The Expanding Range of China's Conventional Missiles

Credited maximum range based on open source reporting, in miles and kilometers, shown in relation to Guam and other key regional points¹

¹ Distances to key regional points measured from nearest point on China's mainland (including Hainan), estimated using open source mapping software.

² Naval data measured in days under way required to move into missile range from nearest point on China's mainland (including Hainan), based on top speed and calculated in nautical miles.

³ Air data measured in distance from nearest point on China's mainland (including Hainan), based on bomber's maximum reported combat radius plus maximum missile range.
