SURFACE WATER SUPPLY OF HAWAII, JULY 1, 1936, to JUNE 30, 1937

SCOPE OF WORK

This volume contains results of measurements of the flow of streams and ditches in the Territory of Hawaii during the year ending June 30, 1937. Since the beginning of stream-gaging work in Hawaii in 1910 records of flow of streams and ditches have been obtained at about 480 stations for periods ranging from a few months to 26 years. In addition hundreds of miscellaneous measurements have been made, and rather extensive studies of ground water have been made in Kau, Hawaii,<sup>1</sup> and on the islands of Oahu,<sup>2</sup> Maui, Molokai, and Lanai.

In this volume are given the records of daily flow that were obtained at stations that were operated during the year ending June 30, 1937, and the results of miscellaneous measurements of stream flow made during that year. The results of ground-water studies will be published in bulletins of the Territorial Division of Hydrography. See "Publications", on page 3, for a record of surface water-supply papers pertaining to Hawaii.

DEFINITION OF TERMS

The units in which stream-flow data are presented in this report are defined as follows:

"Second-feet" is an abbreviation for "cubic feet a second." A second-foot is the rate of discharge of water flowing in a channel having a cross-sectional area of 1 square foot and an average velocity of 1 foot a second.

An "acre-foot" is equivalent to 43,560 cubic feet and is the quantity required to cover an acre to the depth of 1 foot. The term is commonly used in connection with storage for irrigation.

In the Territory of Hawaii the unit most commonly used in measuring water is the "million gallons." This is used with two meanings—(1) to indicate a rate of flow and (2) to express an actual quantity of water. In the former sense "million gallons a day" is inferred, 1,000,000 gallons being taken as the unit of quantity and 24 hours as the unit of time. With this meaning the term is generally used in connection with pumping and irrigation. In the latter sense "million gallons" as an absolute quantity is used in the measurement of storage capacities of reservoirs.

The following convenient approximate relations exist between second-feet, million gallons a day, and acre-feet: 1 second-foot flowing 24 hours equals about 2 acre-feet; 1,000,000 gallons equals about 3 acre-feet or about 1.55 second-feet.

EXPLANATION OF DATA

The base data collected at gaging stations consist of records of stage, measurements of discharge, and general information used to supplement the gage heights and discharge measurements in determining the daily discharge. The records of stage are obtained from water-stage recorders that give continuous records of the fluctuations. Measurements of

<sup>1</sup> Stearns, H. T., and Clark, W. O., Geology and water resources of the Kau district, Hawaii: U. S. Geol. Survey Water-Supply Paper 616, 1930.

<sup>2</sup> Stearns, H. T., and Vakesvik, K. N., Geology and ground-water resources of Oahu, Hawaii: T. H. Division of Hydrography Bull. 1, 1935: Records of the drilled wells on Oahu, Hawaii: Idem, Bull. 4, 1936. Stearns, N. D., Annotated bibliography and index of geology and water supply of Oahu, Hawaii: T. H. Division of Hydrography, Bull. 3, 1935.

discharge are usually made with a current meter by the general methods outlined in standard textbooks on the measurement of river discharge. Rating tables giving the discharge for any stage are prepared from the discharge measurements. The application of the daily gage heights to these rating tables gives the discharge from which the daily, monthly, and yearly discharges are determined. Occasionally discharge is determined from a weir or a rating flume, using standard formulas, and for a few stations the high-water discharge has been determined by the use of models.

The data presented in this report comprise, for each gaging station, a description of the station, a table showing the daily discharge of the stream, and a table of monthly and yearly discharge and run-off. Skeleton rating tables are published except for ditch stations. All rates of flow are expressed as million gallons a day.

The description of the station gives location, drainage area, records available, discharge corresponding to maximum and minimum recorded stages, average discharge if there has been more than 10 years of record, and, under "Remarks", notes on accuracy of the records, diversions that decrease the flow at the gage, and artificial regulation.

The table of daily discharge gives, in general, the discharge corresponding to the mean daily gage heights. But when, owing to sudden or rapid diurnal fluctuation, the discharge obtained from the rating table by applying the mean daily gage height would not be within 5 per cent of the true mean, the mean has been obtained by averaging discharges for intervals during the day or by use of the discharge integrator.

In the table of monthly discharge the column headed "Maximum" gives the flow for the day when the total discharge was greatest. This does not correspond to the rate of flow at the crest of the flood. The maximum rate of flow is given in the station description under the heading "Extremes", and the corresponding stage is always taken from the water-stage recorder graph unless otherwise noted. Likewise, in the column headed "Minimum" the quantity given is the flow for the day when the total discharge was least. The columns headed "Mean" give the average flow in million gallons a day and cubic feet a second during the month. The "total run-off in million gallons" is the sum of the daily flows, and the "total run-off in acre-feet" is computed from the total monthly discharges in million gallons a day.

#### ACCURACY OF FIELD DATA AND COMPUTED RESULTS

The accuracy of stream-flow data depends primarily (1) on the permanency of the stage-discharge relation, and (2) on the accuracy of observation of stage, measurements of flow, and interpretation of records.

A general statement under "Remarks" gives the accuracy of records, the terms "excellent", "good", "fair", and "poor" indicating that the record is probably accurate within 5, 10, 15, and 20 per cent, respectively.

It should be borne in mind that the observations in each succeeding year may be expected to throw new light on data previously published.

Computations are carried to not more than three significant figures, except that monthly and yearly total run-off (million gallons and acre-feet) above 10,000 are carried to four significant figures.

## PUBLICATIONS

The following table gives by years the serial numbers of the papers on the surface-water supply of Hawaii published from 1903 to 1937, and, used in conjunction with the list of stations maintained, given in Water-Supply Paper 795, provides a convenient index for finding the data for any station. The data for any particular station will be found in the reports covering the years during which that station was maintained, unless, owing to undeveloped rating curves, publication has been postponed. Occasionally data are revised and republished in later papers. Miscellaneous discharge measurements made during any year at points other than regular gaging stations are included in the data published for that year.

## RECORDS OF DISCHARGE COLLECTED BY AGENCIES OTHER THAN THE GEOLOGICAL SURVEY

The following table contains a list of gaging stations in the Territory of Hawaii at which records of discharge were collected by agencies other than the Geological Survey during the fiscal year July 1936 to June 1937. The records for these stations are not contained in the publications of the Geological Survey.

## Records of discharge collected by agencies other than the Geological Survey

## ISLAND OF KAUAI

Stream	Location	Period	Operated by
Anahola ditch, Lower....	Near Government Road near Anahola.	1925-37	East Kauai Water Co.
East Lawai ditch.....	Near Government Road near Kalaeo.	1924-37	McBryde Sugar Co.
Kleele ditch.....	Near Government Road near Kalaeo.	1924-37	Do.
Hanalei ditch.....	Above Kalihiwai Reservoir, near Kilauea.	1923-37	Kilauea Sugar Plantation Co.
Hanamaulu ditch.....	Below intake, near Hanamaulu.	1925-37	Lihue Plantation Co.
Hanapepe ditch.....	At Makaweli Plantation boundary near Makaweli.	1926-37	Hawaiian Sugar Co.
Hanapepe Field ditch....	Below Hanapepe River intake near Kleele.	1924-37	McBryde Sugar Co.
Hanapepe Stream.....	At tidewater near Kleele.	1924-37	Do.
Kamoola ditch.....	Near Koloa boundary, near Koloa.	1924-37	Do.
Kapaa River diversion to field 8 reservoir.	Near Hanamsamu.....	1926-37	Lihue Plantation Co.
Kapaa River diversion to field 29.	Near Lihue.....	1927-37	Do.
Lawai Stream.....	½ mile above cannery near Kalaeo.	1924-37	McBryde Sugar Co.
Lihue Lower ditch.....	Below intake, near Lihue.	1925-37	Lihue Plantation Co.

Records of discharge collected by agencies other than the Geological Survey--Continued

## ISLAND OF KAUAI--Continued

Stream	Location	Period	Operated by
Lihue upper ditch.....	Below intake, near Lihue....	1925-37	Lihue Plantation Co.
Lumahai Stream.....	Near Hanalei, at altitude about 800 feet.	1934-37	McBryde Sugar Co.
Makaleha ditch.....	Near Mimino Reservoir, near Kealia.	1925-37	East Kauai Water Co.
Old Tunnel ditch.....	Above confluence with main Koloa ditch, near Koloa.	1925-37	Koloa Sugar Co.
Olokele ditch.....	At power-house near Makaweli.	1926-37	Hawaiian Sugar Co.
Stable storm ditch.....	At Stable Camp road crossing near Lihue.	1931-37	Lihue Plantation Co.
Storm ditch.....	Above Kalalaeo-Lihue main highway near Koloa.	1926-37	Koloa Sugar Co.
Wahiawa Stream.....	Above Alexander Reservoir, near Kalalaeo.	1924-37	McBryde Sugar Co.
Wahiawa Stream, East Branch.....	....do.....	1929-37	Do.
Waiahi River.....	Above Lihue ditch intake, near Lihue.	1925-37	Lihue Plantation Co.
Wainiha ditch.....	Near Flume 4, near Kapaa..	1922-37	East Kauai Water Co.
Wainiha Stream.....	Near Hanalei, at altitude about 820 feet.	1927-37	McBryde Sugar Co.
West Lawai ditch.....	Near camp 12 near Kalalaeo.	1924-37	Do.

## ISLAND OF OAHU

*Alewa Heights Spring.....	Below reservoir 3.....	1932-37	Board of Water Supply City and County of Honolulu.
*Booth Springs.....	In Pauao Valley, at altitude 685 feet.	1929-37	Do.
Helemano ditch.....	About 3 miles below Upper Helemano Reservoir.	1933-37	Waialua Agricultural Co.
*Hering Springs.....	In Makiki Valley, at altitude 970 feet.	1925-37	Board of Water Supply City and County of Honolulu.
*Kahuawai Springs.....	In Paane Valley, at altitude, 612 feet.	1925-37	Do.
*Kalihii tunnels.....	At diversion, at altitude 650 feet.	1926-37	Do.
Kamananui ditch.....	In Kawailoa Gulch about 500 yards above third siphon from Government Road.	1934-37	Waialua Agricultural Co.
Kipapa Stream.....	At altitude 375 feet.....	1917-37	Waishole Water Co.
*Makiki Springs.....	In Makiki Valley, at altitude 350 feet.	1926-37	Board of Water Supply City and County of Honolulu.
*Manoa tunnels.....	Upper Manoa Valley.....	1925-37	Do.
*Nuuanu tunnels.....	At Lower Luakaha.....	1926-37	Do.
*Nuuanu tunnel 3.....	At overflow, in upper Nuuanu Valley.	1931-37	Do.
*Palolo tunnel.....	Upper Palolo Valley.....	1926-37	Do.
Wahiawa Reservoir outlet...	About 1,200 feet below dam.	1906-9, 1912-37	Wahiawa Water Co.
Waiahole Stream.....	At altitude 250 feet.....	1919-37	Waiahole Water Co.
Waiahole tunnel.....	At adit 8.....	1916-37	Do.
Waiau Stream.....	At altitude 750 feet.....	1917-37	Do.
Waikakalau Stream.....	....do.....	1917-37	Do.

## ISLAND OF MAUI (East Maui)

Banana Spring.....	Near east wall of Keanae Valley, at altitude 700 feet.	1933-37	East Maui Irrigation Co...
Hanawi Stream.....	In low-water channel of Hanawi Gulch near Nahiku, at altitude 650 feet.	1933-37	Do.
Hanawi Spring upper high-level.	On east side of pali in Hanawi Gulch near Nahiku, at altitude 675 feet.	1932-37	Do.
Hanawi Spring lower high-level.	On east side of pali in Hanawi Gulch near Nahiku, at altitude 575 feet.	1932-37	Do.
Makapipi ditch.....	At west edge of Makapipi Gulch near Nahiku, at altitude 1,300 feet.	1933-37	Do.
Oheo Spring.....	In Keanae Valley along Belt road, 5/4 mile east of Keanae P. O., at altitude 200 feet.	1933-37	Do.

## ISLAND OF MAUI (West Maui)

Everett ditch.....	Below intake, near Wailuku.	1935-37	Wailuku Sugar Co.
Iao pipe line.....	....do.....	1933-37	County of Maui.
Iao-Waikapu ditch.....	At lower end of tunnels near Wailuku.	1923-37	Wailuku Sugar Co.
Kama ditch.....	Below intake, near Wailuku.	1935-37	Do.
Maniania ditch.....	....do.....	1923-37	Do.
North Waiehu ditch.....	Near end of Waiehu Camp road, near Wailuku.	1922-37	Do.

\*Published in Biennial Reports of Honolulu Sewer & Water Commission and of Board of Water Supply City and County of Honolulu.

\*Records for some earlier years published in water-supply papers of Geological Survey.

†Records for 1915-20 published in water-supply papers of Geological Survey.

Note.— Records not published unless otherwise indicated.

## COOPERATION

The work during the year ending June 30, 1937, was done under cooperative agreement with the Territory of Hawaii through the commissioner of public lands and the Board of Water Supply City and County of Honolulu. Assistance in collecting records was rendered also on the island of Kauai by the Kekaha Sugar Co., Ltd., the McBryde Sugar Co., Ltd., the East Kauai Water Co. Ltd., the Kilauea Sugar Co. Ltd., and the Lihue Plantation Co. Ltd.; on the island of Oahu by the Wahiawa Water Co. Ltd.; on the island of Maui by the Pioneer Mill Co. Ltd., and the East Maui Irrigation Co. Ltd., and on the island of Hawaii by the City of Hilo Waterworks, the Kohala Ditch Co. Ltd., and the Olao Sugar Co. Ltd.

Acknowledgment of records collected by individuals or corporations is made in connection with the description of each station for which such records were furnished.

## DIVISION OF WORK

The data were collected and prepared for publication under the direction of M. H. Carson, district engineer, Honolulu, Hawaii.

## ISLAND OF KAUAI

## Waimea River below Kekaha ditch intake, near Waimea

Location. - Water-stage recorder, lat. 22°02'40", long. 159°38'35", in Waimea Canyon, 500 feet below Kekaha ditch intake and 6½ miles northeast of Waimea. Altitude, 490 feet, by barometer.

Drainage area. - 45.0 square miles.

Records available. - July 1921 to June 1937.

Average discharge. - 12 years (1925-37), 40.9 million gallons a day (63.3 second-feet).

Extremes. - Maximum discharge during year, 5,500 million gallons a day (8,590 second-feet) a day; minimum, 0.04 million gallons a day (0.06 second-foot) Oct. 2-18.

1921-37: Maximum discharge, 10,700 million gallons a day (16,600 second-feet) Dec. 24, 1927 (gage height, 20.40 feet), from rating curve extended above 350 million gallons a day; no flow occasionally, owing to regulation.

Remarks. - Records fair for medium stages and poor for all extremely high and low stages. Kokée and Kekaha ditches divert above station, taking practically all the water at low and medium stages for irrigation near Waimea and Kekaha.

