

# **Briefing Paper**

**Dr. Charles W. McMillion  
President, MBG Information Services**

**Prepared for  
The US-China Economic and Security Review Commission**

## **Hearing on Research and Development, Technological Advances in Key Industries, and Changing Trade Flows with China**

**385 Russell Senate Office Building  
July 16, 2008**

China's annual real GDP growth accelerated sharply and constantly after gaining admission to the World Trade Organization in January 2002. From 8.3% annual growth in 2001, China's GDP growth beginning in 2002 averaged 10.5% including growth of 11.9% in 2007. This is more than twice the growth rate of the global economy and four times the average 2.6% GDP growth in the US. Economists normally expect that countries growing faster than the world economy will have trade deficits while countries growing slower will have surpluses.

Although it is outside the scope of this Brief, it must be appreciated that consumer and investor demand growth in China since 2002 has been spectacular. Growth in industrial production since 2002 averaged 15.5% per year in China compared with US growth of 1.8%. From infrastructure and housing to motor vehicles, airplanes, mobile phones, computers, machine tools, financial and information services, leisure and hospitality, China's domestic spending has grown sharply.

Yet despite China's soaring growth, its current account surplus rocketed from \$17.4 billion, 1.3% of GDP, in 2001 to \$371.8 billion, 12.3% of GDP, in 2007. Over the past six years China has accumulated global current account surpluses of \$932 billion. Since 2004 China's global current account surpluses are substantially larger even than its surpluses in goods trade because China now has very substantial -- and rapidly rising -- net returns to its foreign investing and lending, and booming "transfer" earnings from crews of construction and other workers abroad.

The US current account deficit with China has tripled since 2001 to \$289.7 billion in 2007, and totals near -\$1.2 Trillion for the six years. US net payments to China for investments/loans and transfers have long been larger than the small (\$5.4 billion in 2007) US surplus in services trade.

But, like the unprecedented imbalance in goods trade, this imbalance is worsening rapidly as US debt-service obligations to China are soaring. In 2007, net US government payments to China -- mostly to service existing debt -- soared to almost \$40 billion, six times the amount just six years

earlier. Furthermore, all net US corporate receipts on direct investments in China totaled less than \$6 billion in 2007 -- less than one-sixth of US debt-service payments and only 2% of the US current account deficit with China.

China's \$212 billion in foreign currency reserves at the end of 2001 rocketed to \$1.76 trillion at the end of April 2008. During the month of April 2008, China's reserves grew by \$74.5 billion -- over \$100 million per hour. This strategic war chest may reach \$2 trillion before September with China's authorities shopping the world for patents, talent, natural resources, brands and political influence at a time when many key assets are being sacrificed at fire-sale prices. China's state-controlled and other major enterprises have also gained access to global equity and bond markets in recent years, providing them with trillions of additional dollars in potential financial resources with which to acquire key global assets.

Because of China's large net import of mineral fuels and ores (particularly iron ore) its global trade surplus in manufactured goods has long been larger than its surplus for all goods. China's global surplus for manufactured goods soared from \$30.9 billion in 2001 to \$401.4 billion in 2007 and appears on track to reach the unprecedented level of over \$500 billion in 2008.

Although skyrocketing import prices for mineral fuels and ores are reducing China's global surplus for all goods in 2008, China's surplus in manufacturing goods is up 34% through May.

China's manufacturing trade surplus has rocketed in recent years as it moved away from its historic role as a processing center -- merely assembling imported parts -- and has "localized" modern, dynamic supply chains in most industries. China has also dramatically shifted its manufacturing sector emphasis from more traditional to modern technology-driven industries.

Textiles and apparel accounted for all or most of China's global manufacturing surplus until 2004. But in 2007 China's rocketing surplus in electrical and non-electrical equipment (including computers) and parts surpassed the surplus for textiles/apparel and -- soaring by 60% so far in 2008 -- could have a surplus this year that is half-again as large as for textiles/apparel.

Trade flows now are being affected by a weakening US currency. But from China's admission to the WTO in January 2002 until June 2008, the dollar was allowed to fall by only -17% against the pegged Chinese Yuan while it fell -18% against the Japanese Yen and by -43% against the Euro. That is, during this time the Yuan has strengthened by 17% against the US dollar but it has weakened slightly against the Japanese Yen and weakened significantly against the Euro.

