory Accreditation Program)

5. AUTHOR(S)

Nancy M. Trahey, Vanda R. White, Jeffrey Horlick

6. PERFORMING ORGANIZATION (IF JOINT OR OTHER THAN NIST, SEE INSTRUCTIONS)

U.S. DEPARTMENT OF COMMERCE
NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY
GAITHERSBURG, MD 20899

7. CONTRACT/GRANT NUMBER

8. TYPE OF REPORT AND PERIOD COVERED
Final

9. SPONSORING ORGANIZATION NAME AND COMPLETE ADDRESS (STREET, CITY, STATE, ZIP)

Same as item #6

10. SUPPLEMENTARY NOTES

11. ABSTRACT (A 200-WORD OR LESS FACTUAL SUMMARY OF MOST SIGNIFICANT INFORMATION. IF DOCUMENT INCLUDES A SIGNIFICANT BIBLIOGRAPHY OR LITERATURE SURVEY, MENTION IT HERE.)

The annual Directory provides a listing of laboratories accredited as of March 1, 1991, by the National Institute of Standards and Technology, National Voluntary Laboratory Accreditation Program (NVLAP). The names of approximately 900 laboratories in 15 fields of testing are included.

A brief description of the NVLAP program is given and a summary of laboratory participation is provided. To aid the user, indexes cross reference the laboratories by company name, NVLAP Lab Code Number, field of testing, and geographic location (state or country). A listing of the test methods (scope of accreditation) is provided for each laboratory.

12. KEY WORDS (6 TO 12 ENTRIES; ALPHABETICAL ORDER; CAPITALIZE ONLY PROPER NAMES; AND SEPARATE KEY WORDS BY SEMICOLONS)

accreditation; acoustics; asbestos; carpet; computer applications; construction; directory; dosimetry; electromagnetic compatibility; laboratory; paint; paper; plastics; radiation; sealants; seals; stoves; telecommunications; thermal insulation

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in those disciplines of the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences.
Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published quarterly for NIST by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements are available from ACS, 1155 Sixteenth St., NW., Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NIST research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.
Order the **above** *NIST publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.*
Order the **following** *NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.*

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency Reports (NISTIR)—A special series of interim or final reports on work performed by NIST for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