Rating tables, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

July 1 to Mar. 19

## Kawaikoi Stream near Waimea

Location.- Water-stage recorder, lat.  $22^{\circ}08'00''$ , long.  $159^{\circ}37'15''$ , at old trail crossing,  $\frac{1}{2}$  miles northeast of Waimea. Altitude, 3,420 feet, by barometer.

Drainage area.- 4.1 square miles.

Records available.- April 1909 to June 1937. July 1917 to July 1919 (unpublished).

Average discharge.- 18 years (1919-37), 21.6 million gallons a day (33.4 second-feet).

Extremes.- Maximum discharge during year, 2,460 million gallons a day (3,810 second-feet) Mar. 18 (gage height, 9.07 feet), from rating curve extended above 200 million gallons a day; minimum, 2.3 million gallons a day (3.6 second-feet) July 3.

1909-37: Maximum discharge, that of Mar. 18, 1937; minimum, 1.3 million gallons a day (2.0 second-feet) Sept. 15, 1921.

Highest known stage, 15.2 feet, Dec. 18, 1916 (discharge not determined).

Remarks.- Records for ordinary stages are good; those for extremely high stages and for period Sept. 29 to Oct. 21, which were computed on basis of records for stations on Waiahulu Stream and Kokee ditch are poor.

## Mohihi Stream at altitude 3,500 feet, near Waimea

Location.— Water-stage recorder, lat.  $22^{\circ}07'05''$ , long.  $159^{\circ}36'15''$ , at altitude 3,500 feet at upper trail crossing, 3.8 miles northeast of confluence of Waiahulu and Poomau Streams and 12 miles northeast of Waimea.

Drainage area.— 1.6 square miles.

Records available.— June 1920 to October 1926 and October 1936 to June 1937. April 1909 to December 1912 at site 2 miles downstream (fragmentary).

Extremes.— Maximum discharge during period October 1936 to June 1937, 246 million gallons a day (381 second-feet) Mar. 19 (gage height, 4.40 feet), from rating curve extended above 25 million gallons a day; minimum, 0.7 millions a day (1.1 second-feet) June 25, 1920-26, 1936-37: Maximum discharge recorded, 520 million gallons a day (805 second-feet) Jan. 16, 1921 (gage height, 6.91 feet, present datum), from rating curve extended above 25 million gallons a day; minimum recorded, 0.2 million gallons a day (0.3 second-foot) July 16, 1921, Sept. 14, 15, 1921, Aug. 7, 8, 1922, May 16, 1926.

Remarks.— Records good except those for Oct. 18 to Nov. 9, which were computed on basis of records for nearby stations and are poor. No diversions.

## Kokee ditch near Waimea

Location.— Water-stage recorder, lat.  $22^{\circ}06'25''$ , long.  $159^{\circ}40'45''$ , 1,000 feet west of road and 10½ miles north of Waimea. Altitude, 3,310 feet, by barometer.

Records available.— September 1926 to June 1937.

Average discharge.— 10 years (1927-37), 18.6 million gallons a day (28.8 second-feet).

Extremes.— Maximum discharge during year, 67 million gallons a day (104 second-feet) Oct. 27 (gage height, 2.60 feet); no flow Dec. 24, Feb. 4, 23, when water was shut out of ditch.

1926-37: Maximum discharge, 75 million gallons a day (113 second-feet) Dec. 21, 1933 (gage height, 2.83 feet); no flow occasionally, when water was shut out of ditch just above weir.

Remarks.— Records excellent except those for June 15-27, which were computed on basis of twice-daily gage readings and are fair, and those for Aug. 25, Oct. 22 to Nov. 2, Nov. 19-24, Mar. 1-14, which were computed on basis of records for stations on Kawaikoi Stream. Kokee ditch at altitude 3,400 feet diverts water from all streams tributary to Waimea River west of Mohihi Stream for irrigation near Kehaha. Flow regulated by head gates.

## ISLAND OF KAUAI

## Waiahulu Stream near Waimea

Location.— Water-stage recorder and crude masonry-dam control, lat.  $22^{\circ}04'45''$ , long.  $159^{\circ}39'15''$  in Waimea Canyon, half a mile above confluence with Koae Stream and  $8\frac{1}{2}$  miles north of Waimea. Altitude, 890 feet, by barometer.

Drainage area.— 20.0 square miles.

Records available.— February to October 1916, October 1917 to June 1918, May 1925 to June 1937. July 1918 to November 1920 at same site (fragmentary and unreliable; unpublished).

Average discharge.— 12 years (1925-37), 28.7 million gallons a day (44.4 second-feet).

Extremes.— Maximum discharge during year, 1,280 million gallons a day (1,980 second-feet) Mar. 18 (gage height, 6.58 feet), from rating curve extended beyond 400 million gallons a day; minimum, 8.6 million gallons a day (13.3 second-feet) Oct. 15.18.

1916, 1917-18, 1925-37: Maximum discharge, 2,550 million gallons a day (3,950 second-feet) Dec. 24, 1927 (gage height, 9.92 feet), from rating curve extended beyond 400 million gallons a day; minimum, 5.2 million gallons a day (8.0 second-feet) Nov. 4, 1927.

Remarks.— Records good for ordinary stages and poor for high stages. Kokee ditch diverts water above station for irrigation near Kekaha.

## ISLAND OF KAUAI

11

## Kekaha ditch at camp 1, near Waimea

Location.— Water-stage recorder, lat.  $22^{\circ}02'35''$ , long.  $159^{\circ}38'30''$ , in Waimea Canyon, a quarter of a mile below lower intake and  $6\frac{1}{4}$  miles northeast of Waimea. Altitude, 520 feet, by barometer.

Records available.— November 1907 to June 1937.

Average discharge.— 18 years (1918-24, 1925-37), 37.3 million gallons a day (57.7 second-feet).

Extremes.— Maximum discharge during year, 70 million gallons a day (108 second-feet) Oct. 22 (gage height, 4.03 feet); minimum, 0.52 million gallons a day (0.80 second-foot) July 12.

1907-37: Maximum discharge, 71 million gallons a day (110 second-feet) Apr. 25, 1928 (gage height, 4.33 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records good. Diverts water for hydroelectric plant from Waiahulu Stream and Koze River 3 miles above lower intake. Lower intake is on Waimea River 300 feet below power house and 1 mile below confluence with Waialae River. Flow regulated by head gates. Water used for irrigation in vicinity of Kekaha.

## Hanapepe River at Koula, near Eleele

Location.— Water-stage recorder, lat.  $21^{\circ}57'20''$ , long.  $159^{\circ}33'15''$ , just below junction with Manuahi Stream, 4 miles northeast of Eleele. Altitude, 150 feet, by barometer.

Drainage area.— 18.8 square miles.

Records available.— May 1917 to January 1921, December 1926 to June 1937. August 1910 to December 1915 at site half a mile upstream; (records not equivalent).

Average discharge.— 13 years (1917-20, 1927-37), 55.6 million gallons a day (86.0 second-feet).

Extremes.— Maximum discharge during year, 5,850 million gallons a day (8,590 second-feet) Mar. 19 (gage height, 8.59 feet), from rating curve extended above 2,500 million gallons a day; minimum, 14.4 million gallons a day (22.3 second-feet) Oct. 18.

1910-21, 1926-37: Maximum discharge, that of Mar. 19, 1937; minimum, 7.5 million gallons a day (11.6 second-feet) Dec. 15, 16, 1926.

Remarks.— Records for ordinary stages are good; those for Oct. 29 to Nov. 17 (computed on basis of records for stations on South Fork of Wailua River) and those for extremely high stages are poor. Hanapepe ditch diverts water from river 3 miles above station for irrigation in vicinity of Makaweli.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## ISLAND OF KAUAI

13

## Hanapepe ditch below intake, near Elelele

Location.— Water-stage recorder, lat.  $21^{\circ}58'55''$ , long.  $159^{\circ}32'05''$ , 1 mile below intake and  $\frac{7}{7}$  miles northeast of Elelele. Altitude, 500 feet, by barometer.

Records available.— March 1930 to June 1937.

Extremes.— Maximum discharge during year, 35 million gallons a day (54 second-feet) July 25 (gage height, 3.68 feet); no flow occasionally, when water was turned out of ditch.

1930-37: Maximum discharge, 41 million gallons a day (63 second-feet) Nov. 12, 1931 (gage height, 3.98 feet); no flow occasionally, owing to closing of head gates.

Remarks.— Records good except those for Nov. 4-16, which were computed on basis of records for Hanapepe ditch at Koula and are fair. Ditch diverts water from Hanapepe River for irrigation in vicinity of Makaweli.

## ISLAND OF KAUAI

## Hanapepe ditch at Koula, near Eleele

Location. - Water-stage recorder, lat.  $21^{\circ}57'10''$ , long.  $159^{\circ}33'00''$ , at first flume below siphon at Koula, 3 miles below intake and 4 miles north of Eleele. Altitude, 490 feet, by barometer.

Records available. - January 1910 to June 1921, March 1927 to June 1937.

Average discharge. - 20 years (1910-20, 1927-37), 25.7 million gallons a day (39.8 second-feet).

Extremes. - Maximum discharge during year, 38.5 million gallons a day (59.6 second-feet)

Mar. 19 (gage height, 3.18 feet); no flow occasionally, when head gates were closed for channel repairs.

1910-21, 1927-37: Maximum discharge, that of Mar. 19, 1937; ditch occasionally dry owing to closing of head gates.

Remarks. - Records good except those for July 12 to Aug. 24, computed on basis of records for Hanapepe ditch at intake, which are fair. Diverts water from Hanapepe River 3 miles above station for irrigation in vicinity of Makaweli. Flow regulated by head gates.

## South Fork of Wailua River near Lihue

Location.— Water-stage recorder, lat.  $22^{\circ}02'10''$ , long.  $159^{\circ}22'55''$ , a third of a mile above Wailua Falls and 5 miles north of Lihue. Altitude, 230 feet, by barometer.

Drainage area.— 22.4 square miles.

Records available.— December 1911 to June 1937. December 1911 to November 1918 at site a third of a mile upstream.

Average discharge.— 15 years (1921-24, 1925-37), 70.1 million gallons a day (108 second-feet).

Extremes.— Maximum discharge during year, 14,200 million gallons a day (22,000 second-feet) May 2 (gage height, 8.77 feet), from rating curve extended above 10,000 million gallons a day; minimum, 2.4 million gallons a day (3.7 second-feet) July 1.

1911-37: Maximum discharge, 29,000 million gallons a day (44,900 second-feet) Jan. 16, 1920 (gage height, 11.25 feet), from rating curve extended above 10,000 million gallons a day; minimum, 1.2 million gallons a day (1.9 second-feet) May 3, 1926.

Remarks.— Records good except those for extremely high stages, which are poor. Lihue and Hanamaua ditches divert water above station at altitudes of 600 and 500 feet, respectively, for irrigation in vicinity of Lihue.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## North Fork of Wailua River at altitude 650 feet, near Lihue

Location.— Water-stage recorder, lat.  $22^{\circ}03'50''$ , long.  $159^{\circ}26'20''$ ,  $1\frac{1}{2}$  miles above intake or Kanaha ditch and  $7\frac{1}{2}$  miles northwest of Lihue. Altitude, 650 feet, from topographic map.

Drainage area.— 6.6 square miles.

Records available.— August to December 1910, September 1914 to June 1937. December 1910 to September 1914 at site 300 feet below confluence of main and east branches; records not equivalent.

Average discharge.— 16 years (1921-37), 51.7 million gallons a day (80.0 second-feet).

Extremes.— Maximum discharge during year, 3,720 million gallons a day (5,760 second-feet) Mar. 19 (gage height, 8.67 feet), from rating curve extended above 600 million gallons a day and slope measurement of 2,250 million gallons a day; minimum, 6.5 million gallons a day (10.1 second-feet) July 1.

1910-37: Maximum discharge, that of Mar. 19, 1937; minimum unknown, owing to water surface dropping below intake to gage well; minimum daily-discharge 1.6 million gallons a day (2.5 second-feet), estimated, May 23-25, 28, 1936.

Remarks.— Records for ordinary stages are good; those for Sept. 18-22 which were computed on basis of gage readings, are fair; those for high stages are poor. Since 1925 Hanalei tunnel has discharged water into river, and North Wailua and Stable storm ditches have diverted water above station for irrigation in vicinity of Lihue.

\*Partly estimated.

## Hanalei tunnel outlet near Lihue

Location. - Water-stage recorder, lat.  $22^{\circ}05'10''$ , long.  $159^{\circ}28'15''$ , at end of Hanalei tunnel,  $2\frac{1}{4}$  miles below intake on Kaapoko Stream and  $9\frac{1}{4}$  miles northwest of Lihue. Altitude, 1,210 feet, by Lihue Plantation Co. levels.

Records available. - July 1932 to June 1937.

Extremes. - Maximum discharge during year, 78 million gallons a day (121 second-feet) Mar. 19 (gage height, 1.83 feet); no flow at times when water was shut out of ditch.

1932-37: Maximum discharge, that of Mar. 19, 1937; no flow occasionally, when water was shut out of ditch.

Remarks. - Records good. Tunnel diverts water from Kaapoko Stream and Hanalei River and empties it into north branch of North Fork of Wailua River, from which it is later diverted and used for irrigation in vicinity of Lihue and Kapaa. Flow regulated by spillway and head gates.

## ISLAND OF KAUAI

## North Wailua ditch near Lihue

Location.— Water-stage recorder, lat.  $22^{\circ}03'40''$ , long.  $159^{\circ}27'55''$ , 300 feet below intake diversion dam on North Fork of Wailua River, 8 miles west of Wailua, and  $8\frac{1}{2}$  miles northwest of Lihue. Zero of gage is 1,105.45 feet above mean sea level, by Lihue Plantation Co. levels.

Records available.— July 1932 to June 1937. Records for 1926 to June 1932 obtained by Lihue Plantation Co.

Extremes.— Maximum discharge during year, 50 million gallons a day (77 second-feet) July 1 (gage height, 1.41 feet); minimum, no flow for periods of a few hours each when water was diverted around station.

1932-37: Maximum discharge, 59 million gallons a day (91 second-feet) Feb. 25, 1935 (gage height, 1.57 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records good. Flow regulated by gates. No diversions. Water used for power and irrigation in vicinity of Lihue.

## Stable storm ditch near Lihue

Location. - Water-stage recorder, lat.  $22^{\circ}04'00''$ , long.  $150^{\circ}26'45''$ , 100 feet below intake, 7.8 miles northwest of Lihue, and 8.2 miles west of Kapaa.

Records available. - December 1936 to June 1937. Records for April 1931 to December 1936 obtained by Lihue Plantation Co. at staff gage at site, 1 mile downstream.

Extremes. - Maximum discharge during period, 38 million gallons a day (59 second-feet) June 27 (gage height, 1.49 feet); no flow at times when water was shut out of ditch.