These changes in currency values together with China's strong set of trade and industrial policies have dramatically transformed China's economy and its trading patterns since 2001. China's auto production has almost quadrupled since 2001, surpassing Germany in 2006 as the world's 3rd largest producer. Continuing its rapid growth this year, China will likely surpass stagnant US and Germany production in 2009 to become the world's largest auto producer and could rapidly extend its leadership in coming years.

China's domestic auto sales have also soared since 2001 and China is now the world's 2nd leading auto market behind only the US. Yet China's auto and parts sector achieved a global

trade surplus in 2005 and that surplus is surging; by 83% last year and by 44% so far in 2008. Most important for anticipating developments over the next few years, China's auto surplus is now driven by its soaring global trade surplus in auto parts while its export of fully assembled vehicle remains relatively small but is expected to expand dramatically over the next three years.

China's market for aerospace -- especially for commercial airliners -- is also one of the fastest growing in the world. Yet rapid growth and modernization of domestic aerospace production continues to limit China's overall aerospace trade deficit while achieving a global surplus in aerospace parts in 2007 and again this year.

Information technology has been a focus of China's economic and trade modernization. China's production of computers rocketed past that of Japan in 2003 and that of the US in 2004 to become the world's ever-more dominant producer. Again, despite world-leading domestic sales growth of over 20% per year, the localization of IT component parts producers allowed China to increase its global surplus for computers and parts from \$8.1 billion in 2001 to \$73.5 billion in 2007 and to perhaps \$83 billion this year.

The ratio of China's computer and parts exports to imports soared from 2.6 in 2001 to 4.7 in 2007 indicating a sea change in value added. Similarly dramatic changes in patterns are evident throughout the IT sector including for cellular phones and mobile devices where China's global surplus soared from \$2.9 billion in 2003 to over \$50 billion in 2007 and likely will exceed \$60 billion this year.

Unprecedented and rapidly worsening US trade deficits with China are dominated by US deficits in almost all modern manufacturing industries. US manufacturing trade deficits with China from 2002 through estimated full-year 2008 will total over -\$1.3 trillion, about the same as for all goods. Aside from the US surplus with China in aerospace (Boeing passenger jets,) most US trade surpluses with China are for agricultural and mineral goods. Soybeans appear to have the largest US surplus with China this year.

The -\$256 billion US trade deficit with China in 2007 (a net loss of US production) cost the US almost two million jobs, one million more jobs than the China trade deficit cost in 2000.

One of the more important indicators of China's economic and trade modernization is the loss of the long-held US surplus in a dynamic category of products defined by the US Department of Commerce as our most Advanced Technology Products. Globally, the traditional US surplus in ATP turned to a deficit for the first time in 2002. Since then, the US has suffered ATP deficits that -- in nominal value -- are far larger than any past US ATP surplus. The US ATP deficits are also far larger than current US earnings abroad for all intellectual property -- royalties and fees.

Very large and worsening US trade deficits with China in ATP elements of machinery and electronics (including computers and other IT products) result in unprecedented US ATP trade deficits with China that more than account for the entire US global ATP deficit. With US import payments for ATP from China almost four times as much as export earnings, the US ATP deficit with China is more than eight times the US deficit with Japan. China now accounts for 27% of US ATP imports (by value) and for only 7% of US ATP exports.

A complete list of US/China ATP exports, imports and balances is included in the Appendix for the years 2000-2001 and 2006-2007.

Finally, it should be appreciated that the US no longer accounts for China's entire global trade and current account surplus. That is, until 2006, excluding its massive surplus with the US, China had a deficit with the rest of the world in traded goods and a deficit in current accounts until 2007. But because of currency movements and other factors, China's now has soaring surpluses with the EU-25 as well that more than offset China's large, politically instrumental deficits with Taiwan and other Asian neighbors.

The EU-25's deficit in traded goods with China has worsened sharply from -\$45.7 billion in 2001 to -\$216.2 billion in 2007. As with the US, China's surplus with the EU is almost entirely in manufactured goods dominated by modern machinery and electronics, including information technology products.

The enormous external imbalances in China's rapid economic and trade modernization now adversely threaten not only the US but the EU as well. This would seem to be an opportune time for bold, cooperative policies in the common interest.

---

### **US-China Advanced Technology Trade Exports, Imports and Balances 2000-2001 and 2006-2007 10-Digit HS Product Level**

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%

# US Advanced Technology Products Trade With China Before and After WTO Admission

The US deficit with China worsened 10-fold from 2001 to 2007 and the share of US products in surplus fell from 49% to 40%