Remarks. - Records good. Diverts water from North Fork of Waialua River for irrigation of sugarcane in vicinity of Lihue. Flow regulated by head gates.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Kanaha ditch near Lihue

Location. - Water-stage recorder, lat. 22°03'50", long. 159°25'30", 750 feet below intake and 7 miles northwest of Lihue. Altitude, 540 feet, by barometer.

Records available. - August 1910 to June 1937.

Average discharge. - 17 years (1916-22, 1926-37), 8.22 million gallons a day (12.7 second-feet).

Extremes. - Maximum discharge during year, 19.5 million gallons a day (30.2 second-feet) Oct. 19 (gate height, 0.73 foot); no flow Oct. 28, Feb. 1, Mar. 31, May 3, 4, when intake gate was closed.

1910-37: Maximum discharge recorded, 45 million gallons a day (70 second-feet) Dec. 24, 1927 (gate height, 3.22 feet, former site and datum); no flow occasionally, when water was shut out of ditch.

Remarks. - Records good. Ditch diverts water from North Fork of Waimea River for irrigation of sugarcane in vicinity of Lihue. Flow regulated by head gate.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Wailua ditch near Kapaa

Location. - Water-stage recorder, lat.  $22^{\circ}04'25''$ , long.  $159^{\circ}24'05''$ , 2,000 feet below Wailua Reservoir,  $5\frac{1}{4}$  miles west of Kapaa, and 7 miles north of Lihue. Altitude,  $462 \pm 5$  feet, by estimating slope of 2,000 feet of length of ditch from Lihue Plantation Co. levels.

Records available. - November 1936 to June 1937. Records obtained by East Kauai Water Co. July 1922 to April 1932 at site 2 miles upstream below intake, and April 1932 to November 1936 at present site.

Extremes. - Maximum discharge during period, 45 million gallons a day (63 second-feet) June 5 (gage height, 3.54 feet); minimum, 0.7 million gallons a day (1.1 second-feet) Dec. 16, 17.

Remarks. - Records excellent. Diverts water from North Fork of Wailua Stream to reservoir 2,000 feet above station for irrigation of sugarcane. Flow regulated by gates at reservoir.

## East Branch of North Fork of Wailua River near Lihue

Location.— Water-stage recorder, lat.  $22^{\circ}04'10''$ , long.  $159^{\circ}25'05''$ , 1,200 feet above confluence with North Fork and  $\frac{7}{8}$  miles northwest of Lihue. Altitude, 500 feet, by barometer.

Drainage area.— 6.2 square miles.

Records available.— July 1912 to June 1937.

Average discharge.— 17 years (1920-37), 31.9 million gallons a day (49.4 second-feet).

Extremes.— Maximum discharge during year, 2,280 million gallons a day (3,500 second-feet) Dec. 28 (gage height, 9.83 feet), from rating curve extended above 500 million gallons a day; minimum, 11.0 million gallons a day (17.0 second-feet) July 3.

1912-37: Maximum discharge, 3,340 million gallons a day (5,170 second-feet) Dec. 24, 1927 (gage height, 10.57 feet). from rating curve extended above 500 million gallons a day; minimum, 4.4 million gallons a day (6.8 second-feet) July 3, 13, 1926.

Remarks.— Records good except those for extremely high stages, which are poor. No diversions above station.

## Kapaa River at Kapahi ditch intake, near Kapaa

Location. - Water-stage recorder, lat.  $22^{\circ}06'05''$ , long.  $159^{\circ}22'30''$ , 4 miles northwest of Kapaa and 4.5 miles northwest of Wailua. Altitude, 365 feet, by barometer.

Drainage area. - 3.3 square miles.

Records available. - December 1936 to June 1937. July 1910 to May 1915 at site half a mile upstream, known as "Kapaa River at Kapaa." June 1915 to April 1920 at site three-quarters of a mile upstream, known as "Kapaa River near Kealia."

Extremes. - Maximum discharge during year, 3,390 million gallons a day (5,250 second-feet) Mar. 19 (gage height, 4.50 feet), from rating curve extended above 400 million gallons a day; no flow when low flow is diverted into Kapahi ditch.

Remarks. - Records good except those above 400 million gallons a day, which are poor. Entire low flow is diverted into several ditches above station. Records for July 1 to Dec. 14 furnished by East Kauai Water Co.

Rating table, fiscal year 1936-57 (gage height, in feet, and discharge, in million gallons a day)

## ISLAND OF KAUAI

## Kapahi ditch near Kealia

Location.— Water-stage recorder, lat.  $22^{\circ}06'00''$ , long.  $159^{\circ}22'30''$ , 500 feet below intake and  $4\frac{1}{2}$  miles northwest of Kealia. Altitude, 360 feet, by barometer.

Records available.— April 1909 to May 1914, May 1915 to June 1937.

Average discharge.— 19 years (1917-20, 1921-37), 6.94 million gallons a day (10.7 second-feet).

Extremes.— Maximum discharge during year, 104 million gallons a day (161 second-feet) Sept. 26 (gage height, 1.85 feet); no flow occasionally, when water was shut out of ditch.

1909-14, 1915-37: Maximum discharge, 233 million gallons a day (361 second-feet) Mar. 31, 1923 (gage height, 3.15 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records for ordinary stages are good; those for Nov. 24-26, which were determined from field notes made during construction of Parshall flume, are fair. Ditch diverts water from Kapaa River for irrigation in vicinity of Kapaa. Flow regulated by head gates.

### Makaleha ditch near Kealia

Location.— Water-stage recorder, lat.  $22^{\circ}06'55''$ , long.  $159^{\circ}02'00''$ , at end of last tunnel from which water spills down slope into Mimino Reservoir, 3.9 miles northwest of Kealia and 4.1 miles northwest of Kapaa.

Records available.— December 1936 to June 1937. Equivalent records for July 1925 to November 1936 obtained by East Kauai Water Co. at site 150 feet downstream.

Extremes.—Maximum discharge during period, 16.3 million gallons a day (25.2 second-feet) Apr. 20 (gage height, 2.09 feet); minimum, 0.03 million gallons a day (0.05 second-foot) several days during November, December, and January.

Remarks.- Records good. Diverts water from Makaleha Stream for irrigation of sugar-cane. Flow regulated by gates at intake and wastewater 1 mile upstream.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## ISLAND OF KAUAI

## Anahola River near Kealia

Location.— Water-stage recorder, lat. 22°08'55", long. 159°21'20", just above intake of Lower Anahola ditch, 4½ miles northwest of Kealia. Altitude, 220 feet, by barometer.

Drainage area.— 5.5 square miles.

Records available.— August to November 1910, December 1912 to June 1937.

Average discharge.— 18 years (1919-37), 13.4 million gallons a day (20.7 second-feet).

Extremes.— Maximum discharge during year, 3,580 million gallons a day (5,540 second-feet) Mar. 19 (gage height, 7.72 feet), from rating curve extended above 300 million gallons a day; minimum, 3.9 million gallons a day (6.0 second-feet) Oct. 18, 19.

1910, 1912-37: Maximum discharge, that of Mar. 19, 1937, from rating curve extended above 300 million gallons a day; minimum, 1.4 million gallons a day (2.2 second-feet) Sept. 12, 13, 1923.

Remarks.— Records good for ordinary stages; those for June 22-30 (computed on basis of records for stations on nearby streams) and those for high stages are poor. Anahola ditch diverts water 3 miles above station for irrigation in vicinity of Kealia.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## ISLAND OF KAUAI

27

## Anahola ditch above Kaneha Reservoir, near Kealia

Location. - Water-stage recorder, lat.  $22^{\circ}08'00''$ , long.  $159^{\circ}22'30''$ , at point of discharge into Kaneha Reservoir, 5 miles northwest of Kealia. Altitude, 831 feet, by levels from Lihue Plantation Co. benchmark.

Records available. - May 1915 to June 1937.

Average discharge. - 14 years (1921-25, 1927-37), 3.49 million gallons a day (5.40 second-feet).

Extremes. - Maximum discharge during year, 45 million gallons a day (70 second-feet) Oct. 22 (gage height, 2.55 feet); no flow several days, when gates were closed.

1915-37: Maximum discharge recorded, 130 million gallons a day (201 second-feet) Jan. 16, 1921 (gage height, 6.25 feet, former site and datum); no flow occasionally, when water was shut out of ditch.

Remarks. - Records good except those for July 1, Aug. 23-28, computed on basis of records for nearby stations, which are poor. Ditch diverts water from Anahola River to Kaneha Reservoir, where it is stored for irrigation. Flow regulated by wastewater gates.

## ISLAND OF KAUAI

## Anahola ditch wasteway near Kealia

Location. - Water-stage recorder, lat.  $22^{\circ}08'10''$ , long.  $159^{\circ}22'30''$ , 300 feet below waste-way gates on Anahola ditch, 500 feet above Kāneha Reservoir, 3.8 miles west of Anahola, and 4.9 miles northwest of Kealia.

Records available. - December 1936 to June 1937.

Extremes. - Maximum discharge during year, 78 million gallons a day (121 second-feet) Mar. 19 (gage height, 2.42 feet); no flow on several days during year.

Remarks. - Records good. Water that passes station is returned to Anahola River. Records from July 1 to Nov. 30 furnished by East Kauai Water Co.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Lower Anahola ditch near Kealia

Location.— Water-stage recorder, lat.  $22^{\circ}08'00''$ , long.  $159^{\circ}19'30''$ , 100 feet below last wastewater, 1.3 miles southwest of mouth of Anahola River, and 2.5 miles northwest of Kealia. Altitude,  $271 \pm 5$  feet, by levels from approximate site of two demolished Geological Survey benchmarks.

Records available.— December 1936 to June 1937. Records obtained by East Kauai Water Co. July 1925 to January 1935 at site half a mile downstream and January 1935 to December 1936 at present site.

Extremes.— Maximum discharge during period, 16.5 million gallons a day (25.5 second-feet) Apr. 19 (gage height, 2.11 feet); no flow when water was turned out of ditch.

Remarks.— Records excellent. Water used for irrigation of sugarcane. Flow regulated by spillways and gates.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Ka Loko ditch near Kilauea

Location.— Water-stage recorder, lat.  $22^{\circ}10'35''$  long.  $159^{\circ}23'00''$ , 60 feet below junction of Ka Loko and Moloa'a ditches, 400 feet above Ka Loko Reservoir, and  $\frac{3}{4}$  miles southeast of Kilauea. Altitude, 750 feet, from topographic map.

Records available.— August 1932 to June 1937.

Extremes.— Maximum discharge during year, 106 million gallons a day (164 second-feet) Aug. 25 (gage height, 4.35 feet); minimum, 0.63 million gallons a day (0.98 second-foot) Dec. 13, 15.

1932-37: Maximum discharge, 108 million gallons a day (167 second-feet) Jan. 2, 1933 (gage height, 4.41 feet); minimum, 0.19 million gallons a day (0.29 second-foot) May 24, 1933.

Remarks.— Records excellent except those for Dec. 15-17, which were estimated and are fair. Ditch diverts water from Moloa'a and Puu Ka Ele Streams half a mile southeast and 1½ miles southwest of station, respectively. Flow regulated by wastewater gates. Water used for irrigation in vicinity of Kilauea.

## ISLAND OF KAUAI

31

## Puu Ka Ele ditch near Kilauea

Location.— Water-stage recorder, lat. 22°11'05", long. 159°24'20", 100 feet above Puu Ka Ele Reservoir and 2 miles south of Kilauea. Altitude, 430 feet, by barometer.

Records available.— August 1932 to June 1937.

Extremes.— Maximum discharge during year, 32 million gallons a day (50 second-feet) April 18 (gage height, 2.04 feet); no flow for several periods during year. 1932-37: Maximum discharge, 32 million gallons a day (50 second-feet) June 4, 1934, Dec. 9, 1935 (gage height, 2.05 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records excellent except those for Dec. 21-23, Jan. 25, Feb. 17-19, Mar. 31 to Apr. 4, June 16-19, 26-30, which were computed on basis of records for stations on Ka Loko and Kalihiwai ditches and are fair. Ditch diverts water from Puu Ka Ele Stream 1 mile southwest of station. Flow regulated by wastewater gate 100 feet above station. No diversions. Water used for irrigation in vicinity of Kilauea.

## Discharge, in million gallons, fiscal year July 1936 to June 1937

## Kalihiwai ditch near Kilauea

Location.— Water-stage recorder, lat.  $22^{\circ}10'55''$ , long.  $159^{\circ}25'55''$ , 0.1 mile above Kalihiwai Reservoir and 2.4 miles southwest of Kilauea. Altitude, 410 feet, by barometer.

Records available.— June 1934 to June 1937.

Extremes.— Maximum discharge during year, 63 million gallons a day (96 second-feet) Oct. 22 (gage height, 3.12 feet); minimum, 0.19 million gallons a day (0.29 second-foot) Sept. 10, 11, Jan. 9.

1934-37: Maximum discharge, that of Oct. 22, 1936; minimum, 0.01 million gallons a day (0.02 second-foot) Nov. 28, Dec. 4, 1934.

Remarks.— Records good except those for July 13-23, Aug. 7-28, Apr. 28 to May 6, which were computed on basis of records for nearby stations and are poor. Ditch diverts low-water flow from most branches of Pohakuhonu Stream at intakes, about 1 mile south of station. Diversion of flow to Kahililolo Stream, 0.1 mile above station, regulated by gates. Water discharges into Kalihiwai Reservoir, where it is stored for irrigation in vicinity of Kilauea.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Hanalei River at altitude 625 feet, near Hanalei

Location.— Water-stage recorder, lat. 22°07'10", long. 159°28'05", 0.4 mile below confluence with Kaapoko Stream and 6½ miles southeast of Hanalei. Altitude, 625 feet, from topographic map.

Drainage area.— 7.4 square miles.

Records available.— January 1914 to June 1937.

Average discharge.— 19 years (1916-37), 50.2 million gallons a day (77.7 second-feet).

Extremes.— Maximum discharge during year, 11,100 million gallons a day (17,200 second-feet) Mar. 19 (gage height, 10.82 feet) from rating curve extended above 200 million gallons a day; minimum, 8.7 million gallons a day (13.5 second-feet) July 1, 1914-37. Maximum discharge that of Mar. 19, 1937; minimum, 5.8 million gallons a day (9.0 second-feet) Apr. 28, May 1-3, 1926.

Remarks.— Records for ordinary stages are good; those for Dec. 27, 28, Jan. 3-5, 8-17, 21 (computed on basis of records for stations on nearby streams) and those for extremely high stages are poor. Since 1925 Hanalei tunnel has been diverting an average of about 20 million gallons a day from Kaapoko Stream and Hanalei River at points about 2 miles above station. Diverted water used for irrigation in vicinity of Lihue.

## Hanakapiai Stream near Hanalei

Location.— Water-stage recorder, lat.  $22^{\circ}11'20''$ , long.  $159^{\circ}35'50''$ ,  $1\frac{1}{2}$  miles above mouth of stream and 6 miles west of Hanalei. Altitude, 450 feet, by barometer.

Drainage area.— 2.6 square miles.

Records available.— December 1931 to June 1937.

Extremes.— Maximum discharge during year, 1,340 million gallons a day (2,070 second-feet) Mar. 18 (gage height, 6.31 feet), from rating curve extended above 60 million gallons a day; minimum, 4.2 million gallons a day (6.5 second-feet) Oct. 15-18.

1931-37: Maximum discharge, 1,780 million gallons a day (2,750 second-feet) Dec. 9, 1935 (gage height, 7.20 feet), from rating curve extended above 60 million gallons a day; minimum, 2.5 million gallons a day (3.9 second-feet) Jan. 16-19, Mar. 12, 13, 21, 22, 1934.

Remarks.— Records good for ordinary stages and poor for high stages. No diversions.

## MISCELLANEOUS DISCHARGE MEASUREMENTS

Measurements of streams and ditches on the island of Kauai at other than regular gaging stations are listed below:

Miscellaneous discharge measurements on Kauai, fiscal year July 1936 to June 1937

Date	Stream	Tributary to-	Locality	Discharge	
				Second- feet	Million gallons a day
Dec. 15	Opeakaa.....	Pacific Ocean...	500 feet above Opeakaa Falls at Nonou, near Kapaa.	9.41	6.08
Apr. 30	Maiakii ditch.	Mimimo Reservoir.	100 feet above Kealia power house forebay pipe and 4 miles northwest of Kealia.	10.9	7.04

## Right Branch of North Fork of Kaukonahua Stream, near Wahiawa

Location.— Water-stage recorder and masonry dam control, lat. 21°31'15", long. 157°56'55", 200 feet upstream from intake of Wahiawa Water Co.'s tunnel, which is just below confluence of right and left branches of North Fork of Kaukonahua Stream, and 8 miles northeast of Wahiawa. Altitude, 1,200 feet, from topographic map.

Drainage area.— 1.2 square miles.

Records available.— May 1913 to December 1932, February 1934 to June 1937.

Average discharge.— 18 years (1915-24, 1926-32, 1934-37), 7.95 million gallons a day (12.3 second-feet).

Extremes.— Maximum discharge during year, 698 million gallons a day (1,080 second-feet) Dec. 28 (gage height, 7.75 feet), from rating curve extended above 20 million gallons a day; minimum, 0.93 million gallons a day (1.44 second-feet) Dec. 1, 2, June 30. 1913-37: Maximum discharge, 1,160 million gallons a day (1,790 second-feet) Jan. 1, 1933 (gage height, 9.63 feet), from rating curve extended above 120 million gallons a day; minimum, 0.09 million gallons a day (0.15 second-foot) Mar. 22, 1926.

Remarks.— Records good for ordinary stages and poor for high stages. No diversions above station.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Left Branch of North Fork of Kaukonahua Stream, near Wahiawa

Location. - Water-stage recorder, lat.  $21^{\circ}31'10''$ , long.  $157^{\circ}56'55''$ , 100 feet upstream from intake of Wahiawa Water Co.'s tunnel, which is just below confluence of right and left branches of North Fork of Kaukonahua Stream, and 8 miles northeast of Wahiawa. Altitude, 1,200 feet, from topographic map.

Drainage area. - 1.5 square miles.

Records available. - May 1913 to June 1937.

Average discharge. - 20 years (1915-24, 1926-37), 11.5 million gallons a day (17.8 second-feet).

Extremes. - Maximum discharge during year, 2,380 million gallons a day (3,680 second-feet) Dec. 28 (gage height, 8.56 feet), from rating curve extended above 70 million gallons a day; minimum, 1.2 million gallons a day (1.9 second-feet) Dec. 1.

1913-37: Maximum discharge, 5,400 million gallons a day (8,360 second-feet) Jan. 1, 1933 (gage height, 11.7 feet, from floodmark on well), from rating curve extended above 15 million gallons a day; minimum, less than 0.1 million gallons a day (0.2 second-foot) June 15, 1931.

Remarks. - Records for ordinary stages are good; those for period of missing gage heights, Feb. 12-18, which were computed on basis of records for Right Branch of North Fork of Kaukonahua Stream, are fair; and those for high stages are poor. No diversions above station.

## ISLAND OF OAHU

## Puhawai Stream at Lualualei, near Waianae

Location.— Water-stage recorder, lat. 21°26'10", long. 158°08'00", in Lualualei Valley, 5 miles northeast of Waianae. Altitude, 600 feet, from topographic map.

Drainage area.— 0.6 square mile.

Records available.— September 1930 to June 1937.

Extremes.— Maximum discharge during year unknown due to faulty gage-height record; minimum, 0.01 million gallons a day (0.02 second-foot) Sept. 22, 23.

1930-37: Maximum discharge, 60 million gallons a day (93 second-feet) Feb. 21, 1932 (gage height, 3.58 feet); minimum, 0.01 million gallons a day (0.02 second-foot) Dec. 19, 20, 1931, Jan. 11, 1932, June 25, 26, 1935, Sept. 22, 23, 1936.

Remarks.— Records for ordinary stages are good; those for Oct. 21, Oct. 29 to Nov. 2, Jan. 1-22 (computed on basis of rainfall and records for stations on streams in Kaukonahua and Moanalua Valley) and those for high stages are poor. Continuous rainfall records are obtained at station.

## Discharge, in million gallons, fiscal year July 1936 to June 1937

## ISLAND OF OAHU

41

## Pearl Harbor Springs at Piukapu, near Pearl City

Location.— Water-stage recorder, lat.  $21^{\circ}23'20''$ , long.  $157^{\circ}58'10''$ , on left bank of stream, near levee, two-fifths of a mile from Pearl City and 8.9 miles (revised) northwest of Honolulu. Zero of gage is 0.5 foot (revised) below mean sea level.

Records available.— July 1931 to June 1937.

Extremes.— Not determined because extremes at gaging-station site are caused by changes in tidal backwater.

Remarks.— Records excellent. About a million gallons a day is occasionally diverted from stream. Surface run-off caused by floods not included in figures of discharge given below.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Pearl Harbor Springs at Kaluaoopu, near Pearl City

Location.— Water-stage recorder, lat. 21°23'30", long. 157°57'55", on left bank of stream, a fifth of a mile below Kamehameha Highway, 0.7 mile from Pearl City, and 8.7 miles (revised) northwest of Honolulu. Zero of gage is 0.90 foot below mean sea level.

Records available.— August 1931 to May 1937 (discontinued).

Extremes.— Not determined because extremes at gaging-station site are caused by changes in tidal backwater.

Remarks.— Records good except those for periods of missing gage heights, Nov. 26 to Dec. 2, Dec. 4-7, Feb. 13-16, May 5, which were computed on basis of records for other Pearl Harbor Springs stations and are fair. No diversions. Surface run-off caused by floods not included in figures of discharge given below.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Pearl Harbor Springs at Waiau, near Pearl City

Location.— Water-stage recorder, lat.  $21^{\circ}23'25''$ , long.  $157^{\circ}57'40''$ , on left bank of Waiau Stream, a fifth of a mile below Kamehameha Highway, 0.8 mile from Pearl City, and 8.5 miles northwest of Honolulu (mileage revised). Zero of gage is 0.74 foot below mean sea level.

Records available.— May 1931 to June 1937.

Extremes.— Not determined because extremes at gaging-station site are caused by changes in tidal backwater.

Remarks.— Records excellent. A small pumping plant diverts water above station for irrigation. Surface run-off caused by floods not included in figure of discharge given below.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

1.8	2.8	2.1	7.9
1.9	4.3	2.2	9.9

## Pearl Harbor Springs at Kalauao, near Aiea

Location.— Water-stage recorder, lat.  $21^{\circ}23'00''$ , long.  $157^{\circ}56'50''$ , on left bank of Kalauao Stream, a quarter of a mile below Honolulu Plantation pump 6, 1.1 miles from Aiea, and 7.6 miles (revised) northwest of Honolulu. Zero of gage is 1.10 feet below mean sea level.

Records available.— March 1931 to June 1937.

Extremes.— Not determined because extremes at gaging-station site are caused by changes in tidal backwater.

Remarks.— Records good. When water is needed for irrigation of sugarcane, Honolulu Plantation pump 6 diverts about 7 million gallons of water a day as a high-lift pump or 9 million gallons a day as a low-lift pump. Surface run-off caused by flood not included in figures of discharge given below.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Moanalua Stream near Honolulu

Location.— Duplex water-stage recorder and sharp-crested weir and orifice control, lat. 21°23'30", long. 157°51'10", 5½ miles above mouth and 5.6 miles north of Honolulu post office (mileage revised). Zero of gage is 339.12 feet above mean sea level.

Drainage area.— 3.2 square miles.

Records available.— June 1926 to June 1937.

Average discharge.— 11 years (1926-37), 2,62 million gallons a day (4.05 second-feet).

Extremes.— Maximum discharge during year, 936 million gallons a day (1,450 second-feet) Aug. 12 (gage height, 7.82 feet), from rating curve extended above 40 million gallons a day based on weir formulas; no flow for several periods during year.

1926-37: Maximum discharge, 2,370 million gallons a day (3,670 second-feet) Nov. 18, 1930 (gage height, 11.58 feet), from rating curve extended above 40 million gallons a day based on weir formulas; no flow in dry weather.

Remarks.— Records for ordinary stages are good; those for periods of missing gage heights, Oct. 12-19, May 5-11, May 15 to June 22 (computed on basis of records for stations on adjacent streams) and those for high stages are poor. Continuous records of rainfall are obtained at station.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Kalihi Stream near Honolulu

Location.— Water-stage recorder, lat.  $21^{\circ}22'10''$ , long.  $157^{\circ}50'25''$ , at Kioi Pool, three-eighths of a mile upstream from Catholic Orphanage and 4.4 miles (revised) north of Honolulu post office. Zero of gage is 464.40 feet above mean sea level.

Drainage area.— 2.7 square miles.

Records available.— September 1913 to June 1937.

Average discharge.— 20 years (1916-20, 1921-37), 5.13 million gallons a day (7.94 second-feet).

Extremes.— Maximum discharge during year, 1,720 million gallons a day (2,660 second-feet) Jan. 1 (gage height, 11.00 feet), from rating curve extended above 220 million gallons a day by test on model of station site; minimum, 1,28 million gallons a day (1.98 second-feet) Dec. 20, 21.

1913-37: Maximum discharge, 10,900 million gallons a day (16,900 second-feet) Nov. 18, 1930 (gage height, 13.81 feet), from rating curve extended above 220 million gallons a day by test on model of station site; minimum, 0.06 million gallons a day (0.09 second-foot) Oct. 22, 1933.

Remarks.— Records good for ordinary stages, and fair for high stages; those for periods of missing gage heights, July 19 to Aug. 15, Feb. 5-16 which were computed on basis of records for stations on streams from the Waipao to the Kalihi, are poor. Work for domestic use diverted from stream above station.

## Nuuanu Stream below reservoir 2 wasteway, near Honolulu

Location.— Water-stage recorder, lat.  $21^{\circ}20'55''$ , long.  $157^{\circ}49'40''$ , on Pali road in upper Nuuanu Valley, a quarter of a mile below reservoir 2 wasteway and 3.5 miles (revised) from Honolulu post office. Zero of gage is 631.71 feet above mean sea level.

Drainage area.— 3.4 square miles.

Records available.— October 1913 to June 1937.

Average discharge.— 18 years (1917-20, 1922-37), 5.80 million gallons a day (8.97 second-feet).

Extremes.— Maximum discharge recorded during year, 1,220 million gallons a day (1,890 second-feet) Apr. 30 (gage height, 6.40 feet), from rating curve extended above 300 million gallons a day by test on model of station site; minimum, 4.6 million gallons a day (7.1 second-feet) July 1.

1913-37: Maximum discharge, 1,600 million gallons a day (2,480 second-feet) Jan. 16, 1921 (gage height, 8.74 feet, from floodmarks), from rating curve extended above 300 million gallons a day based on weir formulas; minimum, 0.06 million gallons a day (0.09 second-foot) Sept. 10, 11, 1925.

Remarks.— Records for ordinary stages are good; those for periods of missing gage heights, Oct. 28-30, Feb. 5-16 (computed on basis of records for stations on all other streams between the Waiomao and the Kalihii), and those for high stages are poor. Reservoirs 2, 3, and 4 (capacities, 21, 34, and 1,630 acre-feet, respectively) regulate flow. Board of Water Supply diverts ground water from tunnels in drainage area.

## West Branch of Manoa Stream near Honolulu

Location.— Water-stage recorder, lat.  $21^{\circ}19'50''$ , long.  $157^{\circ}48'15''$ , 75 feet above lower highway and 4 miles northeast of Honolulu post office. Zero of gage is 290.84 feet above mean sea level (Board of Water Supply benchmark).

Drainage area.— 1.1 square miles.

Records available.— August 1925 to June 1937. May 1913 to January 1921 at site 200 feet upstream.

Average discharge.— 18 years (1913-20, 1926-37), 2.92 million gallons a day (4.52 second-feet).

Extremes.— Maximum discharge during year, 821 million gallons a day (1,270 second-feet)

Oct. 28 (gage height, 5.20 feet), from rating curve extended above 35 million gallons a day by test on model of station site; minimum, 0.58 million gallons a day (0.90 second-foot) June 30.

1913-21, 1925-37: Maximum stage, 10.4 feet, Jan. 16, 1921, at former site and datum, from floodmarks (discharge, 2,100 million gallons a day or 3,250 second-feet, estimated), from rating curve extended above 40 million gallons a day; minimum discharge, about 0.05 million gallons a day (0.08 second-foot) Mar. 16, 22, 1926.

Remarks.— Records for ordinary stages are good; those for period of missing gage heights, Sept. 25 to Oct. 17 (computed on basis of graph plotted from staff gage-readings made twice daily or oftener and records for stations on all other streams from the Waipao to the Kalihi) and those for high stages are fair. No diversions above station.

## East Branch of Manoa Stream near Honolulu

Location. - Water-stage recorder and combined Parshall flume and concrete control, lat. 21°19'50", long. 157°48'10", just below highway bridge 400 feet upstream from confluence with West Branch of Manoa Stream, 4 miles northeast of Honolulu post office.

Zero of gage is 294.50 feet above mean sea level (Board of Water Supply benchmark).

Drainage area.- 1.0 square mile.

Records available.- May 1913 to January 1921, August 1925 to June 1937.

Average discharge.- 18 years (1913-20, 1926-37), 2.99 million gallons a day (4.63 second-feet).

Extremes.- Maximum discharge recorded during year, 236 million gallons a day (365 second-feet) Oct. 28 (gage height, 3.93 feet), from rating curve extended above 11 million gallons a day by test on model of station site; minimum discharge, 1.34 million gallons a day (2.09 second-feet) July 4, 5, 6.

1913-21, 1925-36: Maximum gage height, 10.4 feet, Jan. 16, 1921, at former site and datum, from floodmarks (discharge, 2,000 million gallons a day or 3,090 second-feet, estimated), from rating curve extended above 37 million gallons a day; minimum discharge, 0.4 million gallons a day (0.6 second-foot) June 7, 8, 1926.

Remarks. - Records for ordinary stages are good; those for period of missing gage heights, Sept. 3-24 (computed on basis of graph plotted from staff-gage readings made twice daily or oftener) and those for high stages are fair; those for Oct. 31 to Nov. 2, Jan. 1-4, Apr. 3-11, Apr. 27 to May 7 (computed on basis of records for stations on all other streams from the Waiomao to the Kalihi) are poor. Water is diverted from stream about 1,500 feet above station by East Manoa ditch.

## East Manoa ditch near Honolulu

Location.— Water-stage recorder, lat.  $21^{\circ}19'50''$ , long.  $157^{\circ}48'05''$ , 150 feet east of lower highway and gaging station on East Branch of Manoa Stream and 4 miles northwest of Honolulu post office. Zero of gage is 317.09 feet above mean sea level (Board of Water Supply benchmark).

Records available.— May 1915 to December 1916, January 1918 to January 1921, August 1925 to June 1937.

Average discharge.— 11 years (1926-37), 0.726 million gallons a day (1.12 second-feet).

Extremes.— Maximum discharge during year, 6.8 million gallons a day (10.5 second-feet) July 29 (gage height, 1.33 feet); minimum, 0.04 million gallons a day (0.06 second-foot) several days during year.

1915-16, 1918-21, 1925-37: Maximum discharge, about 26 million gallons a day (40 second-feet) Jan. 16, 1921 (gage height, 2.27 feet, fromer datum); no flow Aug. 26, 1927.

Remarks.— Records good except those for periods of missing gage heights, Aug. 17 to Sept. 4, Sept. 21-29, which were computed on basis of records for East and West Branches of Manoa Stream near Honolulu and are fair. Water diverted from East Manoa Stream about a quarter of a mile above station by means of crude stone dam.

## ISLAND OF OAHU

## Pukele Stream near Honolulu

Location.— Water-stage recorder and concrete control lat.  $21^{\circ}19'15''$ , long.  $157^{\circ}47'10''$ , 200 feet upstream from Palolo belt-road bridge, five-eighths of a mile above confluence of Pukele and Wai'oma Stream and 4½ miles east of Honolulu post office.

Zero of gage is 344.78 feet above mean sea level (Board of Water Supply benchmark).

Drainage area.— 1.2 square miles.

Records available.— June 1928 to June 1937. April 1912 to September 1913, above present site and just below Mahoe Springs.

Average discharge.— 11 years (1928-37), 1.47 million gallons a day (2.27 second-feet).

Extremes.— Maximum discharge during year, 331 million gallons a day (512 second-feet).

Oct. 28 (gage height, 4.68 feet), from rating curve extended above 15 million gallons a day by test on model of station site; minimum, 0.44 million gallons a day (0.68 second-foot) Oct. 20, 21.

1912-13, 1928-37: Maximum discharge, 1,680 million gallons a day (revised) (2,600 second-feet) Apr. 11, 1930 (gage height, 7.75 feet, from floodmarks), from rating curve based on model tests; minimum, 0.09 million gallons a day (0.14 second-foot) Dec. 7-13, 20, 21, 1933.

Remarks.— Records for ordinary stages are good; those for periods of missing gage heights, July 22-23, Oct. 29 to Dec. 1, Dec. 5-12, Dec. 17 to Jan. 7, Feb. 2-4, Feb. 7 to Mar. 16, Mar. 25-27 (computed on basis of records for stations on all other streams between the Wai'oma and Kalihii) and those for high stages are poor. A 2-inch pipe diverts water from stream above station.

## Waionao Stream above Pukela Stream, near Honolulu

Location.— Water-stage recorder and concrete control, lat.  $21^{\circ}19'10''$ , long.  $157^{\circ}46'45''$ , 300 feet west of road, 1 mile upstream from confluence of Waianae and Pukela Streams, and 5 miles east of Honolulu post office. Zero of gage is 373.49 feet above mean sea level (Board of Water Supply benchmark).

Drainage area.— 1.0 square mile.

Records available.— June 1928 to June 1937. April 1911 to December 1912 at highway bridge below present site.

Average discharge.— 11 years (1926-37), 1.30 million gallons a day (2.01 second-feet).

Extremes.— Maximum discharge during year, 393 million gallons a day (608 second-feet) May 1 (gage height, 4.94 feet), from rating curve extended above 5 million gallons a day by test on model of station site; minimum, 0.09 million gallons a day (0.14 second-foot) Oct. 18-20, Dec. 21, 23.

1911-12, 1928-37: Maximum discharge, 461 million gallons a day (713 second-feet) Apr. 11, 1930 (gage height, 6.27 feet), from rating curve based on weir formulas; no flow in extremely dry weather.

Remarks.— Records for ordinary and medium stages are good; those for periods of missing gage heights, July 13-15, Aug. 11, 12, 18, 25, 27, 29, 30, Oct. 31, Nov. 1, Nov. 22 to Dec. 2, Feb. 9-14 (computed on basis of records for stations on all streams between the Pukela and the Kalini) and those for very high stages are poor. Board of Water Supply diverts water from tunnels in drainage area.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## ISLAND OF OAHU

## Kahaluu Stream near Heeia

Location.— Water-stage recorder and Parshall flume, lat.  $21^{\circ}26'20''$ , long.  $157^{\circ}51'05''$ , 40 feet above intake of Libby ditch, half a mile above forest-reserve boundary, and 6.5 miles northwest of Heeia post office. Zero of gage is 357.22 feet above mean sea level (Wright, Harvey & Wright Engineering Co. levels).

Drainage area.— 0.4 square mile.

Records available.— October 1935 to June 1937.

Extremes.— Maximum discharge during year, 153 million gallons a day (237 second-feet) May 5 (gage height, 3.80 feet), from rating curve extended above 5 million gallons a day; minimum, 2.35 million gallons a day (3.64 second-feet) Sept. 3-5.

1935-37: Maximum discharge recorded, that of May 5; minimum recorded that of Sept. 3-5.

Remarks.— Records good except those for periods of missing gage heights, July 3 to Aug. 6, Aug. 12 to Sept. 3, Nov. 16-19, which were computed on basis of records for station on Waimea Stream and are fair. No diversion above station.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Waihee Stream near Heeia

Location.- Water-stage recorder and Parshall flume, lat.  $21^{\circ}27'05''$ , long.  $157^{\circ}51'35''$ , 70 feet above intake of Kihe ditch, 120 feet below forest-reserve boundary, and 4.1 miles northwest of Heeia post office. Zero of gage is about 193 feet above mean sea level.

Drainage area.- 1. square miles.

Records available.- December 1935 to June 1937.

Extremes.- Maximum discharge during year, unknown; minimum, 5.1 million gallons a day (7.9 second-feet) July 1-3.

1935-37: Maximum discharge, unknown; minimum, 4.9 million gallons a day (7.6 second-feet) Jan. 24, 25, 1936.

Remarks.- Records good except those for periods of missing gage heights, Aug. 23, 24, Aug. 27 to Sept. 3, Oct. 29, 30, Nov. 1, Dec. 28 to Jan. 2, Jan. 10-27, Jan. 30 to Feb. 3, May 2-15, which were computed on basis of records for station on Kahaluu Stream, and are fair. No diversions above station.

## Honokahau Stream near Honokahau

Location. - Water-stage recorder, lat. 20°57'45", long. 156°35'20", 1,000 feet above intake of Honokahau ditch and 5 miles southeast of Honokahau. Altitude, about 950 feet, by barometer.

Drainage area. - 4.2 square miles.

Records available. - March 1913 to September 1920, May 1922 to June 1937.

Average discharge. - 19 years (1916-20, 1922-37), 25.4 million gallons a day (39.3 second-feet).

Extremes. - Maximum discharge during year, 922 million gallons a day (1,430 second-feet)

May 2 (gage height, 5.87 feet), from rating curve extended above 150 million gallons a day; minimum, 10.9 million gallons a day (18.9 second-feet) July 2, 1918, Aug. 1913-20, 1922-37: Maximum discharge, 2,200 million gallons a day (3,400 second-feet) Feb. 13, 1924 (gage height, 7.92 feet), from rating curve extended above 100 million gallons a day; minimum, 6.2 million gallons a day (9.6 second-feet) June 30, 1926.

Remarks. - Records excellent for ordinary stages and poor for high stages. No diversions.

## Honokawai ditch near Lahaina

Location.— Water-stage recorder, lat. 20°56'00", long. 156°37'30", just below intake on Honokawai Stream, 2½ miles above Pioneer Mill Co.'s power house and 7½ miles northeast of Lahaina. Altitude, about 1,900 feet, from topographic map.

Records available.— July 1912 to June 1937. July 1912 to December 1917 at site half a mile downstream, on old ditch line. November 1918 to May 1921 at site 1½ miles downstream. Staff gage used from July 1912 to November 1918.

Average discharge.— 18 years (1919-37), 5.86 million gallons a day (9.07 second-feet).

Extremes.— 1912-32: Maximum discharge, 76 million gallons a day (118 second-feet) Aug. 11, 1929 (gage height, 2.17 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records of daily discharges since July 1932 furnished by Pioneer Mill Co. Ditch diverts water for power and irrigation from Honokawai Stream just above station. Flow regulated by head gates at intake.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Olowalu ditch near Olowalu

Location.— Water-stage recorder, lat. 20°49'40", long. 156°36'40", 114 feet above intake of pipe line to hydroelectric plant, 1½ miles northeast of Olowalu, and 7 miles east of Lahaina.

Records available.— August 1911 to June 1937. (January 1932 to October 1933, discharge determined by three stations about 1,000 feet below present site.)

Average discharge.— 19 years (1917-20, 1921-37), 4.75 million gallons a day (7.35 second-feet).

Extremes.— 1911-32: Maximum discharge, 18 million gallons a day (28 second-feet) Dec. 25, 1920 (gage height, 1.53 feet, former site and datum); no flow occasionally, when water was shut out of ditch.

Remarks.— Record of daily discharge furnished by Pioneer Mill Co. since January 1932. Intake in Olowalu Stream at elevation about 450 feet. Water used for power and irrigation. Flow regulated by head gates.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## ISLAND OF MAUI

## Oheo Stream below diversion dam, near Kipahulu

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}41'05''$ , long.  $156^{\circ}04'10''$ , below old diversion dam at altitude 1,550 feet, 2 miles northwest of Kipahulu and 2½ miles above mouth.

Drainage area.— 5.8 square miles.

Records available.— February 1927 to September 1929, December 1931 to June 1937.

Extremes.— Maximum discharge during year, 1,870 million gallons a day (2,890 second-feet) Dec. 29 (gage height, 10.30 feet), from rating curve extended above 400 million gallons a day; minimum recorded, 0.01 million gallons a day (0.02 second-foot) June 20-25.

1927-28, 1931-37: Maximum discharge, 6,190 million gallons a day (9,580 second-feet)

Jan. 4, 1933 (gage height, 11.95 feet), from rating curve extended above 450 million gallons a day; no flow during dry periods.

Remarks.— Records good for ordinary stages and poor for high stages. Discharge for July 1-17, Aug. 2 to Sept. 4 not computed because of insufficient data. Small quantity of water is diverted for domestic supply and for livestock.

## Right Branch of Kahalawe Stream near Kipahulu

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}41'05''$ , long.  $156^{\circ}03'00''$  at old ditch intake, 2 miles north of Kipahulu. Altitude, 1,100 feet.

Drainage area.— 0.1 square mile.

Records available.— February 1927 to April 1937.

Extremes.— Maximum discharge during period July 1936 to April 1937, 1,940 million gallons a day (3,000 second-feet) Apr. 29 (gage height, 15.74 feet), from rating curve extended above 30 million gallons a day; minimum, 0.9 million gallons a day (1.4 second-feet) July 2.

1927-37: Maximum discharge, that of Apr. 29, 1937; minimum, 0.15 million gallons a day (0.23 second-foot) Dec. 16, 1929.

Remarks.— Records for ordinary stages are good. Those for Aug. 8 to Sept. 4, Feb. 2 to Mar. 17 (computed on basis of records for stations on nearby streams) and those for high stages are poor. No diversions. Station destroyed by flood of Apr. 29.

## ISLAND OF MAUI

## Makapipi Stream near Nahiku

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}48'35''$ , long.  $156^{\circ}05'55''$ , 100 feet above highway crossing,  $1\frac{1}{4}$  miles south of Nahiku, and  $4\frac{1}{4}$  miles southeast of Keanae post office.

Drainage area.— 5.0 square miles.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. June 1930 to June 1932.

Extremes.— Maximum discharge during year, 884 million gallons a day (1,370 second-feet) Jan. 1 (gage height, 4.95 feet), from rating curve extended above 100 million gallons a day by tests on model of station site; minimum, 0.84 million gallons a day (1.30 second-feet) Dec. 8.

1932-37: Maximum discharge, that of Jan. 1, 1937; no flow occasionally during dry weather.

A higher stage may have been reached on Feb. 25, 1935.

Remarks.— Records good except those for Nov. 16-24, which were computed on basis of records for stations on nearby streams and are poor. Koolau ditch diverts water 1 mile above station for irrigation in central Maui.

## West Makapipi Spring near Nahiku

Location.- Water-stage recorder and Parshall flume, lat.  $20^{\circ}48'20''$ , long.  $156^{\circ}06'20''$ , half a mile above highway, 1.7 miles south of Nahiku, and 4 $\frac{1}{2}$  miles southeast of Keanae post office.

Records available.- July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. June 1881 to June 1932.

Extremes.- Maximum discharge during year, 2.45 million gallons a day (3.79 second-feet) Mar. 19 (gage height, 0.74 foot); minimum recorded, 0.38 million gallons a day (0.59 second-foot) Dec. 8 (gage height, 0.29 foot).

1932-37: Maximum discharge, 32 million gallons a day (50 second-feet) Feb. 25, 1935 (gage height, 2.93 feet), from rating curve extended above 1.5 million gallons a day by weir formulas; no flow during dry weather.

Remarks.- Records good. Discharge Nov. 23 to Dec. 7, Dec. 23 to Jan. 4, May 2-10, 12-16 computed on basis of hydrographic comparison with nearby stations, which are fair. No diversions.

## Hanawi Stream near Nahiku

Location. - Water-stage recorder, lat.  $20^{\circ}48'35''$ , long.  $156^{\circ}06'50''$ , 200 feet above Koolau ditch intake and trail, 1 $\frac{1}{2}$  miles southwest of Nahiku, and 4 $\frac{1}{2}$  miles southeast of Keanae.

Drainage area. - 0.8 square mile.

Records available. - January 1914 to January 1916, November 1921 to June 1937.

Average discharge. - 15 years (1922-37), 12.5 million gallons a day (19.3 second-feet).

Extremes. - Maximum discharge during year, 546 million gallons a day (845 second-feet) Mar. 21 (gage height, 7.06 feet), from rating curve extended above 150 million gallons a day; minimum, 2.6 million gallons a day (4.0 second-feet) Oct. 22, 23.

1914-16, 1921-37: Maximum gage height, about 20 feet during flood of Jan. 18, 1916, from floodmarks, (discharge not determined); minimum discharge, 1.2 million gallons a day (1.9 second-feet) Feb. 19, 1936.

Remarks. - Records for ordinary stages are good except those for Sept. 17-29, which were computed on basis of records for stations on nearby streams and are fair; those for extremely high and low stages are poor. No diversions. Water used for irrigation in central Maui.

## Hanawi Stream below Government Road, near Nahiku

Location. - Water-stage recorder and concrete control, lat.  $20^{\circ}49'15''$ , long.  $156^{\circ}06'25''$ , three-quarters of a mile southwest of Nahiku and 4 miles southeast of Keanae post office. Altitude, 500 feet, by barometer.

Drainage area. - 1.6 square miles.

Records available. - July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. January 1927 to June 1932.

Extremes. - Maximum discharge during year, 7,180 million gallons a day (11,100 second-feet) Mar. 21 (gage height, 9.54 feet), from rating curve extended above 20 million gallons a day; minimum, 10.2 million gallons a day (18.8 second-feet) Oct. 22, 23.

1932-37: Maximum discharge, that of Mar. 21, 1937; minimum, 8.2 million gallons a day (12.7 second-feet) Feb. 25, 26, 1936.

Remarks. - Records good for ordinary stages and poor for high stages. Entire flow of stream above station up to 25 million gallons a day is diverted by East Maui Irrigation Co.'s ditch at altitude 1,300 feet for irrigation in central Maui.

## Kapaula Stream near Nahiku

Location.— Water-stage recorder, lat. 20°48'50", long. 156°07'05", 40 feet above intake to Kōolau ditch, 300 feet above ditch trail, 1½ miles southwest of Nahiku and 4 miles southeast of Keanae.

Drainage area.— 0.2 square mile.

Records available.— November 1921 to June 1937.

Average discharge.— 15 years (1922-37), 10.6 million gallons a day (16.4 second-feet). Extremes.— Maximum discharge during year, 1,070 million gallons a day (1,660 second-feet)

Jan. 1 (gage height, 6.43 feet), from rating curve extended above 200 million gallons a day; minimum, 1.2 million gallons a day (2.0 second-feet) Oct. 21.

1921-37: Maximum discharge, 1,580 million gallons a day (2,410 second-feet) Feb. 25, 1935 (gage height, 7.83 feet); minimum, 0.2 million gallons a day (0.3 second-foot) Nov. 23-25, 1933.

Remarks.— Records good for ordinary stages and poor for extremely high and low stages. No diversions. Water used for irrigation in central Maui.

## Kapaula Stream below Government Road, near Nahiku

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}49'25''$ , long.  $156^{\circ}06'55''$ , 3,000 feet below highway, 1.3 miles southwest of Nahiku, and 3.8 miles from Keanae post office. Altitude, 620 feet, by barometer.

Drainage area.— 0.5 square mile.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. March 1927 to June 1932.

Extremes.— Maximum discharge during year, 632 million gallons a day (978 second-feet) Dec. 31 (gage height, 4.12 feet), from rating curve extended above 70 million gallons a day; minimum, 1.3 million gallons a day (2.0 second-feet) June 19, 21-24, 30.

1932-37: Maximum discharge, 782 million gallons a day (1,210 second-feet) Feb. 25, 1935 (gage height, 4.55 feet), from rating curve extended above 70 million gallons a day; minimum, 1.1 million gallons a day (1.7 second-feet) several days in August 1934 and January 1935.

Remarks.— Records for ordinary stages are good except those for Aug. 9-15, May 5, which were computed on basis of records for station on Wailaka Stream, and are fair; those for high stages are poor. Koolau ditch diverts water 4,000 feet above station for irrigation in central Maui.

## Koolau ditch at Nahiku weir, near Nahiku

Location.- Water-stage recorder, lat.  $20^{\circ}48'55''$ , long.  $156^{\circ}07'15''$ , between Kapaula and Waiohue Streams,  $3\frac{1}{2}$  miles southwest of Nahiku and 4 miles southeast of Keanae.

Records available.- February 1919 to June 1937.

Average discharge.- 18 years (1919-37), 20.6 million gallons a day (31.9 second-feet).

Extremes.- Maximum discharge during year, 56 million gallons a day (87 second-feet) Mar. 21, May 2 (gage height, 1.62 feet); no flow Jan. 2, Feb. 20, May 22.

1919-37: Maximum discharge, 61 million gallons a day (94 second-feet) May 3, 1934 (gage height, 1.68 feet); no flow occasionally, when intake gates were closed.

Remarks.- Records excellent except those for extremely low stages, which are good. Flow regulated by spillways and gates. Koolau ditch diverts water at altitude 1,200 feet from nearly all streams from the Makapipi west to the Alo. Water used for irrigation in central Maui.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Waiaaka Stream near Nahiku

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}49'25''$ , long.  $156^{\circ}07'00''$ , 3,000 feet below Government Road,  $\frac{1}{4}$  miles west of Nahiku, and  $\frac{3}{4}$  miles southeast of Keanae post office. Station moved 40 feet downstream and datum lowered 5.49 feet in August 1936. Altitude, about 650 feet, by barometer.

Drainage area.— 0.1 square mile.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. March 1927 to June 1932.

Extremes.— Maximum discharge during year, 62 million gallons a day (96 second-feet) Mar. 21 (gage height, 2.92 feet, present datum), from rating curve extended above 20 million gallons a day by tests on model of station site; minimum, 0.38 million gallons a day (0.59 second-foot) Oct. 23.

1932-37: Maximum discharge 73 million gallons a day (113 second-feet) Mar. 6, 1933 (gage height, 1.87 feet, former datum), from rating curve extended above 1 million gallons a day by formula for V-notch weirs; minimum, 0.30 million gallons a day (0.46 second-foot) several days during October, November, 1933, April, May, June, 1934.

Remarks.— Records for ordinary stages are good; those for July 1-7, July 29 to Aug. 15, (computed on basis of records for stations on Kapaula and Paakea Streams) and those for high stages are poor. No diversions.

## Paakea Stream near Nahiku

Location.— Water-stage recorder, lat.  $20^{\circ}49'25''$ , long.  $156^{\circ}07'05''$ , 3,000 feet below highway,  $\frac{1}{2}$  miles west of Nahiku, and  $3\frac{1}{4}$  miles southeast of Keanae post office. Altitude, 650 feet, by barometer.

Drainage area.— 0.5 square mile.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. March 1927 to June 1932.

Extremes.— Maximum discharge during year, 234 million gallons a day (362 second-feet) May 2 (gage height, 5.48 feet), from rating curve extended above 25 million gallons a day; minimum, 2.1 million gallons a day (3.2 second-feet) Oct. 23, 24. 1932-37: Maximum discharge, that of May 2, 1937; minimum, 1.8 million gallons a day (2.8 second-feet) Feb. 18, 19, 1936.

Remarks.— Records good for ordinary stages and poor for medium and high stages; those for Jan. 8-19, Mar. 26-30, which were computed on basis of records for stations on Makapipi and Waiaka Streams, are fair. Koolau ditch diverts all low flow at altitude about 1,200 feet for irrigation in central Maui.

## Waiohue Stream near Nahiku

Location.- Water-stage recorder, lat.  $20^{\circ}49'05''$ , long.  $156^{\circ}07'40''$ , 200 feet above intake to Koolau ditch, 300 feet above ditch trail,  $2\frac{1}{4}$  miles southwest of Nahiku, and  $3\frac{1}{2}$  miles southeast of Keanae.

Drainage area.- 1.5 square miles.

Records available.- October 1921 to June 1937.

Average discharge.- 15 years (1922-37), 8.19 million gallons a day (12.7 second-feet).

Extremes.- Maximum discharge during year, 498 million gallons a day (771 second-feet) Jan. 1 (gage height, 5.42 feet), from rating curve extended above 75 million gallons a day; minimum, 2.7 million gallons a day (4.2 second-feet) Oct. 22, 23.

1921-37: Maximum discharge, 609 million gallons a day (942 second-feet) Feb. 25, 1935 (gage height, 6.16 feet), from rating curve extended above 75 million gallons a day; minimum, 1.4 million gallons a day (2.2 second-feet) Nov. 25, 1933.

Remarks.- Records for ordinary stages are excellent; those for July 1-16, May 30 to June 2 computed on basis of records for stations on all nearby streams and those for extremely high and low stages are poor. No diversions. Water used for irrigation in central Maui.

## East Wailuaiki Stream near Keanae

Location. - Water-stage recorder, lat. 20°49'05", long. 158°08'25", 1,000 feet above Koolau ditch crossing and trail and 3 miles southeast of Keanae post office.

Drainage area. - 3.7 square miles.

Records available. - December 1913 to October 1917, July 1922 to June 1937.

Average discharge. - 15 years (1922-37), 19.6 million gallons a day (30.3 second-feet).

Extremes. - Maximum discharge during year, 1,820 million gallons a day (2,820 second-feet) Jan. 1 (gage height, 7.87 feet); minimum, 2.8 million gallons a day (4.3 second-feet) Oct. 23.

1913-17, 1922-37: Maximum discharge, 2,020 million gallons a day (3,130 second-feet) Feb. 25, 1935 (gage height, 8.79 feet), from rating curve extended above 100 million gallons a day; minimum, 1.0 million gallons a day (1.6 second-feet) Oct. 22, 23, 1917, Aug. 1, 2, 1922.

Flood of Dec. 24, 1921, may have reached a higher stage, no data are available for this peak but owing to destruction of station.

Remarks. - Records good for ordinary stages; those for July 26 to Sept. 3 (computed on basis of records for stations on nearby streams) and those for high stages are poor. No diversions. Water used for irrigation in central Maui.

## West Wailuaiki Stream near Keanae

Location.— Water-stage recorder, lat. 20°49'20" long. 156°08'35", 500 feet above Koolau ditch crossing and trail bridge and 2½ miles south of Keanae post office.

Drainage area.— 3.6 square miles.

Records available.— January 1914 to October 1917, November 1921 to June 1937.

Average discharge.— 15 years (1922-37), 25.2 million gallons a day (39.0 second-feet).

Extremes.— Maximum discharge during year, 2,640 million gallons a day (4,080 second-feet) Jan. 1 (gage height, 10.51 feet), from rating curve extended above 500 million gallons a day; minimum, 2.7 million gallons a day (4.2 second-feet) Oct. 22, 23.

1914-17, 1921-37: Maximum discharge, 4,500 million gallons a day (6,960 second-feet), estimated, Jan. 14, 1923 (gage height, about 13.5 feet from floodmarks, from rating curve extended above 500 million gallons a day; minimum, 0.3 million gallons a day (0.5 second-foot) July 26, 1922.

Remarks.— Records for ordinary stages are good; those for July 16-18, July 21 to Aug. 17, Sept. 7-29, Feb. 27 to Mar. 19 (computed on basis of records for stations on nearby streams) and those for extremely high stages are poor.

## West Wailuanui Stream near Keanae

Location. - Water-stage recorder, lat.  $20^{\circ}49'40''$ , long.  $156^{\circ}08'55''$ , 150 feet above Koolau ditch crossing and intake and 2½ miles south of Keanae post office.

Drainage area. - 0.7 square mile.

Records available. - December 1913 to October 1917, July 1922 to June 1937.

Average discharge. - 15 years (1922-37), 9.41 million gallons a day (14.6 second-feet).

Extremes. - Maximum discharge recorded during year, 296 million gallons a day (458 second-feet) Aug. 11 (gage height, 3.65 feet), from rating curve extended above 100 million gallons a day; minimum discharge, 0.42 million gallons a day (0.65 second-foot) Oct. 23.

1913-17, 1922-37: Maximum discharge, 1,220 million gallons a day (1,890 second-feet) Jan. 14, 1923 (gage height, 7.70 feet), from rating curve extended above 100 million gallons a day; minimum, 0.2 million gallons a day (0.3 second-foot) July 16-21, 1922.

Remarks. - Records for Sept. 18-23 and Dec. 1 to May 12 (computed on basis of records for stations on nearby streams) and those for ordinary stages are fair; those for extremely high stages are poor. No diversions. Water used in central Maui for irrigation of sugarcane.

## Taro patch feeder ditch at Keanae

Location.— Water-stage recorder and Parshall flume, lat. 20°51'40", long. 156°09'00", 100 feet southeast of highway bridge over Piinaaua Stream, 4½ miles northwest of Nahiku, and 4½ miles southeast of Kailua.

Records available.— September 1934 to June 1937.

Extremes.— Maximum discharge during year, 5.2 million gallons a day (8.0 second-feet)

Mar. 21 (gage height, 1.22 feet), from rating curve extended above 17.8 million

gallons a day; minimum, 0.15 million gallons a day (0.23 second-foot) Jan. 5.

1934-37: Maximum discharge, 19.4 million gallons a day (30.0 second-feet) Feb.

25, 1935 (gage height, 2.86 feet), from rating curve computed by Parshall-Flume formula between 3.5 and 17.8 million gallons a day and extended above; minimum, 0.05 million gallons a day (0.08 second-foot) Feb. 28, 1935.

Remarks.— Records good except those for Feb. 3-8, Mar. 1-4, May 20-24, June 28-30, which were computed on basis of records for stations on nearby streams and are poor.

Water used in vicinity of Keanae for irrigation of taro.

## Koolau ditch near Keanae

Location. - Water-stage recorder, lat.  $20^{\circ}49'55''$ , long.  $156^{\circ}10'30''$ , on west side of Keanae Valley,  $\frac{2}{3}$  miles southwest of Keanae post office.

Records available. - January 1910 to December 1912 (staff gage), November 1917 to June 1937.

Average discharge. - 19 years (1918-37), 64.1 million gallons a day (99.2 second-feet).

Extremes. - Maximum discharge recorded during year, 172 million gallons a day (266 second-feet) Dec. 28 (gage height, 5.96 feet); minimum recorded, 31 million gallons a day (48 second-feet) Oct. 23.

1910-12, 1917-37: Maximum discharge, 175 million gallons a day (271 second-feet) Jan. 4, 1922 (gage height, 6.36 feet); no flow occasionally, when water was shut out of ditch.

Remarks. - Records good except those for Aug. 15 to Sept. 8, Nov. 9 to Dec. 13, which were computed on basis of records for Koolau ditch at Haipuena and are fair. Flow regulated by gates and spillways. Koolau ditch diverts water at altitude 1,200 feet from nearly all streams from the Makapipi west to the Alo for power and irrigation in central Maui. No diversion above station except that from several spillways.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Honomanu Stream near Keanae

Location.— Water-stage recorder, lat.  $20^{\circ}50'10''$ , long.  $156^{\circ}11'20''$ , 500 feet above Spreckels ditch intake and trail bridge and 3 miles by trail northwest of Keanae.

Drainage area.— 3.3 square miles.

Records available.— November 1913 to June 1937.

Average discharge.— 21 years (1916-37), 15.7 million gallons a day (24.3 second-feet). Extremes.— Maximum discharge during year, 1,530 million gallons a day (2,370 second-feet) Jan. 1 (gage height, 8.82 feet), from rating curve extended above 30 million gallons a day; minimum, 1.25 million gallons a day (1.93 second-feet) Oct. 23.

1913-37: Maximum discharge, 1,580 million gallons a day (2,440 second-feet) Feb. 25, 1935 (gage height, 8.98 feet), from rating curve extended above 30 million gallons a day; minimum, 0.08 million gallons a day (0.12 second-foot) Mar. 24, 1928.

Remarks.— Records good for ordinary stages and poor for high stages; those for Feb. 11 to Mar. 1 were computed on basis of records for stations on all nearby streams and are fair. No diversions. Water used for irrigation in central Maui.

## Haipuaena Stream near Huelo

Location.— Water-stage recorder, lat.  $20^{\circ}51'05''$ , long.  $156^{\circ}11'30''$ , 200 feet above inflow of Spreckels ditch and  $3\frac{1}{4}$  miles southeast of Kailua.

Drainage area.— 1.1 square miles.

Records available.— October 1913 to June 1937.

Average discharge.— 21 years (1916-37), 10.4 million gallons a day (16.1 second-feet).

Extremes.— Maximum discharge during year, 439 million gallons a day (679 second-feet).

Jan. 1 (gage height, 5.33 feet), from rating curve extended above 160 million gallons a day; minimum, 1.65 million gallons a day (2.55 second-feet) Oct. 24.

1913-37: Maximum discharge, 582 million gallons a day (900 second-feet) Feb. 17, 1929 (gage height, 6.25 feet), from rating curve extended above 160 million gallons a day; minimum, 0.3 million gallons a day (0.5 second-foot) frequently during December 1919 and Oct. 27-29, 1933.

Remarks.— Records excellent for ordinary stages and poor for high stages; those for Aug. 17-28, which were computed on basis of records for station on Puohokamoa Stream, are fair. No diversions. Water used for irrigation in central Maui.

## Spreckels ditch at Haipuaena weir, near Huelo

Location.— Water-stage recorder and sharp-crested weir, lat. 20°51'20", long. 156°11'25", on Spreckels ditch trail between Haipuaena and Puhokamoa Streams, 3½ miles southeast of Kailua.

Records available.— April 1922 to June 1937. February 1930 to October 1935 at site 100 feet upstream.

Average discharge.— 14 years (1922-29, 1930-37), 14.8 million gallons a day (22.9 second-feet).

Extremes.— Maximum discharge during year, 93 million gallons a day (144 second-feet) Dec. 29 (gage height, 2.25 feet); minimum, 1.40 million gallons a day (2.17 second-feet) Oct. 23.

1922-37: Maximum discharge, 139 million gallons a day (215 second-feet) Mar. 5, 1933 (gage height, 5.03 feet); no flow when water was turned out of ditch.

Remarks.— Records excellent. Flow regulated by gates and spillways. Spreckels ditch diverts from all streams between the Nuailua and the Kailua, above Koolau ditch east of the Puhokamoa and below Koolau ditch west of Puhokamoa. About 4 million gallons a day is diverted from ditch to East Maui Irrigation Co.'s hydroelectric plant at Kolea Gulch. Water used for irrigation in central Maui.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Koolau ditch at Haipuaena, near Huelo

Location.— Water-stage recorder and Parshall flume, lat. 20°51'15", long. 156°11'15", 1,000 feet above intake from Puhokamoa Stream and 3½ miles southeast of Kailua.

Records available.— April 1932 to June 1937.

Extremes.— Maximum discharge during year, 199 million gallons a day (308 second-feet) Aug. 4 (gage height, 4.93 feet); minimum, 16.9 million gallons a day (29.2 second-feet) Dec. 30.

1932-37: Maximum discharge, 200 million gallons a day (309 second-feet) Nov. 18, 1935 (gage height, 5.11 feet); no flow when water was shut out of ditch.

Remarks.— Records good except those for Aug. 12-17, 24-28, Sept. 21 to Oct. 9, which were computed on basis of records for Koolau ditch at Keanae, which are fair. Flow regulated by flood gates. No diversions. Water used for domestic supply and irrigation in central Maui.

## ISLAND OF MAUI

83

## Puuhokamoa Stream near Huelo

Location.- Water-stage recorder, lat. 20°51'20", long. 156°11'25", just above Spreckels ditch inflow and trail crossing, 3 miles southeast of Kailua.

Drainage area.- 2.6 square miles.

Records available.- December 1910 to June 1937. December 1910 to June 1913 from staff gage at site 550 feet downstream, June 1913 to May 1934 from recorder at site 500 feet downstream.

Average discharge.- 20 years (1917-37), 21.5 million gallons a day (33.3 second-feet).

Extremes.- Maximum discharge recorded during year, 1,200 million gallons a day (1,880 second-feet) Jan. 1 (gage height, 6.76 feet), from rating curve extended above 500 million gallons a day; minimum discharge, 3.7 million gallons a day (5.7 second-feet) Oct. 23, 24.

1910-37: Maximum discharge, 1,250 million gallons a day (1,930 second-feet) Feb. 26, 1935 (gage height, 7.09 feet), from rating curve extended above 500 million gallons a day; minimum, 0.1 million gallons a day (0.2 second-foot) Nov. 17, 1929, former site and datum.

Remarks.- Records good for ordinary stages and poor for high stages. Kula pipe line diverts small amount of water above station at altitude 4,300 feet for domestic use.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Manuel Luis ditch at Puohokamo Gulch, near Huelo

Location.— Water-stage recorder and sharp-crested weir, lat. 20°51'50", long. 156°11'00", In Puohokamo Gulch at lower portal of tunnel between Haipuaena and Puohokamo Streams, 3 miles southeast of Kailua.

Records available.— December 1917 to June 1937.

Average discharge.— 18 years (1918-24, 1925-37), 6.05 million gallons a day (9.36 second-feet).

Extremes.— Maximum discharge during year, 84 million gallons a day (130 second-feet) Jan. 1 (gage height, 3.49 feet); no flow Jan. 8.

1917-37: Maximum discharge, 116 million gallons a day (179 second-feet) Jan. 14, 1923 (gage height, 4.93 feet), from rating curve extended above 10 million gallons a day by weir and submerged-orifice formulas; no flow Jan. 8, 1937.

Remarks.— Records for low stages are good; those for July 1-10, Oct. 1-24, Apr. 6 (computed on basis of records for station on nearby ditches) and those for high stages are poor. Manuel Luis ditch is extension of Center ditch and picks up water at altitude 500 feet between the Kolea and the Waikamoi. Flow regulated by gates. Water used for irrigation in central Maui.

## Spreckels ditch at Wahinepee, near Huelo

Location.— Water-stage recorder and Parshall flume, lat.  $20^{\circ}51'25''$ , long.  $156^{\circ}11'20''$ , between Puohokamo and Alo Streams, 700 feet below intake at Puohokamo Stream,  $2\frac{1}{2}$  miles west of Keanae, and  $3\frac{1}{2}$  miles southeast of Kailua.

Records available.— August 1928 to June 1937. August 1928 to May 1934 at site 300 feet downstream.

Extremes.— Maximum discharge during year, 126 million gallons a day (195 second-feet) Dec. 29 (gage height, 3.71 feet); minimum, 0.03 million gallons a day (0.05 second-foot) June 1, 2.

1928-37: Maximum discharge, that of Dec. 29, 1936; no flow at times, due to regulation.

Remarks.— Records good except those for Aug. 18-28, Dec. 2-4, June 4-8 which were computed on basis of records for stations on nearby streams and are poor. Intake of Spreckels ditch is on Puohokamo Stream just below intake of Koolau ditch, and for ordinary stages it takes all water which passes Koolau ditch intake. Water used for irrigation in central Maui.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## ISLAND OF MAUI

## Waikamoi Stream above Wailoa ditch, near Huelo

Location.— Water-stage recorder, lat.  $20^{\circ}51'45''$ , long.  $156^{\circ}11'55''$ , 500 feet above intake of Wailoa ditch, a quarter of a mile above Spreckels ditch trail, and  $\frac{2}{3}$  miles southeast of Kailua.

Drainage area.— 4.4 square miles.

Records available.— January 1922 to June 1937.

Average discharge.— 15 years (1922-37), 15.7 million gallons a day (24.3 second-feet).

Extremes.— Maximum discharge during year, 3,380 million gallons a day (5,230 second-feet) Jan. 1 (gage height, 8.53 feet), from rating curve extended above 300 million gallons a day; minimum, 1.36 million gallons a day (2.10 second-feet) Oct. 23.

1922-37: Maximum discharge, 4,660 million gallons a day (7,210 second-feet) Oct.

16, 1924 (gage height, 10.45 feet), from rating curve extended above 300 million gallons a day; minimum, 0.4 million gallons a day (0.6 second-foot) Nov. 16, 1929.

Records.— Records for ordinary stages are good; those for July 3-20 (computed on basis of Records for stations on Alo, Kaiea, and Oopuola Streams) and those for high stages are poor. Haleakala ranch and Kula pipe lines divert small quantities of water above station. Water used for irrigation in central Maui.

## Kailua Stream near Huelo

Location. - Water-stage recorder, lat.  $20^{\circ}52'35''$ , long.  $156^{\circ}13'25''$ , above Wailoa ditch intake,  $1\frac{1}{4}$  miles southwest of Kailua and  $2\frac{1}{4}$  miles south of Huelo.

Drainage area. - 3.0 square miles.

Records available. - December 1910 to June 1918, July 1919 to June 1937.

Average discharge. - 18 years (1919-37), 18.0 million gallons a day (27.9 second-feet).

Extremes. - Maximum discharge, 3,980 million gallons a day (6,160 second-feet) Jan. 1 (gage height, 8.80 feet), from rating curve extended above 150 million gallons a day; minimum, 2.26 million gallons a day (3.48 second-feet) Oct. 23.

1910-18, 1919-37: Maximum discharge, that of Jan. 1, from rating curve extended above 150 million gallons a day; minimum, 0.07 million gallons a day (0.11 second-foot) June 27, 1921.

Remarks. - Records for ordinary stages are excellent; those for Aug. 9-14, Nov. 19 to Dec. 15, Dec. 20-28, Jan. 17 to Feb. 1 (computed on basis of records for stations on six nearby streams) and those for high stages are poor. No diversions above station. Water used for irrigation in central Maui.

## Honopou Stream near Huelo

Location. - Water-stage recorder, lat.  $20^{\circ}53'20''$ , long.  $156^{\circ}15'05''$ , just above Wailoa ditch intake,  $2\frac{1}{2}$  miles west of Huelo, and  $2\frac{1}{2}$  miles west of Kailua. Altitude, about 1,250 feet.

Drainage area. - 1.0 square mile.

Records available. - December 1910 to June 1937.

Average discharge. - 24 years (1911-14, 1916-37), 3.16 million gallons a day (4.89 second-feet).

Extremes. - Maximum discharge during year, 251 million gallons a day (388 second-feet) Dec. 29 (gage height, 3.83 feet), from rating curve extended above 70 million gallons a day; minimum, 0.70 million gallons a day (1.08 second-feet) Oct. 23, 24.

1910-37: Maximum discharge, 1,220 million gallons a day (1,890 second-feet) Nov. 18, 1930 (gage height, 7.28 feet), from rating curve extended above 70 million gallons a day; minimum, 0.01 million gallons a day (0.02 second-foot) several days in 1933 and 1934.

Remarks. - Records for ordinary stages are good; those estimated and those for high stages are poor. No diversions. Water used for irrigation in central Maui.

## Honopou Stream at Lowrie ditch siphon, near Huelo

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}54'50''$ , long.  $156^{\circ}15'10''$ , half a mile above Government Road and 1.7 miles west of Huelo.

Drainage area.— 2.0 square miles.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. April 1930 to June 1932.

Extremes.— Maximum discharge during year, 744 million gallons a day (1,150 second-feet) Mar. 21 (gage height, 4.51 feet), from rating curve extended above 100 million gallons a day; minimum, 0.07 million gallons a day (0.11 second-foot) July 4, 6, 7. 1932-37: Maximum discharge, that of Mar. 21, 1937; minimum, 0.04 million gallons a day (0.06 second-foot) Oct. 31, 1933.

Remarks.— Records good for ordinary stages and poor for high stages. Wailea and New Hamakua ditches divert most of flow above this station. Water used for irrigation in central Maui.

## Honopou Stream above Haiku ditch, near Huelo

Location.— Water-stage recorder and concrete control, lat.  $20^{\circ}55'05''$ , long.  $156^{\circ}14'55''$ , 150 feet below Government Road and  $\frac{1}{8}$  miles west of Huelo.

Drainage area.— 2.2 square miles.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. November 1926 to June 1932.

Extremes.— Maximum discharge during year, 250 million gallons a day (387 second-feet) Dec. 29 (gage height, 2.76 feet), from rating curve extended above 20 million gallons a day; minimum, 0.26 million gallons a day (0.40 second-foot) June 29-30.

1932-37: Maximum discharge, that of Dec. 29, 1936; minimum, 0.08 million gallons a day (0.12 second-foot) Dec. 1, 2, 1933.

Remarks.— Records for ordinary stages are good except those for July 15-20, 23-27, Aug. 29-31, Sept. 16-28, Sept. 30 to Oct. 5, Nov. 12-16, Jan. 10, 11, Feb. 11-15, which were computed on basis of records for Honopou Stream below Haiku ditch and at Lowrie ditch siphon and are fair; those for high stages are poor. Wailea and New Hamakua ditches divert most of flow above this station. Water used for irrigation in central Maui.

## Honopou Stream below Haiku ditch, near Huelo

Location.— Water-stage recorder and concrete control, lat.  $25^{\circ}55'06''$ , long.  $156^{\circ}14'50''$ , an eighth of a mile below Government Road and  $\frac{1}{8}$  miles west of Huelo.

Drainage area.— 2.3 square miles.

Records available.— July 1932 to June 1937. Records at same site obtained by East Maui Irrigation Co. November 1926 to June 1932.

Extremes.— Maximum discharge during year not determined due to faulty gage-height record; minimum, 0.08 million gallons a day (0.12 second-foot) Apr. 25. 1932-37: Maximum discharge recorded, 345 million gallons a day (534 second-feet) Dec. 31, 1932 (gage height, 3.43 feet), from rating curve extended above 50 million gallons a day; minimum discharge, 0.02 million gallons a day (0.03 second-foot) Nov. 27, 1933.

Remarks.— Records good for ordinary stages and poor for high stages. Wailoa, New Hamakua, and Haiku ditches divert most of flow above this station. Water used for irrigation in central Maui.

## Wailoa ditch at Honopou, near Huelo

Location.— Water-stage recorder, lat.  $20^{\circ}53'20''$ , long.  $156^{\circ}15'05''$ , 100 feet below intake at Honopou Stream, half a mile west of Lopi, and  $2\frac{1}{2}$  miles west of Kailua.

Records available.— November 1922 to June 1937.

Average discharge.— 14 years (1923-37), 113 million gallons a day (175 second-feet).

Extremes.— Maximum discharge during year, 171 million gallon gallons a day (265 second-feet) Aug. 11 (gage height, 5.62 feet); minimum recorded, 54 million gallons a day (84 second-feet) Oct. 23, 24.

1922-37: Maximum discharge, 173 million gallons a day (268 second-feet) Nov. 23, 1930 (gage height, 5.77 feet); minimum, 11 million gallons a day (17 second-feet) Feb. 12, 1932.

Remarks.— Records excellent. Wailoa ditch receives the water from Koolau ditch at Alo Stream and from all streams from the Alo west to the Halehaku at altitude of about 1,200 feet. Water used for irrigation in central Maui.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## New Hamakua ditch at Honopou, near Huelo

Location.— Water-stage recorder and sharp-crested weir, lat. 20°53'30", long. 156°15'10", 15 feet above tunnel portal, 600 feet below Honopu Stream crossing, and  $\frac{2}{3}$  miles west of Kailua.

Records available.— January 1918 to June 1937. January 1918 to May 1921 at site 300 feet upstream.

Average discharge.— 19 years (1918-37), 28.3 million gallons a day (43.8 second-feet).

Extremes.— Maximum discharge during year, 114 million gallons a day (176 second-feet) Dec. 29 (gage height, 6.07 feet); minimum, 0.76 million gallons a day (1.18 second-feet) Oct. 24.

1918-37: Maximum discharge, 143 million gallons a day (221 second-feet) Feb. 27, 1932 (gage height, 5.90 feet); no flow when water was shut out of ditch.

Remarks.— Records good. Discharge, Aug. 14-29, Sept. 18-30, Oct. 9-18, Dec. 5, 6 computed on basis of records for stations on nearby streams and gage heights at point below station, which are poor. New Hamakua ditch diverts water from streams between the Waikamoi and the Halehaku above Center and Lowrie ditches. Flow regulated by gates and spillways. Water used for irrigation in central Maui.

## Lowrie ditch at Honopou Gulch, near Huelo

Location. - Water-stage recorder and concrete control, lat.  $20^{\circ}54'55''$ , long.  $156^{\circ}15'05''$ , a quarter of a mile below siphon across Honopou Stream and  $1\frac{1}{2}$  miles northwest of Kailua.

Records available. - February 1930 to June 1937. January 1910 to March 1927 at site  $1\frac{1}{2}$  miles downstream.

Average discharge. - 23 years (1910-26, 1930-37), 34.5 million gallons a day (53.4 second-feet).

Extremes. - Maximum discharge during year, 88 million gallons a day (136 second-feet) Mar. 21 (gage height, 5.44 feet); no flow Oct. 13-17. 1930-37: Maximum discharge, that of Mar. 21, 1937; no flow at times.

Remarks. - Records excellent except those for Oct. 9-17, 21, 22, 29-31, Nov. 3 to Dec. 16, which were computed on basis of records for stations on nearby streams and daily gage readings are poor. Lowrie ditch diverts water at altitude of about 500 feet from all streams between the Kailua and the Halehaku. Flow regulated by gates. Water used for irrigation in central Maui.

Discharge, in million gallons, fiscal year July 1936 to June 1937

## Haiku ditch at Kapalalaea Gulch, near Huelo

Location. - Water-stage recorder, lat.  $20^{\circ}55'25''$ , long.  $156^{\circ}15'35''$ , in open section of ditch just below tunnel between Honopou and Kapalalaea Gulches,  $\frac{1}{4}$  miles northwest of Kailua.

Records available. - January 1910 to December 1928, February 1930 to June 1937. (January 1910 to October 1914 at site at Peahi weir on Old Haiku ditch; October 1914 to December 1928 at site at Manawai Gulch 2 miles downstream.)

Average discharge. - 25 years (1910-1928, 1930-37), 27.5 million gallons a day (42.5 second-feet).

Extremes. - Maximum discharge during year, 195 million gallons a day (302 second-feet) Mar. 23 (gage height, 5.80 feet); minimum, 0.45 million gallons a day (0.70 second-foot) June 24, 25.

1910-28, 1930-37: Maximum discharge, that of Mar. 23, 1937; no flow occasionally.

Remarks. - Records good except those for July 26 to Sept. 8, Sept. 12 to Oct. 26, Mar. 11, which were computed on basis of records for stations on nearby streams and are poor. Haiku ditch diverts water at altitude of about 250 feet from all streams between Kailua Stream and Maliko Gulch. Flow regulated by gates. Water used for irrigation in central Maui.

## Waiakea Stream at middle flume house, near Mountain View

Location.— Water-stage recorder, lat.  $19^{\circ}38'25''$ , long.  $155^{\circ}10'35''$ , at middle flume house, 800 feet above Olaa Sugar Co.'s main flume and  $\frac{7}{8}$  miles northwest of Mountain View.

Records available.— September 1930 to June 1937.

Extremes.— Maximum discharge during year, 144 million gallons a day (223 second-feet) Feb. 18 (gage height, 4.67 feet), from rating curve based on weir formulas; minimum, 2.15 million gallons a day (3.33 second-feet) Dec. 7.

1930-37: Maximum discharge, 149 million gallons a day (231 second-feet) July 21, 1931 (gage height, 4.70 feet), from rating curve based on weir formulas; no flow when tunnels and stream dry up.

Remarks.— Records for ordinary stages are good; those for July 1-19, (computed on basis of records for stations on all nearby streams) and those for high stages are poor.

No diversions. Large part of flow comes from three tunnels. Water is used for fluming sugarcane.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Wailuku River at Pukamaui, near Hilo

Location.— Water-stage recorder, lat.  $19^{\circ}42'45''$ , long.  $155^{\circ}09'40''$ , three-quarters of a mile above intake of Hilo Boarding School ditch and  $4\frac{1}{2}$  miles west of Hilo.

Drainage area.— 97.2 square miles.

Records available.— April 1923 to June 1929, July 1929 to March 1937 (discontinued).

Extremes.— Maximum discharge during period, 16,900 million gallons a day (26,100 second-feet) Feb. 17 (gage height, 16.9 feet, from floodmarks), from rating curve extended above 2,000 million gallons a day; minimum, 5.8 million gallons a day (9.0 second-feet) Dec. 7.

1923-28, 1929-37: Maximum discharge, that of Feb. 17, 1937; no flow when all water was diverted.

Remarks.— Records for ordinary stages are good except those for Dec. 24 to Jan. 4, Jan. 14-15, Feb. 14 to Mar. 5, which were computed on basis of records for Wailuku River above Hilo Boarding School ditch and are poor; those for high stages are also poor. Hilo Waterworks diverts water for domestic supply from pool at control. Flow regulated by this diversion.

## ISLAND OF HAWAII

## Wailuku River above Hilo Boarding School ditch intake, near Hilo

Location.— Water-stage recorder, lat.  $19^{\circ}42'55''$ , long.  $155^{\circ}09'10''$ , 1,000 feet above intake of Hilo Boarding School ditch, three-quarters of a mile west of Reservoir 1, and 4 miles west of Hilo.

Drainage area.— 124.5 square miles.

Records available.— July 1928 to June 1937.

Extremes.— Maximum discharge during year, 19,000 million gallons a day (29,400 second-feet) Feb. 17 (gage height, 22.2 feet), from rating curve extended above 3,500 million gallons a day; minimum, 13.8 million gallons a day (21.4 second-feet) Dec. 7.

1928-37: Maximum discharge, 21,000 million gallons a day (32,500 second-feet), estimated, July 21, 1931, from rating curve extended above 400 million gallons a day; minimum, 1.1 million gallons a day (1.7 second-feet) Jan. 9, 1934.

Remarks.— Records for ordinary stages are good; those for Dec. 30 to Jan. 7, Jan. 13-19, Mar. 30 to Apr. 16, June 17-25 (computed on basis of records for Wailuku River at Pukamaui) and those for high stages are poor. Flow regulated by head gates. Hilo Waterworks diverts about 1 million gallons a day for domestic supply from pool at Pukamaui, three-quarters of a mile upstream, and water passing station is used for power by Hilo Electric Light Co.

Rating table, fiscal year 1936-37 (gage height, in feet, and discharge, in million gallons a day)

## Hilo Boarding School ditch at intake, near Hilo

Location.— Water-stage recorder and Parshall flume, lat.  $19^{\circ}43'00''$ , long.  $155^{\circ}08'55''$ , 200 feet below intake diversion dam on Wailuku River and 3 $\frac{3}{4}$  miles northwest of Hilo.

Records available.— October 1931 to June 1937.

Extremes.— Maximum gage height during year, 8.62 feet (discharge greater than 21.5 million gallons a day, or 33.3 second-feet) Feb. 18; minimum discharge, 6.9 million gallons a day (10.7 second-feet) Nov. 24.

1931-37: Maximum discharge is beyond measuring capacity of station; no flow when water was shut out of ditch Nov. 23, 24, 1933.

Remarks.— Records of discharge below maximum capacity of Parshall-flume control (21.5 million gallons a day at gage height 2.5 feet) are excellent; those for May 25 to June 11, which were computed on basis of records for stations on Wailuku River, are good. Above gage height 2.5 feet the control is drowned by overflow from Wailuku river. Water is used for power by Hilo Electric Light Co.

\*Control drowned by overflow from Wailuku River for part of day.

†Control drowned by overflow from Wailuku River for entire day.

## Kapehu Stream at Piihonua, near Hilo

Location.— Water-stage recorder, lat. 19°43'15", long. 155°08'30", a quarter of a mile above confluence with Wailuku River and 3 miles west of Hilo.

Drainage area.— 4.9 square miles.

Records available.— November 1928 to January 1937 (discontinued).

Extremes.— Maximum discharge during period July 1936 to January 1917, 3,620 million gallons a day (5,600 second-feet) Dec. 23 (gage height 10.80 feet), from rating curve extended above 400 million gallons a day; minimum, 9.5 million gallons a day (14.7 second-feet) Dec. 7.

1928-37: Maximum discharge, 3,640 million gallons a day (5,630 second-feet) Aug. 12, 1930 (gage height, 9.98 feet), from rating curve extended above 400 million gallons a day; minimum, 1.2 million gallons a day (1.9 second-feet) Feb. 17, 1931.

Remarks.— Records good for low and medium stages and poor for extremely high stages. One small diversion above station for fluming sugarcane. Water passing station is used for power by Hilo Electric Light Co.

## Awini ditch at East Honokaneiki Gulch, near Niulihi

Location. - Water-stage recorder, lat.  $20^{\circ}09'55''$ , long.  $155^{\circ}43'10''$ , on Awini ditch at flume across East Honokaneiki Gulch,  $\frac{4}{5}$  miles southeast of Niulihi.

Records available. - October 1927 to June 1937.

Extremes. - Maximum discharge during year, 30.5 million gallons a day (47.2 second-feet) Aug. 3 (gage height, 3.57 feet); no flow for several periods during year.

1927-37: Maximum discharge, 34 million gallons a day (53 second-feet) Jan. 9, 1935 (gage height, 3.76 feet); no flow when ditch was dry or water was turned out.

Remarks. - Records fair except those for Sept. 21, Jan. 2-4, Jan. 16 to Feb. 1, Feb. 16-18, 20-26, Mar. 6-11, 20-26, Apr. 10-12, June 24-30, which were computed on basis of records for stations on all nearby streams and are poor. Awini ditch diverts water at altitude of about 2,000 feet from all streams between the Waikaloa and the Honokane. Flow regulated by head gates and spillways. Water used for irrigation in vicinity of Kohala.

## East Honokaneiki intake to Awini ditch at East Honokaneiki Gulch, near Niulii

Location.— Water-stage recorder, lat.  $20^{\circ}09'55''$ , long.  $155^{\circ}43'15''$ , on intake tunnel delivering water from East Honokaneiki Gulch to Awini ditch, on west side of gulch,  $\frac{4}{5}$  miles southeast of Niulii.

Records available.— October 1927 to December 1936.

Extremes.— Maximum discharge during period, 6.4 million gallons a day (9.9 second-feet) Aug. 3 (gage height, 1.25 feet); minimum, not known (record missing).

1927-37: Maximum discharge, 10.8 million gallons a day (16.7 second-feet) Mar. 27, Apr. 2, 1930 (gage height, 1.35 feet); no flow occasionally.

Remarks.— Records fair except those for Sept. 26 to Oct. 2, Oct. 27 to Nov. 17, which were computed on basis of records for Awini ditch at East Honokaneiki Gulch and are poor. Data insufficient to compute discharge after Dec. 21. Intake diverts water from East Honokaneiki Gulch to Awini ditch for irrigation in vicinity of Kohala. Flow regulated by head gates.

## Kohala ditch at Pololu, near Niulihi

Location.— Water-stage recorder, lat.  $20^{\circ}10'20''$ , long.  $155^{\circ}44'15''$ , on open section of ditch in Pololu Valley just below boundary between Bishop Estate land of Honokane and Territorial land of Pololu,  $2\frac{1}{4}$  miles above mouth of Pololu Stream and 4 miles south of Niulihi.

Records available.— August 1927 to June 1937.

Extremes.— Maximum discharge during year, 70 million gallons a day (108 second-feet) Aug. 3 (gage height, 4.06 feet); no flow Oct. 10-12, Jan. 12, 13.

1927-37: Maximum discharge, 76 million gallons a day (118 second-feet) Dec. 2, 1932 (gage height, 4.33 feet); no flow occasionally, when water was shut out of ditch.

Remarks.— Records good. Flow regulated by head gates. Kohala ditch receives flow of Awini ditch and diverts at altitude of about 1,200 feet from all streams west of the Honokane. Water is used for irrigation in vicinity of Kohala.

## ISLAND OF HAWAII

## Kehena ditch near Kohala

Location.— Water-stage recorder, lat. 20°07'25", long. 155°45'05", at old Honokane weir, near head of West Branch of Honokanenui Gulch, 8½ miles southeast of Kohala.

Records available.— December 1917 to November 1919, April 1928 to June 1937.

Extremes.— Maximum discharge during year, 39 million gallons a day (60 second-feet) Oct. 25 (gage height, 1.04 feet); no flow occasionally, when water was shut out of ditch. 1917-19, 1928-37: Maximum discharge, 86 million gallons a day (133 second-feet) Jan. 27, 1918 (gage height, 2.16 feet, former datum); no flow during dry periods.

Remarks.— Records good. Flow regulated by several gates above station. Intake is on Honokanenui Stream 2 miles above station, at altitude of about 4,200 feet. No diversions. Water used for irrigation in vicinity of Hawi.

## Discharge, in million gallons, fiscal year July 1936 to June 1937
